>WHY would any director want to keep their vote on the issue secret?

I don't know; Tom has never declined to discuss his views or his votes with me. He knows I vote, too. :-)

There is only one valid reason I can see that the Board could choose not to air the votes of individual Directors. The Board has a policy that all Directors will support the final votes of the Board. Even those that voted against the S25 position, or would have seen it written differently, will support the end result, as part of an organization. I could see some difficulty in an individual Director saying "I voted against it, but I support the policy of the organization."

Of those that voted against it, it is still unknown why they did so. Did they feel it went too far, or not far enough? If I were on the Board (Director Hare -- does that have a ring to it, or what?), I may have voted against the proposal as written.

73,
Ed Hare, W1RFI

> this band is being systematically bootlegged by CB'ers seeking a
> cleaner, clearer, quieter venue for their activities.

Along the Gulf Coast from Texas to Florida the Shrimp Season is
getting ready to begin. Along with this activity comes the "Kitchen
Coastal" set ups and the indiscrimate use of 11/10 meters, 135 to 173
MHz, 220, 440 and The Good Lord only knows what else. The Explosion in
this
phenomena was spurred on by the proliferation of "Modifiable" Radios
which allow expanded frequency access. The Modifiable 2 meter radios
are the
most popular since they can cover the Marine Band with 50+ watts! I
have
heard commercial fishing activities as low as 136 MHz with the MARS/CAP
Band being popular since it "appears" to be a quiet area. The 2 meter
amateur band has its share of bootleggers but most activity seems to
be driven away by any legitimate activity (for the most part).

Some stuff is scrambled with simple inversion scramblers being
popular. The Marine Band (VHF) are a mess after the license requirements

were lifted. The Cowboys have taken over and the appearance of
no-enforcement has let radio cowboys run wild with the appearence of
Land Mobiles, Kitchen Coastals and boats with high powered Modified
Amateur Gear!

The Coast Guard is swamped and they don't have the time/resources to
police this problem and the FCC is basically throwing out the
Enforcement Letters to Amateurs and the bootlegger/freeband
crowd is ignored, or so it seems.

The simple fact is: Licensing kept the BS under control, the FCC
in the Name of "DEREGULATION" has let the Camel put his nose under
the tent and allowed "Licnesing by rule" to take place with no
method of accountability. (CREDIT TO HANS, K0HB, for the Camel story)

Congress should be the ones to be held accountable for this mess and
the morass they caused by cutting funding of the FCC in years past.
Since any monies FCC collects are put to the Federal Treasury and not
allocated to the FCC, there is no incentive to enforce any problem
areas unless political pressure is applied. Let the Fcc have a
portion of the Fines they collect and enforcement would have some
teeth.

>

After hanging around this group for a while, I get the impression that there are a number of Hams who:

Are angry that the code requirement was dropped to 5WPM
Are angry at the test formats
Are angry at Technicians
are angry at the ARRL
are angry at the FCC
are angry at CB'ers
are angry at Freeband

Seriously, unless anger is an integral aspect of their persona, why on earth take part in a hobby that distresses them so much? I wouldn't have any part of something when I hated it.

>recording this meeting. Vegas odd are 3 to 5 on LennieNoShow

The above is a prime example of truly juvenile posturing.
The Anonymous poster has no overt identity but can be
found out later if necessary. The demand to "meet" in
order to "prove" anything is worthless, bogus, indicative of
nothing but posting intimidation and a monumental ego
that defies rational discussion, debate, or argument.

There will not be any "welcome" to such an individual at
my home or anywhere else based on this idiot's demands
of physical confrontation.

There will be no "meeting" with an imaginary persona, an
alias, a work of fiction, a will 'o the wisp no more
tangible than a whiff of marsh gas.

If US amateur radio is based on such individual demands
of "showing" anything through physical intimidation, implied
or real, then it has passed beyond any reasonable "service"
to any citizenry, licensed or unlicensed.

2814. Re: Can we sue the ARRL? Yes we can.

apparently in need of writing a very very long counter-argument writes:

>Do the vast majority of users of the Citizens Band Radio Service, as it
>exists today, obey the rules of that service?

As far as I can tell, yes. :-)

Have there been any "official polls" taken to "prove" one way or the
other? If so, show the work.

Why does Miccolis ask? This is not the proper newsgroup to discuss
citizens band radio.

>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>example of how that Service should conduct itself?

No. There are far too few channels for the number of users based
on reception in the Greater Los Angeles region. That is a subjective
opinion based on the number of "heterodynes" heard on each of the
forty channels.

>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>example of how the Amateur Radio Service should be conducted?

No. Why would that even be a question, other than trolling? :-)

Would Miccolis hold up US amateur radio service as the "proper"
way to conduct citizens band radio service communications?
If so, why? Show the work.

Would Miccolis hold up US amateur radio service as the "proper"
way to conduct Public Safety Radio Services, Aviation Radio
Services, or Private Land Mobile Radio Services? If so, why?
Show the work.

>I wish to debate the methods used to derive conclusions. You don't want to
>debate. All you want to do, Len, is call names and repeat the same mistakes
>over and over.

Nope. I stated the source of my observations, gave some numbers.

From there on, Miccolis wanted a Battle To The Death in a newsgroup. :-)

>Your "belief" in something does not make it a fact. I know people who believe
>in the Easter Bunny, but their belief does not mean I must agree with them.

There is a common thread among long-timers here in which the True Beliefs of US amateur radio are stated as if reading from a hymnal. See also Standards and Practices of the 1930s and 1940s. Same book, different cover.

>Another example of faulty process on your part, Len. You lump together all
>classes of amateur license with any HF privileges at all, EXCEPT Techncians
>with HF. But there is a BIG difference between the minimal Novice HF
>privileges
>(tiny slices of four HF bands, and only one mode on three of those bands)
>granted and those of the General and higher classes. (Generals have all
>privileges on 5 of the 9 HF/MF amateur bands, and the majority of the
>spectrum
>in the other 4 bands. And they have all mode privileges. The other classes
>are even better).

A True Belief labels as heresy anything against the True Belief, therefore all who express such "heresy" are "faulty," "in error," or "mistaken."

I was simply observing tabulations of US amateur radio license class changes since the end of June 2000 to the end of March 2001. Miccolis considered this "faulty," "mistaken," "error," etc. because I did not include changes that were not available, not tabulated.

>You agree, then, that your work is faulty. OK. Why should anyone accept your
>faulty work?

No agreement on "faulty work." I gave my sources and numbers. From there on a True Believer came out with charges of "fault," "error," and "mistake." :-)

>I don't like analysis METHODS that are faulty. Such as counting months twice,
>which you did.

Nope. Was counting only 10 months, as stated.

There was nothing wrong with my method. Some, like Miccolis,
didn't like the results.

> Or ignoring the reclassification of Tech Pluses as Techs upon
>renewal, which you also did.

That's true. However, despite Miccolis' following demand of
"fault," Miccolis did not adequately explain how many such
reclassifications there were or their impact on my numbers.

>Or assuming that NO new Technicians upgraded in
>ten months, which you also did.

Those weren't mentioned. If there is "fault" in any analysis,
then it is in Miccolis' failure to accept any observation that
does not jibe with his True Beliefs.

>How do you know what I think? Can you read minds? Are you God? I don't think
>so.

I've never claimed any telepathic powers or divinity...not even
to being some kind of "apostle" of a True Belief.

On the other hand, Miccolis keeps harping on "fault," "mistake,"
"error" based on nothing else but a failure to accept that this
True Belief is not longer a creed of newcomers.

>What is really going on is that I have repeatedly shown that your analysis
>methods are faulty. So rather than correct them, or admit your mistake, or
>even try to defend them, you attack the messenger.

There was nothing "faulty" about the observation or interpretation.
The result of my observation may, to some (such as Miccolis),
appear to be heresy...therefore "faulty," "mistaken," full of "errors"
is repeated over and over and over and over again. Good "big lie"
technique in newsgroupieism.

>Textbook ad hominem. Which is faulty logic, too.

Nonsense. Repetition of "fault," "mistake," "error" does not
justify its validity.

>Buzzwords and bafflegab. Heck, those aren't even current buzzwords and
>bafflegab. Get with it, Len - "paradigms" is an '80s management buzzword.

Wrong. Error. Fault. Mistake. 1990s. :-)

>I didn't ask for it. All I want is answers to simple questions, but you don't
>give those. Because they are too embarrasing for you.

It appears Miccolis merely wants to prolong the issue by "loaded"
"simple questions." Good technique in newsgroupie battling. :-)

>How? If your numbers and methods are valid, explain and defend them against
>my critique. Show where MY analysis is faulty.

First of all, Miccolis started with a 12-month period beginning prior
to 15 April 2000. That would introduce errors for a post-restructure
observation (Miccolis wants to make the word "analysis" but
observation seems more semantically correct).

Miccolis refused to accept any buffer time in April or May 2000 in
order for FCC licensing and databases to become updated. At
one time Miccolis insisted that all must count all of April 2000
class data without giving any valid explanation.

Miccolis continues to ascribe everything in terms of "faulty,"
"mistaken," "error" etc. over and over and over again as if
that is a valid or justified counter-argument. Such is nothing
more than polite ad hominism.

> You haven't done that - all you do
>is edit out my proof of your errors and attack the messenger. Then you toss
>in some dirty words for some reason or other.

Miccolis' "proof" was considered in the obvious light of opinion
at the time of trying to show that newcomers were somehow
thronging to HF bands. My observation was simply on the class
of license based on readily-available tabulations of publicly-
available data. That data did not include precise numbers of
changes in class over the 10-month period because such
tabulations are no longer done at the website I used. Miccolis
insisted that it "should be done" and then statedd that my
observation was "faulty" because I did not use available data.

>Nope. I'm acting like a real engineer, who wants to see how the conclusions
>are derived, and who won't accept sloppy thinking and faulty handwaving
>processes.

Hmmm..."sloppy thinking" and "faulty handwaving." Is that the
description of observation of tabulations of classes of amateur radio
licenses over a stated period using information available to all?

>Worse yet, I won't be bullied into accepting something because somebody calls
>me names or uses scatalogical terms.

No one is trying to "bully" Miccolis...yet he is doing the same thing
here with this (common to Miccolis) technique of "Battle To The
Death" in long, long, long "critiques" charging "faulty," "mistaken,"
"full of error" statements. :-).

>>The trend of newcomers going to Technician was there before
>>restructuring. It continues.
>
>And as I have said dozens of times: NOBODY DENIES THAT!

I do not recall Miccolis saying that more than about five or six
times. That is less than a dozen. [fault! error! mistake! :-)]

>> Further, against the grain of the
>>established ham conservatives, Techs are renewing as Techs.
>
>Most of them. Same as every other class. I've been renewing in the same
>license class for three decades.

Times well prior to April 15, 2000 are not acceptible in discussions
about changes happening after April 15, 2000.

Bad "engineering," even a lot of "handwaving." :-)

>>Such is heresy against Conventional Wisdom (CW) of the
>>long-time ham conservatives.
>
>You said that - not me. Why do you deny that ANY of them upgrade?

Denial was not in any of my observations. :-)

Nor is the "explanation of what happens in a 'real engineering'
environment" germane to any discussion of tabulated data of
radio amateur licenses after April 15, 2000.

It would seem that Miccolis wanted to bring in a discussion from
another thread involving "real" engineers, a false argument that
branded anyone not state-licensed as Professional Engineers as
being "not real" engineers. Invalid and irrelevant, although it did
show the extent of trying to win this "Battle To The Death" on a
subject in a newsgroup. :-)

>Real engineers don't fix what ain't broke. Real engineers don't reinvent the
>wheel. Real engineers don't accept things because somebody else says they
>"believe" those things.
>
>Real engineers are not bullied.

Ahem... "Real" engineers...who keep on receiving paychecks in
one company...have to compromise to fit company standards.
Or, if self-employed, do not try to tell potential customers that
they are "wrong," "mistaken," "full of errors." :-)

This forum is decidedly NOT any sort of "design review." Miccolis
is not a "chief engineer" or even "senior staff engineer" "leading
this 'design review.'" This forum is simply a discussion forum,
free-form debate which usually takes on aspects of arguments
and battles over Belief Systems of ethics and morality. :-)
>
>> Avocations are NOT engineering.
>
>Many of them require engineering. When a ham puts up a tower, it better be
>engineered correctly, because if it falls down and causes damage, the fact
>that it's "avocational" doesn't mean a thing.

Irrelevant to the discussion-debate-argument subject. :-)

>> Amateur radio is an avocation.
>
>So? Your attempted diversion does not hide your mistakes or change my
>arguments against those mistakes.

There was nothing to "hide." No "mistakes" or "faulty methods" in
"analysis" when the data source and conditions were explained in
public in the beginning.

>The status quo is now one code test and three written tests.

True.

>The status quo is
>now that support for code testing is only kept alive by the treaty
>requirement.

Incorrect. All that has been said in regard to post-restructuring
is that the FCC did not remove Element 1 (code test) due to
ITU-R S25.5. Nothing at all was said by the FCC as to
longevity of any code test.

>The status quo is that support for that treaty requirement is
>decreasing.

No. That is merely conjecture on Miccolis' part. There is no
mention of any debate-discussion of ITU-R S25.5 in any
agenda for WRC-2003. Until that happens the status quo of
S25.5 is that it remains as-in.

>The status quo is that the code test will disappear shortly after
>the ITU meeting in 2003.

No again. Miccolis' sentence is simply a rewording of the
previous sentence.

>They aren't? How many "newcomers" do YOU know? How do you derive such a
>sweeping statement? From your "beliefs"?

Irrelevant and unproveable by data. My conjecture has no
"poll" or other data...no more than long-timer True Believers
put up their own experiences as reasons-for-being of
existing regulations.

>Nobody denies that, least of all me. Why do you spend so much bandwidth
>repeating the obvious, Len?

Why does Miccolis insist on "analyzing" each and every sentence
in another's post? :-)

>>radio amateurs are Technician class. The vast majority of that
>>class has not taken any morse code test
>
>Ahhhh - BUT SOME OF THEM HAVE! At least 7079 of them, and probaly many >more.
>Which means they are NOT all "noncodetested" or "non-HF licensees".

Please note what I wrote: "Vast majority" which does not mean
"all." Vast majority is a subjective quantity but generally taken
to mean more than half, usually more than three-quarters.

Miccolis' argument was shouted" "BUT SOME OF THEM HAVE!"
The word "some" is indeterminate, subjective, unquantifiable.

>Pure wish-fulfillment and speculation on your part, Len. Nothing else.

Speculation based on varied media and personal input.

>You
>don't know how many have taken the code test, so you ASSUME nobody has.

The exact, quantifiable numbers are not available on who took
a code test and who did not.

Note that I never wrote "nobody (of Technicians) had taken a code
test." Ergo, there can be NO "assumption" as charged.

>You deny the stated proof that thousands have taken the test.

Absolute nonsense, incorrect, faulty, and full of error statement.
No, absolutely NO such statement was made.

There is NO quantifiable data of any kind to state how many
radio operator code tests were failed, not taken, or anything
else. What the long-timer conservatives seem to insist is
that "thousands and thousands have taken a code test" as if
that "proves" something valid for any radio operator examination
in the future. Such a "claim" is based on OLD data of those
who have passed a code test. To remind everyone, this
subject is supposed to be about POST-restructuring, not some
"history" lesson.

>Of course. That's what they said. So? They said that 4 license classes was
>the best thing for ham radio in the NPRM, then dropped it to 3 in the R&O.
They
>had to issue an errata to the NPRM, and the errata had mistakes in it. They
say
>all kinds of things.

An NPRM, a Notice of Proposed Rule Making, simply outlines a
basis for Comment by interested parties. Final decisions are
explained in an R&O, the Report and Order.

"They say all kinds of things" is a non-sequitur about the FCC. The
FCC is the regulatory agency of US civil radio. All civil radio
licensees ("civil" in denoting non-government, non-military radio)
must obey the regulations of the FCC.

>Uh huh. Instead, they should buy YOUR "belief set", founded on hate of
>anything that you don't like.

Miccolis is again mistaken, faulty, and full of errors. I am simply
advocating a belief that a morse code test for an amateur radio

license is not needed for licensing purposes in regulation. The
FCC agreed with that viewpoint in 1999 and in 1990.

>Who are you to tell newcomers what to believe? You can't even defend your own
>analysis processes here.

Who is Miccolis to tell newcomers what to believe? :-)

The only "defense" of a clearly-stated observation of post-restructuring
license class changes was in regard to Miccolis' untrue, unproven,
provoked charges of "mistakes," "fault," and "errors" which were not
there in my posting..

>Try admitting your mistakes instead of attacking the messenger.

No problem. When I make a true error, I acknowledge it. I will not
"acknowledge" any "false" errors charged by those who insist on
responses that suit their opinions. Such is Management or
Marketing technique, certainly not "real engineering."

Vincent Biancomano wrote:
> Why not just stay to the issue: easing of requirements.

I am staying with the issue, Vince. Using transistors is easing the requirements. Using tubes makes everything harder. If we want to make ham radio harder to implement, let's just outlaw solid state devices along with the commercial ham transceivers that use them.

The US is moving to easier implementation of all communications, Vince. That's the predictable result of scientific advancement. That you want to keep hams quagmired in the dark ages of radio is a pitiful attitude and a sure way to completely kill the Amateur Radio Service.

>>exists today, obey the rules of that service?

>As far as I can tell, yes.

Further proof that you are an idiot.

You are again challenged to drive across town, or to any other locale
within the "legal" 155 mile range allowed by Part 95 and then conduct a "legal"
communication with Mrs. A.

>Have there been any "official polls" taken to "prove" one way or the
>other? If so, show the work.

Turn on a radio capable of receiving AM or SSB signals in the 26mHz to
28mHz range.

Connect an appropriate antenna.

Listen.

>>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>>example of how that Service should conduct itself?

>No. There are far too few channels for the number of users based
>on reception in the Greater Los Angeles region. That is a subjective
>opinion based on the number of "heterodynes" heard on each of the
>forty channels

Have there been any "official polls" to "prove" one way or the other? If
so, show the work.

(Where have I heard THAT before...???)

>>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>>example of how the Amateur Radio Service should be conducted?

>No. Why would that even be a question, other than trolling?

YOU suggest that someone else's post is "trolling"...?!?!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

>Would Miccolis hold up US amateur radio service as the "proper"
>way to conduct citizens band radio service communications?

>If so, why? Show the work.

Did "Miccolis" suggest it was? Does Anderson have any proof that it's NOT
a proper way to conduct communications? Show the work.

>Would Miccolis hold up US amateur radio service as the "proper"
>way to conduct Public Safety Radio Services, Aviation Radio
>Services, or Private Land Mobile Radio Services? If so, why?
>Show the work.

Did "Miccolis" suggest it was? Does Anderson have nothing better to do
with his "quality time" retirement than to drop his own trolling line in the
RRAP waters? Can Lennie not form a question that falls into the "SO, Did you
like having sex with your Mother?" category?

More Andersonianistic hatred and rhetoric. Not that we'd expect less.

But not enough to save the Morse cw pass/fail test, either internationall, or here in the US. The trend is clearly the other direction. Get on the bandwagon, or get run over by it. Morse is just another mode of choice, as it should be. Making people "work" at it is no longer operable.

Just look at the smelly mess in questionable drug asset
forfeitures and other "procedures" that local law enforcement
gets into when they are able to keep a portion of asset
forfeiture "proceeds" as if it was "income".

I would rather keep the Federal system honest and make The
Congress shoulder its responsibility to fund the FCC from
general revenue, not from "future" asset forfeitures.

In major harbors and waterways there are USCG Vessel Traffic
System channels as well as Channel 13 - Bridge-to-Bridge (Guard)
channel - that must be monitored and used as appropriate. Even
though it's optional for small craft, it's a smart thing to do,
lest the Oceanic Princess cut you in half when your back is
turned....

It's common to see three or four VHF radios working on the
bridge of compulsory-equipped vessels who must monitor 13, 16,
VTS, and whatever working frequency they use.

It is no longer necessary for you, as the driver of a vehicle, to
know how to manually crank the engine or advance the spark.

If you were dying, would you turn down help from a ham who doesn't
know Ohm's law but is a darned competent emergency operator?

IMO, the only valid reason for the continued existence of the ARS is
to provide emergency communications. It is not necessary to know Ohm's
law in order to provide emergency communications. It is, however,
necessary to have enough emergency operators to provide emergency
communications.

No aspect of life is without controverrsy or debate, Mike. The number two
cause of war in the world is religious intolerance, yet if you ask anyone what
is so IMPORTANT about religion, it is love and acceptance...Go figure. Amateur
Radio is no different.

This NG is NOT Amateur Radio. It is (for the most part) a forum for
discussing that which we really care about, and for some people, a means for
discussing that which they are not otherwise able to do so.

TRUE Amateur Radio is ABOUT radios. That's NOT what this NG is about, protestations of some posters to the contrary. It is very much about pontificating, "puffery", postulating, procrastinating and pointless pandering. We are ALL guilty of it. Some are even GOOD at it!

And for SOME....for discussing things in a manner in which they would not discuss things on the air!

If you are not already licensed, TRY IT! I have been a Ham for almost 30 years now and it is an ongoing love affair and learning experience. There is always something new and exciting to do.

73 and good luck.

I'd accept help from a 'ham' who was the WORST emergency operator
of all time, Cecil. Or just a civilian with a 'walkie talkie.'
Your argument makes absolutely no sense in the context of ham
radio. The issue is easing of requirements.

>IMO, the only valid reason for the continued existence of the
>ARS is to provide emergency communications. It is not necessary
>to know Ohm's law in order to provide emergency communications.

It's not necessary to know anything to provide good OR bad
emergency communications. Ham radio is not unique in providing
emergency communications. That's a major reason Amateur Radio is
basically toast today, as Vic Clark understood well.

That's exactly what I'm discussing, Vince. Would you accept help
from a ham who entered ham radio under eased requirements? Can
a ham who knows Ohm's law save your life any better than a ham
who doesn't know Ohm's law?

> It's not necessary to know anything to provide good OR bad
> emergency communications.

Well, that's obviously an overstatement but I'm glad that you
agree with me that halitosis is better than no breath at all.

Times are changing, Vince, and progress happens. You either learn
to live with that fact or get buried in the sands of time. Integrated
circuits have made it unnecessary for a ham to know how integrated
circuits work just as modern automobiles have made it unnecessary
for you to know how to manually advance the spark.

Must have carrot, must have money, fund the agencies that produce money
and allow them to do their job.

PHIL,
The New Orleans FCC Office has 3 people (field) which covers the Gulf
Coast from LA-TEX Line to the Panhandle of FLA and the whole States
of Louisiana, Mississippi, LA (Lower Alabama)(LOCAL JOKE), Arkansas
with assistance from Dallas and the Panhandle of FLA as well as
the Port of New Orleans. I watched an Agent speak lovingly of when his
retirement time will come, 90% of the cases are Phone Co related,
5% Tower stuff and the rest is putting misc fires. They work the
interference cases and the bootleggers when they can.

>That's exactly what I'm discussing, Vince. Would you accept help
>from a ham who entered ham radio under eased requirements? Can
>a ham who knows Ohm's law save your life any better than a ham
>who doesn't know Ohm's law?

And again, whether it's a ham or not, the issue is about ham radio, not about who is supplying emergency communications. It's called ham radio because an understanding of 'radio' is implied, and indeed, ham radio is officially defined as such.

>Integrated circuits have made it unnecessary for a ham to know
>how integrated circuits work just as modern automobiles have
>made it unnecessary for you to know how to manually advance the
>spark.

Integrated circuits contain oscillators and amplifiers, passive components, and so on, and I expect hams to know what they are and how they work if we're talking about 'ham radio.' No matter what new device they're in. Until ham radio is officially redefined, that is, not redefined in de-facto fashion.

You clean the floors at WKRP in Cincinnatti...??? Can't be anyone improtant, since there's NO name here. Just another anonymous coward trying to impress someone with thier "Hot Tip" newsgripe flash.

>We find people all the time using cheap marine radios for CB style
>communication, both local and long distance, even kids using it as a hobby,
>like CB, just to screw around with. THERE IS NO FEDERAL ENFORCEMENT.

Then they are falling down on the job there, but in the Chattanooga area last summer, 15 people were cited for the very same thing, all but three using marine radios for a taxi service.

There IS federal enforcement.

>They don't care

Yes they do.

Try some real facts and real situations. The rest is as ficticious as your "name".

>renewals?

Lennie, prove to me where those who are renewing are all "just"
Technicians, or have passed the code test at a VE session and are carrying an
CSCE as authorization.

You have an unknown variable that you cannot quantify short of complete
polling of every current Technician Class Amateur. Are YOU going to expend
those funds?

>Are there really more HF-privileged licensees on the air after
>restructuring took place on April 15, 2000? If so, how can you
>"prove" that? By insulting others again?

I don't have to insult anyone to remind everyone with a junior high school
math education that where there is an undefined variable, you have an unknown
result.

>Where is "the math flawed," nursie?

In Southern California, it seems.

Nitey night, Lennie. Have an extra swig on the Geritol on me tonight.

2843. Re: Questions on Marine radio

Source record: 7144

Phil,

I am certainly no stranger to the ELT/EPIRB searches. In the vein of this thread, it is alarming to me the rate at which bootleggers of all sorts seem to be operating with impunity anywhere they please. As an active CAP member, licensed to operate on CAP/USAF frequencies and a ham as well, I am disturbed. While we sit here and discuss the ramifications of various bands, no one seems to be attempting to do something about it. It would seem to me that we, as a group, should start the ball rolling by flooding our Congress with letters carefully explaining the problems that this can cause. We must make them aware that all is not well in River City. FCC MUST be adequately funded to go after those outlaws who operate on frequencies for which they are not licensed.

Some years ago (ah, for the old days of an FCC with TEETH!), there was a search in my area for a light plane that disappeared in a thunderstorm. We set up our communications, using VHF-FM repeaters for coordinating several search bases scattered about a 70 mile radius, and a 26 MHZ frequency for low power "incidental" comms. This was a reliever frequency used for flight line to ops, personnel to ground ops, and even sending out for sandwiches. It soon became evident that we were going to have trouble, for there was a high powered CB station a-jawin' away right on top of us. With the 5 watts we were using, it was impossible to use it for more than a few yards away! I was absolutely enraged at this intrusion. At that time we were governed by FCC rules rather than the NTIA as we are now, and we were prevented from asking the guy to move (can't talk directly to an illegal station). I doubt he would've anyway. I hunted for this fellow for a couple weeks after. One day, I happened to travel to a small town just a few miles from here to drop off a person who needed a ride home. I turned on my radio and was instantly greeted with a loud, booming signal that had my meter pinned hard over. Same voice! I had no DF equipment with me at the time, but I KNEW this guy was within a couple miles. I stopped at the local town police station and asked the dispatcher to come listen to see if he knew who that was. As soon as he did, he said, "Sure, that's XXXXX and he lives on Alabama Ave". I drove over there, and sure enough, there was a tower with a set of "moonraker" beams in the yard. I went home and returned with a tape recorder, sat in front of his house across the street for a bit getting enough "sound bytes" to bite him in the a$$. I sent the info off to the Wing Communications Officer. The following Monday, I'm told a couple of well dressed gentlemen and a US Marshall knocked on his door! He lost his equipment and his "exchequer" was considerable lighter!

That is the sort of response it will take to get these lawless morons to abide by the law. The laws are there to allow for the efficient use of the spectrum by all who have need. These people not only are are ignorant of the concept of Frequency management, but they only care about their own convenience.

It may be a dream, but I hold the hope that FCC will soon be fitted with a new set of TEETH!!

Well, that's an excellent answer. But it sounds a bit contrived - to fit a particular circumstance. And I seriously doubt that's the answer Vince would have given.

One would hope the FCC cares about the health of the ARS. But the idea seems a bit pollyannaish to be coming from a federal agengy. Do you have anything in the way of fact that might lend support to such a notion?

>the
>organization."

Sorry, Ed, I'm not convinced. If the vote is made public, nobody has to ask their director, because they already know the answer. No director would ever have to say "I voted against it, but I support the policy of the organization" if the vote was public.
>
>Of those that voted against it, it is still unknown why they did so.

Voted against what? The proposal to eliminate support for S25.5, or the proposal to have a rollcall vote?

>Did theyfeel it went too far, or not far enough? If I were on the Board
(Director
>Hare
>-- does that have a ring to it, or what?), I may have voted against the
>proposal as written.
>
I think there should have been more time allocated to getting the word out, and more publicity about the agenda item.

I think one factor driving this change was the Region 3 IARU meeting. Another was the final form of the R&O, and the comments of the FCC. Better to devote one's resources to things like the 40 meter issue, where there's a chance of winning.

You gonna collect on that lobster bet or what?

Wait til you try to download it from FCC.gov. You get 60 pages of which pages 9&10 are the only thing you really need along with the fact that Block 1 should be 'HA'. The 605 is the one-form (with suitable addenda) does all approach. You get real familiar real quick with printer instructions.

Ed if you could wake up yoiu would know from long ago that it is the
SYSTEM that I demean and not the products of it. I have made tha clear
many times.It isn't the fault of new Extra licensees that they were not
required to learn anything meaningful to attain that level of licensing.
But it is no less shameful.
Of course you can easily overlook the resulting inferior product. Just
as long as he joins the League.

Thtr FCC might just as well have dropped all pretense of graduated
licensing.

Right! Why go to all the trouble to actually learn all that mundane material when one can just memorize whatever is needed to regurgitate the required verbiage at test time? You've already said you went through your EE program doing that. Why should it matter at all for hams and Extra class exams?

So what we eventually have, sooner rather than later the way it's going, is a ham radio that exists in name only, and then only because FCC hasn't gotten around to renaming it. The basic original entity will have de facto ceased to exist.

What did the R&O say about the reason why the requirements were being
eased?

Cecil:

Unfortunately, that particular sword cuts both ways. In fact, it was exactly
the brutal ad hominem attacks of rabid NCTA's that embroiled me in this
debate on Fidonet over a decade ago. Also unfortunately, I must admit that
I have been responsible for my own fair share of such attacks -- but only
after being quite righteously provoked. The difference is that I do have a
conscience about such things; a lot of Usenet users do not. Such is the pity.

Just logic. It's logical that the FCC recognizes and wants to preserve the emergency communications function of the ARS. It's logical that the FCC recognizes the average age of the members of the ARS. The nocode tech license has contributed a large percentage of the present ARS membership. It's logical to continue that same trend of reduced requirements in order to attract enough amateur radio operators to provide the emergency communications function.

(Camel's nose story deleted for brevity.)

Hans:

Thanks, your story has proved my point. If we didn't want the "camel's
nose in the tent," why did the FCC get involved in reducing amateur radio
licensing standards? Obviously, because a lot of camels couldn't breathe! Or,
more
accurately, they weren't able to grab a microphone and start talking. But I
know the cure for that -- let 'em try to do my job for a couple of days!
They'll
get tired of talking into microphones right quick!

IMO, emergency communications is the only useful function performed
by the ARS so it cannot simply be ignored.

> Integrated circuits contain oscillators and amplifiers, passive
> components, and so on, and I expect hams to know what they are
> and how they work if we're talking about 'ham radio.'

Why, Vince? To what purpose? Automobile operators no longer need
to know how automobiles work. Not many hams will even attempt to
repair an IC-706.

There is no basic original entity, Dick. Amateur Radio has been changing
and evolving ever since it was conceived. You like the first 40 years of
change and hate the last 40 years of change.

I disagree with it in the sense that it is a false statement. The
ARS is not a fundamentally technical service and hasn't been for
a number of years. The ARS is fundamentally a communications service.

Well, Dick, one would have to agree his message is confusing...
even to Cecil, I suspect. On one hand, he's railing about old
technology versus new, and new hams being held back in learning
the new. On the other hand, he's stating that knowledge of
technology is no longer needed in ham radio, anyway: just
knowledge of rules, regulations, being a good op, and safety.

The new technology has obsoleted the old ways of doing things, Dick.
That's true in all areas of our lives and it is true in ham radio.
Why do you believe that amateur radio should somehow be exempt from
change, evolution, and progress when nothing else is?

A little less than half of those 400 false distress calls I mentioned. If I remember correctly, it was about 170 to 180 in 1999 (I had a paper with the exact numbers, but I couldn't find it while writing this). However, unlike the outright false voice distress calls, most of those are true accidents ranging from activation while handling to people testing them (not remembering they're actually transmitting a distress).

But, like you said, we have to treat every single one as a real distress until proven otherwise. Luckily, most accidental activations are fairly easy to spot - the transmission is coming from a boat launch (or other boat facility), a marine supply store (yes, it happens), and so forth. If those transmissions continue for some time, someone is usually sent out to locate the unit and get it turned off (it may cover up a real transmission).

Hams can do exactly what I did after I graduated with a BSEE degree.
They can learn whatever they need to know as needed. A ham radio
exam is an ENTRANCE exam.

Amen to that, Jerry. While the FCC is trying, and not doing too bad of a job (except for the mess on 27-28 MHz), it could definitely use more funding, and more staff, for enforcement.

That's not all that ham radio is about, Vince. I learned almost
everything I know about how things work *after* I obtained my
Conditional license. I learned almost nothing from memorizing
the answers to the questions on the General exam in 1952. IMO,
ham radio is presently mostly about emergency communications.

Until Part 97.1, basis and purpose of ham radio, is changed
officially, then ham radio is defined mainly as a technically
based hobby. Parts b, c, and d, speak to that. The problem comes
about as a result of forces trying to change ham radio to a
non-technical hobby in de-facto style. That's the FCC's failing,
who had their chance to clear the air and decided to pass it up
by saying that "ham radio is a fundamentally technical hobby" and
then falling apart in their R&O explanation.

There is not a lot the Coast Guard can do about it anyway. Other
than very specific situations (interference with navigation or
distress, compulsory vessels, etc), enforcement is handled by the FCC.
Even if that were not the case, most Coast Guard facilities are just
as strapped for staff as the FCC.

Actually, in the grand scheme of things, that form does reduce the amount of paperwork - that one form does the job of six or seven other now discontinued forms. Of course, as you've realized, for the individual filling it out, it certainly didn't reduce the amount of paperwork. Of course, when it comes to the government, the individual doesn't really count that much.

No big loss. He was nothing but a face anyway.

"Although he was on the advisory board, Spielberg did not currently have an active, direct role with the Scouts, Levy said. Spielberg, who earned a Scout badge for photography in his youth, previously convinced the organization to adopt a badge for cinematography"

Interesting why he waited all this time since the Supreme Court decision to finally make his move. Obviously it was more a publicity move than true convictions. Interesting that all these nay sayers have been silent for the past 90 years. Seems the BSA has maintained these standards since their inception and only since it became politically correct did anyone express their righteous indignation.

I wonder of the NAACP should sue the KKK discrimination against its members being allowed to join the Klan. Or perhaps the B'nai B'rith should sue the Knights of Columbus for the right to become members.

All it does is increase the $$$ being donated directly to the BSA. Ross Perot, wacko that he might be, has donated over $50 million to BSA HQ to cover the shortfalls that the national councils may experience.

Way to go Ross.

>the brutal ad hominem attacks of rabid NCTA's that embroiled me in this
>debate on Fidonet over a decade ago.

I, too, disagreed very strongly with some of the insults and attacks that some of the NCTAs used. Unfortunately, those that are now using the same tactics appear to be aligned with the PCTA side. It is unfortunate that some of both opinions feel that such conduct is appropriate in any social situation. Even worse, at least one of them feels that his demeanor is helping to teach people right from wrong.

>Also unfortunately, I must admit that
>I have been responsible for my own fair share of such attacks -- but only

There is nothing "ad hominem" about calling someone a "baldfaced liar" if
they are indeed lying.

Some people can't "debate" without rapidly escalating the "debate" to a
shouting match. They have little or nothing to "debate" with, and/or are
unwilling to accept known and established facts when presented with them.
Thier last resort is name calling and fighting.

Oh well.

It is symbolism over substance, Vince. The majority of ARS members are not technical. One had to be a mechanic to drive the early automobiles. One had to be technical to build and operate early amateur radios. The same thing happened to ham radios and automobiles - scientific progress happened - mass production happened - good designs by professionals happened. With a BSEE degree and 35 years of engineering experience, I could be called a technical person. But I could no more duplicate an IC-706MKIIG than I could flap my arms and fly.

The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143
that:

(a) "the public interest will best be served by reducing the telegraphy
examination requirement to the minimum requirement that we have found that
meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency
is not necessarily indicative of that individual's ability to contribute to
the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in
furtherance of the purpose of the amateur service and we do not believe that
it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis
on Morse code proficiency as a licensing requirement does not comport with
the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing
requirement will allow the amateur service to, as it has in the past,
attract technically inclined persons, particularly the youth of our country,
and encourage them to learn and to prepare themselves in the areas where the
United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

Larry KC8EPO

Change 'camel' to 'radio outlaws', also known as freebanders, and the
tent to 'ham radio' and you have the situation we face, albeit on a
smaller scale - for now.

If that is true there should be no advanced levels of licensing.
Entrance exams are entrance exams, such as Novice and General. Advanced
and Extra are not, despite your (and some of ARRL staff) insisting it is
so. Never was, never will be, except that the tests of today have so
diluted the mix that FCC might as well just go ahead and issue one
license to all. It is more smoke screening and falsfication.

>telegraphy examination requirement to the minimum requirement
>that we have found that meets the Radio Regulations" ;

>(b) "an individual's ability to demonstrate increased Morse code
>proficiency is not necessarily indicative of that individual's
>ability to contribute to the advancement of the radio art" ;

The above demonstrates ONE example of how FCC got into the
trouble it did with its R&O. That is,

An individual's ability to demonstrate ANYTHING, including being
a professional engineer, is not necessarily indicative of that
individual's ability to contribute to the advancement of the
radio art.

Regards,
Vince, WB2EZG

What you don't seem to realize is that the advance in technology
is the cause of that "terrible skid of some of the people". It's not
terrible at all and is the predictable result of those very advances
in technology. It has happened in many other fields. You are living
in a delusional world if you think you can keep it from happening
in ham radio. You long for a return to the good old days but those
days are gone forever.

You don't have to be a mechanic to drive a car. You don't have
to be an electronics whiz to use a ham radio. Professional auto
designers design cars so you don't have to. Professional radio
designers design ham radios so you don't have to. You are
no more capable of arresting the evolution of the ARS than you
are capable of arresting the evolution of the automobile.

We are talking about "acquisition of technical knowledge", not
about digging a ditch. Acquisition of technical knowledge is
fun for me and is essentially effortless.

Earth to Dick: Professional designers of electronics have made it
unnecessary for the participants to need to have much knowledge of
the communications technologies. Technology has out-distanced the
abilities of the vast majority of hams. Amateur radio operation is
mostly plug and play now just like a host of other fields.

What a silly thing to say, Dick. The Advanced exam was the entry level
exam into the Advanced class. The Extra exam is the entry level exam
into the Extra class. What is it about ENTERING the Extra class by
passing the Extra exam that you don't understand?

Maybe I can offer a little insight here, Ed. While you and Cecil and
othres posting here spent much of your youth hanging out in the hippie
culture, presumabely looking for new and creative ways to avoid reality,
Larry and I were in the military getting a full dose of reality on an
ongoing, daily basis.
We learned that you don't neutralize an avowed enemy by pandering to
his every whim.
Do I believe that ham radio has enemies which do not wish us well? A
good number of whom are present amongst us? Does a bear live in the
woods?

Hi Larry,

Have you got that written into a macro or something? You post it as if the FCC published it that way. The FCC never published a document in such a form. It appears to be your own creation, with the context of their comments having been deleted.

More to the point, do you think their intent is to "ease" requirements?

There's a much more fundamental reason for the ARS to exist. The amateur spectrum is like a National Park. Citizens have a reasonable expectation to be able to make use of the radio spectrum without a dependence on commercial radio service providers. Selling amateur frequencies to the highest bidder is no different than turning Yellowstone Park over for private, commercial development.

It is a mistake to put all our eggs in the emergency communications basket.

UPDATE!!!

USA: KSMR Disappears
By Hans Johnson, Cumbre DX, and Nick Grace C., Clandestine Radio Watch
Clandestine Radio Watch 65 Extra, March 24, 2001

[Mar 24] After weeks of broadcasting, KSMR - Kentucky State Militia (KSM) Radio - disappeared on March 21st.

Although the reason for the disappearance cannot be confirmed, CDX- CRW received a report that the KSM ordered an immediate end to the station`s transmissions earlier this week. The KSM, however, did not respond to a inquiry asking them to confirm or deny this report.

CDX-CRW have also learned that the operator of KSMR, 'Major' Steve Anderson, may possibly return to the air with a new station. This operation may be a militia-supported station, but may have a different callsign and fewer, if any, ties to the KSM.

Full story: http://www.clandestineradio.com/intel/usa.htm

Once more we get into the great debate among gays, the Boy Scouts, and the literal-minded God Squad. I am blessed sick of it. For the record, I am a straight male, ex-Boy Scout with my own problems with the BSA on an entirely different issue, and have enough Christian background to know that in Pauline Greek 'religion' and 'superstition' are the same word.

I invite readers to perform an experiment. Put a hand flat on the table in front of you. If you are male, you will note that your ring finger is longer than your index finger. This is not the case generally with women. You will further note that your dominant hand has a ring finger slightly longer than the non-dominant one. This is one of the trivial effects of exposure to testosterone in the womb. Every fetus produces it in the adrenals if not the testes. It does not come from the mother.

As it happens, design-center in the human and most of the animal kingdom in fact is female. When the International Olympic Committee, suspicious of the East German ladies, asked for a test to determine whether they were in fact women, the manufacturers of such tests told them that they could determine maleness and certify that they were not men but could not determine femaleness.

Producing a male requires a lot of work and it is not a foolproof process. It is generally accepted that female homosexuality is the result of excess testosterone; it is a prime suspect in autism; it is a good suspect in a number of other conditions. It is no huge secret that left-handedness goes strongly with males and we all know that being left-handed is a bit more than being right-handed mirror-image in terms of brain wiring and such. The male proclivity for inhabiting prisons and mental institutions is also no military secret. Face it, gang, to some extent being male is a birth defect.

While I know of no direct research that confirms the relationship, it is a pretty fair bet that a malfunction in the hormone bath process that determines maleness and redesigns perfectly good female brains and plumbing is part of the production of male homosexuals. To at least a very large extent, they are born not made.

So to speak in moralistic terms is flatulence, at least about the condition itself. It is not in the least unfair to point out that the gay community is a sink for every venereal disease known to man. But to simply gay-bash is like criticizing coyotes for eating sheep.

It is perhaps incumbent on the mainstream to learn enough not to equate homosexuality with pedophilia; given the number learning ASL for the deaf, however, this may be asking too much. The gay 'lifestyle' is not an equal alternative to the mainstream but there is no good reason for it to

be stigmatized. The diabetic did not ask for it either but generally maintains a balanced life.

But the insulin-dependent diabetic generally does not shoot insulin publicly, the left-hander finds himself a spot on the left side of a table at a banquet, and gays might be well advised to follow the example.

If there is a majority group, it is those of us who would wish the God Squad to learn something of faith and respect for the works of God, wish the gays to get the hell out of our face, and wish the Boy Scouts to develop the good sense God gave the average billy goat. The cacophony of idiots gets old after a while.

Are you saying that the ARS is an attempt to put aside some spectrum as a
national playground for the common folk? Therefore, we don't have to justify
our existence? I'll have to cogitate on that one.

Larry, that is just so much bull. The reality is that we all
make various choices regarding our time and how
we spend it. The choice to learn or not learn any
particular skill has nothing to do with maturity at all.
The issue we NoCodeTestAdvocates raise is that
there is simply no longer any valid reason to retain code
skill as a requirement. You may disagree with that,
but in the end, that decision will be made by a
cross-section of the worlds radio regulation policy makers.

Feel free to comment to those policy makers that
you beieve the end of code testing is just a sign
of their imaturity in making the decision to do so.

> Unfortunately, new hams coming into the service after

You conveniently didn't answer my question.
Your posts seem to be (IMHO) much more tied up with
some affinity for WORK as a discrete effort that
should be reuired to obtain a ham license. The
reality is that the FCC does not now and never has
ever been concerned with work as an element of
licensing.

example of how not to behave.

>I just found out the league is going to push to remove all code requirements
>at the next international meeting. It's just the next step in their continuing
>efforts to dumb things down.

Your understanding of the league position is flawed.
The vote the league directors took was simply to
not oppose the removal of code as a requirement.
It is only the spin that you and others now state that
is recasting the league position to be one of pushing, rather
than simply not opposing.

The argument Vince, is exactly as Cecil states:
"As an entrance requirement, it is
simply outdated and therefore is in the act of being dropped."

Now Vince and others may disagree with that assessment,
but that doesn't change reality. I have several antique autos, each
is obsolete in terms of contemporary motor vehicles.
The fact that I occasionally USE those vehicles does
not make any of them NOT obsolete.

>days are gone forever.

Well said Cecil. The point also missed is in all those
other areas that are electronic related (e.g. consumer
electronics, TV, VCRs, DVDs, etc.) the old "support
mechanisms" like repair shops which were also somewhat
of a training ground for the electrical equivalent of the
backyard mechanic are gone because the cost of
these products is so low that when one fails after
10/15 or more years, the replacement cost for a new unit
is cheaper than the lowest possible cost of repair...AND
the new product replacement usually is better and has
more functionality.

>You don't have to be a mechanic to drive a car. You don't have

>are capable of arresting the evolution of the automobile.

Indeed, the ability to create any ham equipment with the
functionality of even a modern HT is far beyond the
practical ability of most any one individual...even if that
person had the technical competency to design it.

The problem you have Dick is that you view being
technical in a very narrow manner. There are thousands
of engineers that never touch a piece of test equipment,
or even equpment itself and yet they are actively
involved in technically planning telecommunications
networks, broadcast and military communications
systems, and a whole host of other areas.

The reality is it won't do you much good to mess with words,
Bill; you're not good at it. Obsolete means no longer in use
or practiced. Cecil has stated Morse is outdated, i.e., obsolete.
He's wrong. It's that simple. In this case, very wrong, since
Morse is still in wide use in this 'Service.' And this 'Service'
is what we're speaking about.

NO: That is CONSISTENT with the paperwork reduction act. The FCC got rid of
an entire form in favor of another that already existed.

It doesn't matter that the replacement form is longer. That's not what
"reduction" means to the U.S. Government. ;-)

But if they want to make an example of anyone, they can and
will, as I know very well. I was the District Director of the San
Francisco Office in the mid-1990s and I too "spoke lovingly" of
my retirement after The Powers That Be turned a deaf ear to my
need to add six or seven more investigators to my staff of
three. It hasn't improved any. Blame The Congress.

Jim Hawkins of the NO Office was a good friend/colleague in
those days, and very accomplished at "putting out fires".

You certainly implied that all that was necessary was our mere existence.
So, exactly what must we *do* to justify our existence?

You need to crack open a dictionary, Vince. Nowhere in my dictionaries is "outdated" synonymous with "obsolete". As a matter of fact, Webster's says "outdated" means "outmoded". That's exactly what CW has been - outmoded by other modes. That's why it has been completely dropped from most other radio services. It has been outmoded. The only reason to use CW anymore is for the same reason Bill drives old cars - for fun.

Horses are not obsolete - they have simply been outmoded by more modern interstate transportation.

Would like me to post the entire Report and Order?

The text in the quotes is the FCC words. The License Restructuring
Decision was not a hastly written document. It had all the T's crossed
and the I's dotted.

> More to the point, do you think their intent is to "ease" requirements?

No, I think they intend to bring their regulations into conformity
with law by deleting the code exam requirement with or without
the amateur radio community support. We best accept their decision
less we hear another shoe drop.

Keep praying for a bail out, Cecil, although Bill can't save you, just as he can't save himself. Starting with his "bull" statement in '93/94, when informed "the issue" was easing of requirements, not Morse. He needed Clark's statement plus FCC's concurring R&O to shut him down. And he's gone from there. Of all those arriving on the newsgroup in hopes of rattling cages just for the hell of it, then ending up rattling his own, Bill does it the fastest.

Their was a secret trade with the FCC, we got the 13 & 20 wpm code
exam requirement deleted in exchange for keeping Dick, Vincent, and Larry R
out of the FCC hair by entertaining them on this newsgroup.

It was good trade.

No "weaseling" done. Anyone showing up at my house
demanding a "meeting" has to be prepared to accept the
consequences. Judging from the language used by the
Anonymous one, this would not be a pleasant meeting.

Anyone is free to travel to and through all the states of
the USA. Tickets to LAX or PSP are not free, nor are
rental car fees, gasoline, insurance, or bail (after arrest).
But, the anonymous one has, by admission, "plenty of
income" and can afford to squander it...not by talking of
pleasantries about avocations, but by demanding
"meetings" to "discuss differences." :-)

Perhaps this is all in the "spirit of amateur radio?" A
"communications service" where some take it to be a
confrontational service wherein they seek to intimidate
others? To subjugate them to their wishes? To use
vile language in an angry tone because others are not
frightened of their majestic powers and achievements?

Thanks for proving the point that, for some, amateur
radio is not a recreational avocation, but a fume vent
for your anger and personal frustrations.

Which is it? April 30th or May 23rd?

Do you need directions? From PSP terminal drive
south on El Cielo (past the government buildings)
to Ramon Road (bear left, watch for signs pointing to
I-70). Go east on Ramon Rd to Gene Autry Highway 111,
turn left there and keep watching signs (on your left)
after about two miles from the intersection.

There. Happy now? :-)

Carroll's critique is based on "technologies ***which are in use in
the ARS***." That indicates a preservation of the status in which
Carroll is quo. If Carroll knows it and has practiced it, it is allowed
but everything else he doesn't know about is (seemingly) prohibited.

Amateur radio (be definition "not for pecuniary interest") is taken
as having no involvement with professional (activites done for
pecuniary interest) radio. Those definitions are seemingly the
rationales for claims of radio superiority over professionals by
some amateurs.

In what part of the EM spectrum has the FCC "sold amateur frequencies
to the highest bidder?"

Is this something new not covered in the FCC's Daily Digest? Or is it
some urban myth reborn out of a need to rationalize some paranoia?

The latest and recent-past EM spectrum auctions concerning new
radio services are on the FCC Wireless Telecommunications
Bureau home page. None of those are "selling amateur frequencies
to any highest bidder."

>It is a mistake to put all our eggs in the emergency communications basket.

Part 90, Title 47 CFR, has regulations for US Public Safety Radio
Services. The California Auxilliary Communications Service (ACS)
integrates amateur emergency communications into a statewide
emergency plan. Integrates, makes amateurs on an equal footing
with professionals. Omelettes taste better when mixed well.

Mistake. Error. Incorrect. "Lie."

The smiley indicates the expected response from those who
hear evil Citizen Boogeymen everywhere thousands of miles
from another's geographic location. Their receivers exceed
the physical limitations of radio, electronics, and the ionosphere
beyond rational beings' capabilities.

>>Why does Miccolis ask?
>
>Just wanted your opinion, Len.

I don't think so. Such a "question" submitted in public is a
rather obvious troll. If all that was wanted was an opinion,
such could have been asked in private mail.

>> This is not the proper newsgroup to discuss
>>citizens band radio.
>
>I'll take that as an unsolicited opinion.

It would be a mistake, an error, a faulty judgement to "take"
it that way. The title of this newsgroup is Amateur Policy.

Citizen Boogeyman, er, excuse me, Citizens Band radio
was created first in 1958 (UHF), then augmented in 1959
to add the 11 meter telecommand and communications
classes. Some radio amateurs have complained bitterly
about the "theft" of their beloved, wholly-owned, ordained
by God spectrum space on HF...for 42 years.

This newsgroup is titled as being for AMATEUR RADIO
policy. Citizens Band Radio Service is not classified by

the FCC as amateur radio, has its own Part within Title
47 CFR (95).

>>>Would you hold up the Citizens Band Radio Service, as it exists today, as
>>>an example of how that Service should conduct itself?
>>
>>No. There are far too few channels for the number of users based
>>on reception in the Greater Los Angeles region. That is a subjective
>>opinion based on the number of "heterodynes" heard on each of the
>>forty channels.
>
>OK

Over a dozen years ago I came across some Electronic Industries
Association (EIA) statistics indicating over 10 million CB radios
had been sold to US customers. Those were the 11m voice units
formerly called "Class D" in the 1959 regulations. In that same
time period there were 40 channels allocated for CB voice. It is
fairly obvious that, if all were on the air at the same time and spread
evenly across the allocated spectrum, that would make it a quarter
of a million users per channel.

The above is an exaggeration, of course. Not everyone is on the
air at the same time nor are they spread evenly among 40
channels. Just the same, there is a crowding in a narrow
EM spectral region that far exceeds what occurs in the most
crowded amateur bands during DX contests. [some amateurs
will object to that since they exaggerate ten to twenty to thirty
ham stations vying for a rare DX attention as "thousands"]

Is there any wonder that a few CB enthusiasts go beyond
allocations into freebanding? That's no excuse for illegal
action on their part, but neither is it worthy of some Hue and
Cry for Capital Punishment for the evildoers by some hams.

Radio amateurs should police their own bands first in order
to justify a self-righteous "opinion" of their own "superiority"
in all radio.

>>>Would you hold up the Citizens Band Radio Service, as it exists today, as
>>>an example of how the Amateur Radio Service should be conducted?
>>
>>No.
>
>OK

That's a very blatant TROLL question, an attempt to manufacture
some "dispute" for the sake of fighting, for a catharsis of personal
opinion-and-frustration by the self-righteous. Standards and
practices of today's amateur radio, including procedure, jargon,
and everything else, is no role model for other radio services.
Such hasn't even been divinely ordained, yet is included in many

amateur liturgical documents.

>> Why would that even be a question, other than trolling? :-)
>
>Just wanted to know your opinion, Len. Thank you for sharing.

You are welcome. It would be prudent to remember an old
saying about "asking for what you want...you may get it."

CB was created by the FCC 42 years ago. The 40 meter band
allocation changes began at WARC-79, 22 years ago. That
40 m issue HAS NOT BEEN SETTLED IN 22 YEARS' TIME.

The ARRL does not represent CB radio (see subject thread
header of "Can we sue the ARRL? Yes we can."). It represents
US amateur radio (by their own claims). Both the ARRL and
IARU keep talking about the 40 m issue, yet nothing but talk
has been done yet to settle it. 22 years of such talk. It would
seem prudent to concentrate on amateur radio matters such as
that rather than yet-another-castigation of CB radio.

The 40 m issue does not concern me. Have a blast with it.

Palm Springs Regional, Leona?? Kinda far, don;t ya think?

I-70 Leona?? somehow I don't trust your sense of direction there. Maybe I have a defective map, but according to the one I have, I-70 actually ends in Utah where it meets I-15. Now there is an I-15 that passes through the outskirts of Los Angeles. There's an I-10, but since you are the anal retentive of non mistakes, I can only assume you are trying to trick me you silly wabbit.

As to local airports, closer to you, I was thinking more along the lines of Santa Monica Municipal (SMO) or perhaps Compton/Woodley (CPM). They offer reasonable landing fees and don;t require advance notice.

But that's really not any concern of yours. Looking forward to coffee and danish, Lemon's OK..no prune or cheese

You mean you have to ask, after all their rantings right here on rrap?
How about NCI and all their supporters, who have clearly shown their
enmity toward CW and everyone associated with it? THEY avowed it, not
us.

What you wrote was: "Where did I write we didn't have to justify our
existance?" So do we or don't we have to justify our existence? Your
choice of passive voice masks the necessary action, if action is
indeed necessary.

I didn't think so either, given that I did not one trick of CW operating during my 5 year military stint. But....somehow NCI et al seem to see anything a CW supporter does as somehow alien and of enmity to the "people".

What is a 100% sure bet is that I didn't take that exam. But, given the license manuals, there's no reason to think I wouldn't have achieved a perfect score. After all, the 1957 ARRL License Manual had 25 pages of Extra stuff to memorize. The Y2K ARRL Extra License Manual had 359 pages.

Webster's Ninth New Collegiate Dictionary:
"outdated - outmoded"

Webster's New Universal Unabridged Dictionary:
"outdated - outmoded"

Neither dictionary even mentions "obsolete" under "outdated".
Sorry, Vince, you lose. Many things are outdated which are
not obsolete. Please stop trying to put words into my mouth
that I didn't say. It's tantamount to lying and an indication
of desperation on your part.

Assuming that such people exist, do they not have the right to hate whatever and whomever they choose? Are you a member of the feeling police, Dick? Do you dispense capital punishment for wrong thinking or just torture people into submission a la "1984"?

I personally don't know anyone who hates Morse code. However, I know some people who hate the Morse code affirmative action program administered by the feds because of S25.5. What is wrong with freedom of choice of modes in a hobby in a free country?

Someday you are going to have to learn to read, Dick. The NCI web page
says they don't have enmity toward CW or anyone associated with it.
What they object to is the federal affirmative action program for Morse
code testing. It ceased to be necessary decades ago and is simply an
outdated artifact left over from earlier days that needs to be discontinued.
You continue to be confused about CW VS Morse code testing. Nobody hates
CW. Lots of people hate the Morse code testing requirement, maybe even
the majority of hams.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Actually, that's not quite true, according to what I read.

Spielberg did not quit.

He just did not renew. Or actually indicated he would not
renew.

And he did not say it was because of the BSA stand on
gays. What he DID say was that he felt that his renewing
and remaining a member of the board he was on was
construed by some people as his taking sides in the
issue with the BSA.

So... He did NOT quit. He did NOT say the BSA was
wrong or right. He's staying out of it.

Mike

You continue to be confused, Dick. NCI doesn't object to CW or CW supporters.
NCI objects to the federal Morse code *testing* affirmative action program.
What is it about "Morse code testing" that is so hard for you to comprehend?

Bill:

Yes, my friend, I do disagree with it, and you're absolutely
correct about the decision being out of the hands of ham
radio operators. I assure you that I am firmly grounded in
the reality of the situation. However, here we are debating
the underlying philosophy of the code/no-code debate. I
have already accepted the fact that the decision to undo the
code requirements are the new skyscraper on the skyline,
blocking out both the Sun and the Moon. This is one of
the many reasons why I now advocate the reallocation of
as much of the valuable spectrum above 500 MHz out of
the hands of wasteful, unproductive, and technically
ininvolved "consumers" of this formerly worthwhile hobby.

> Feel free to comment to those policy makers that
> you beieve the end of code testing is just a sign
> of their imaturity in making the decision to do so.

I would rather attribute it to their lack of first-hand knowledge
of the true value of maintaining a pool of amateur radio
operators capable of proficiently employing the Morse/CW
mode.

If he has renounced the Boy Scouts (which is exactly what it appears he has done), he is a "former" Eagle Scout. You cannot renounce an organization and then turn around to claim a title in that organization. The world doesn't work that way, Darryl.

There is nothing "ad hominem" about calling someone a "baldfaced liar" if
they are indeed lying.

Some people can't "debate" without rapidly escalating the "debate" to a
shouting match. They have little or nothing to "debate" with, and/or are
unwilling to accept known and established facts when presented with them.
Thier last resort is name calling and fighting.

Oh well.

Steve:

Oh well, indeed! While I'm not claiming to be any kind of a saint in this

You make the mistake of assuming the main opposition to homosexuality is coming from the religious community. In reality, just as many (nearly the same percentage) who claim no religion are opposed to homosexuality as those who do claim a religion. Therefore, your "God Squad" nonsense is nothing more than a load of BS.

> I invite readers to perform an experiment.

> come from the mother.

Now, what in the heck does that have to do with sexual gratification through homosexuality? By inject that into this conversation, you seem to be suggesting that homosexual men have short ring fingers like a female (which is as absurd as your "God Squad" nonsense).

> [snip] When the International Olympic Committee,
> suspicious of the East German ladies, asked for
> a test to determine whether they were in fact
> women, the manufacturers of such tests told them

If they can determine maleness, they can also determine femaleness.
In normal human beings, there are only two sexes out there. If you're
not one, then you're the other.

> [snip] Face it, gang, to some extent being male
> is a birth defect.

Oh, brother. And are you now suggesting that we develop ways to fix
this "birth defect?" Oh, that's right, I see where you're going with
this now - homosexuality is the fix.

> [snip] It is perhaps incumbent on the mainstream
> to learn enough not to equate homosexuality with
> pedophilia; [snip]

I was not aware that anyone was equating anything with anything? In
fact, all most are doing, when discussing this subject, is pointing
out the tendency of many gay men to seek out young boys for sexual gratification.

Maybe I can offer a little insight here, Ed. While you and Cecil and
othres posting here spent much of your youth hanging out in the hippie
culture, presumabely looking for new and creative ways to avoid reality,
Larry and I were in the military getting a full dose of reality on an
ongoing, daily basis.
We learned that you don't neutralize an avowed enemy by pandering to
his every whim.
Do I believe that ham radio has enemies which do not wish us well? A
good number of whom are present amongst us? Does a bear live in the
woods?

Dick:

Thank you very much for your most gracious support. Truly, you
understand a great deal more about me than others in this group could,
due to having, like myself, sacrificed the most valuable and productive
years of your life in the service of our country. My military experience
was one of hard work, long hours, the high stress of constantly being
forced to perform multiple tasks at once. I also faced the responsibility
of supervising quite large groups consisting of more than a fair share of
weak, lazy, and unmotivated people who were more interested in
their own comfort, convenience, and the benefits of their service than
they were in earning them. I carry quite a great bit of resentment over
the way the military was used as an alternative form of welfare --
saddling smart, hard-working, motivated, and dedicated people with
the arduous task of carrying an equal number of the opposite types
on their backs. Many times I have had to take a back seat in job
opportunities when they were given to less deserving people who, for
reasons that had nothing to do with their job performance. I then was
made to "work for" these people, and make them "look good" by
doing my own work in addition to theirs, while they continued to
massage their careers with square-filling activities which had nothing
to do with the mission of the workcenter. When they did involve
themselves, they usually made decisions which only placed a

greater burden on the good workers, without providing adequate support.

I had a great deal of bad luck during my Air Force career, with regard to the type of people I had to work with and work for. My own subordinates were, for the most part, appreciative of my efforts to properly support them when they demonstrated to me that they were as seriously concerned about the mission as I was. One way I gave that support was to get rid of as many bad apples as I could, in order to not force them to have to carry that dead weight on their backs. I just wish some of my own "superiors" had shown me the same courtesy.

I admit that I carry a great deal of this "baggage" into the C/NC debate, with the desire to demonstrate my support for the strong, traditional values of the Amateur Radio Service. I fully understand that the Morse/CW mode must share a great deal of the average ham's time and attention with all other modes. I, myself, am quite enamored of the digital non-voice modes, but due to the fact that I was required by then current licensing standards to learn to effectively employ the Morse/CW mode, I am now a True Believer in the value of that particular communications skill. I also believe that being required to learn this skill at a practical, effective proficiency level, also led me to become a more technically-involved amateur, though I do allow that good technicians can contribute valuably to the service without it. Unfortunately, good technicians are among the minority in our now mostly consumer-oriented service.

I hope this provides some insight to others on the position I hold within this ongoing debate, and why I continue to participate therein. You obviously understand, for reasons which are both commendable and appreciated by myself. Again, I thank you for your support.

Not necessarily. Masking of necessary action was not the intent of any of
my remarks. The intent was just as I stated. So go blow it out your ear.

From the 1957 ARRL License Manual: "If our answers sometimes seem to the initiated to be naive or incomplete, rest assured that they are sufficient for the purpose." What is it about "sufficient" that you don't understand?

Got news for you, Vince. Nobody died and made you the dictionary god.
I used the word "outdated" and "outdated" is exactly what I meant.
You dishonestly tried to substitute the word "obsolete", a word that I
didn't use. Better go practice your mind fornicating ways on someone
else - it's not working on me.

"Obsolete - no longer in use" That's obviously not true about CW
or Morse code testing and that's why I did NOT use the word. That's
your word, Vince, not mine. Please cease your feeble attempts at
mind fornication.

Well, you're wrong every which way, Cecil. The better
dictionaries, including the better on-line ones, provide one or
more of the following for the definition of "outdated"---old
fashioned, obsolete, archaic, outmoded, no longer in use. So
you're wrong when you say "outdated" isn't equivalent
to "obsolete."

Second, the better dictionaries provide the definition for
"outmoded" as "no longer current," "not acceptable by present
standards," and "gone out of style."

Since Morse is in wide use, neither can you say that Morse
is outdated/outmoded. You don't win this one either, Cecil, even
with your chosen use of words!

Good dictionaries, Cecil, list the following for YOUR word
"outdated"---old fashioned, obsolete, archaic, outmoded,
no longer in use. So outdated is synonymous with obsolete,
any which way you turn it. Outdated is also synonymous with
outmoded, as you state. Unfortunately, outmoded means
"no longer current," "not acceptable by present standards,"
and "gone out of style," among others. So since CW
is still in wide use, you can't even say that it's
outdated/outmoded, as per your claim.

Cecil:

Just exactly what do you "hate" about the code testing requirement(s)?
Hate is a pretty powerful emotion, and there is always an underlying
reason for it. I'm curious to find out where this passion comes from.

I also used to "hate" the Morse code testing requirements, but that was
because, at the time, I possessed a very immature, irrational, self-centered
and short-sighted attitude toward them. I wanted the instant gratification
of being able to communicate globally, preferably by voice, via amateur
radio -- without having to learn no steenking Morris Kode. My attitude
changed because I matured, and grew out of my selfish, insecure way
of thinking and was able to accept the requirement based on the fact
that it produces a valuable communications skill and the dividend of
greater operating privilege. What I want to know is -- what's YOUR
problem?

"Obsolete" means no longer in use. "Outdated" does not mean no
longer in use. I used the word "outdated". I did NOT use the word
"obsolete". Is mind fornication the only discussion technique that
you have left?

> Since Morse is in wide use, neither can you say that Morse

I didn't say that Morse is outdated. Here's what I said:
"As an entrance requirement, it is simply outdated and therefore
is in the act of being dropped."

What is it about "entrance requirement" that you don't understand?
Morse/CW is not being dropped. Morse code *TESTING* is outdated and
is being dropped.

True enough, Bill, but within the Amateur Radio Service, Morse code use is significantly higher than "occasionally." Within the Service, the code is not obsolete at all.

It is obsolete outside of the Amateur Radio Service.

"Obsolete" would be among the more mild terms used to describe a few of my cars! Though the "Deathmobile" (my '78 GMC pickup) does have a new clutch in it now. But the used 4-speed I put in it seems to have a spun bearing or two. But it still goes, and I am hoping it wears in. :-)

I imagine that more people use Morse code within the Amateur Radio Service than conduct emergency communications. Yet there are still questions on emergency communications procedures.

I still like your original idea of having a Morse code test as a part of the overall exam, with a reasonable number of questions about the content of sent text being included in the written exam. It is a compromise that puts Morse code on the same par as other operating modes and techniques that are "occasionally used" within the Service. Completely eliminating Morse code testing appears to be letting the pendulum swing too far in the opposite direction.

One of those laws is "thou shalt not kill." Should we get rid of it,
just to make you happy?

Until a little over a century ago, radio had not been discovered. Does
that mean that it didn't exist for those thousands of years of human
history which preceded that discovery?

They haven't yet. That's what we are trying to avoid. Of course, since
you are NOT a part of Amateur Radio beyond your own shortsighted agenda, you
wouldn't know that.

>Is this something new not covered in the FCC's Daily Digest? Or is it
>some urban myth reborn out of a need to rationalize some paranoia?

How would YOU know about anything in the Digest, Your Putziness? Only 5
days ago you stated that you are not subscribed to it.

And anyone who IS active in REAL Amatuer policy matters would know about
the recent attacks on Amatuer allocations.

>The latest and recent-past EM spectrum auctions concerning new
>radio services are on the FCC Wireless Telecommunications
>Bureau home page. None of those are "selling amateur frequencies
>to any highest bidder."

Not everything that threatens ANY allocation is on the FCC's pages. Ask
the folks at the ARRL about ONGOING moves against 2M and 70cm. You won't find
that on the Digest recently, but it IS a very real threat.

>>It is a mistake to put all our eggs in the emergency communications basket.

Fraid it is, Bert. I tried the "nice guy, roll with the punches" position
for several months, but some people in here can only be dealt with in certain
language and demeanor.

You just can't be a "nice guy" any more and have anyone appreciate that
simple virtue. I assure you that I have my patience and tolerance levels, but
some people CAN push the button sufficiently to let the sharks swim.

There are a few folks here that can't really face facts, nor can they
accept "I understand your point but I don't agree" as a response. A
(thankfully) few find it necessary to analogize anyone who is NOT of thier
particular opinion with neonazis, brownshirts, thugs, etc.

I don't tolerate that. No one HAS to tolerate it. No one should.

>communications technologies ***which are in use in the ARS***.

It is important to Amateur Radio that its communications technologies have relevance to the communications technologies in use in the rest of the radio world.

Had Amateur Radio not had such relevance when it was created, it would not have been created.

Had Amateur Radio not had such relevance after WWI and WWII, it would not have been brought back to life.

If Amateur Radio sets itself apart from the rest of radio techology, we are making a big mistake.

>>Just wanted your opinion, Len.

>I don't think so. Such a "question" submitted in public is a
>rather obvious troll. If all that was wanted was an opinion,
>such could have been asked in private mail.

For someone who has repeatedly refused to exchange such "questions" in private e mail rather than a public forum, this is quite strange. Not unexpected, in as much as Lennie the Licenseless has demonstrated that he does indeed have more than one face, taking frequent opportunities to show most of them.

>It would be a mistake, an error, a faulty judgement to "take"
>it that way. The title of this newsgroup is Amateur Policy.

A fact that you only adhere to when it suits you.

>Some radio amateurs have complained bitterly
>about the "theft" of their beloved, wholly-owned, ordained
>by God spectrum space on HF...for 42 years.

Display of virulent anti-Amateur Radio attitude noted. Again.

>This newsgroup is titled as being for AMATEUR RADIO
>policy. Citizens Band Radio Service is not classified by
>the FCC as amateur radio, has its own Part within Title
>47 CFR (95).

And again pointed out that this is a fact that you adhere to only when it suits your particular rant. Changes in other radio services frequently DO impact Amatuer Radio and must and should be discussed by those who are TRULY interested in Amatuer POLICY matters, not just personal agendas intended to salve "professional" egos.

>Radio amateurs should police their own bands first in order
>to justify a self-righteous "opinion" of their own "superiority"
>in all radio.

According to The Chief Enforcer of the Radio Realm (read that "Riley"), we are already doing a grand job, although there is always room to improve.

Unfortunately, the encroachment on 10 meters and seemingly other bands now (notably 40 and 12 meters) demands that we pay attention to what is going on outside our allocations.

>>>>Would you hold up the Citizens Band Radio Service, as it exists today, as
>>>>an example of how the Amateur Radio Service should be conducted?

>>>No.

>>OK

>That's a very blatant TROLL question, an attempt to manufacture
>some "dispute" for the sake of fighting, for a catharsis of personal
>opinion-and-frustration by the self-righteous.

No it wasn't. You frequently assail us with your lengthy CV of
"professional" communications experience. It was a simple question. I asked
you the same question and you ignored that too.

>Standards and
>practices of today's amateur radio, including procedure, jargon,
>and everything else, is no role model for other radio services.

Who said it was? Who, Lennie? Post quotes, please.

>Such hasn't even been divinely ordained, yet is included in many
>amateur liturgical documents.

WHAT Amateur Radio related "documents" have made any such claim?

WHICH documents say "Amateur Radio" techniques are THE techniques that
should be applied to ANY OTHER radio service, Lennie?

You are, of course, again lying. I expect no answer and I doubt that you
will disappoint me.

Thanks.

>You are welcome. It would be prudent to remember an old
>saying about "asking for what you want...you may get it."

We would prefer a professional, informed opinion. Not one based upon your
anit-Ham rhetoric.

>The 40 meter band
>allocation changes began at WARC-79, 22 years ago. That
>40 m issue HAS NOT BEEN SETTLED IN 22 YEARS' TIME.

Unfortunately the "40m issue" is one that involves over 150 other soverign
entities with their own agendas, and ITU matters are only dealt with in 3-5
year increments.

> Both the ARRL and
>IARU keep talking about the 40 m issue, yet nothing but talk
>has been done yet to settle it.

Not true, but it makes you feel good saying it.

>22 years of such talk. It would
>seem prudent to concentrate on amateur radio matters such as
>that rather than yet-another-castigation of CB radio.

Yeah...keeping unlicensed freeloaders off of Amateur allocations is highly
over rated.

Right.....

>The 40 m issue does not concern me.

Then why the snotty slap at the on-going efforts to realign the band?
None of your claims was true, but you felt it necessary to abuse us with them.

>Have a blast with it

Those of us with a license will. You can sit there and watch us play.
Enjoy.

>of Santa Monica Municipal (SMO) or perhaps Compton/Woodley (CPM).

WHOA! I wuddn't "do" CPM if I hadn't been there before, Jonathan. It's in a developed area and the runway has concrete walls at either end...literally.

I watched a fellow try to make a full-stop landing there despite being high when over the numbers. He should have gone around, but you could tell he was determined to put it down, "no matter what". He did get it down and brought to a full stop before he got to the wall, but there was not enough room from the spinner to the wall to squeeze between.

He got out, handed the keys to the FBO operator and walked away.

If you're not flaring when you are over the REIL lights, go around.

Radio waves are natural occurrences and ignorance is not proof of non-
existence. Please provide some objective evidence that a supernatural
realm exists.

Thanks for the heads up. This will be my first trip to the left coast in
a private, so any tips like this are certainly appreciated.

Got an e-mail from a friend about a website for all the SoCal airports
and they even have pictures.

http://www.airsports.com/airports/

Am I wrong, is CPM a dirt/grass runway? Maybe it's a bad picture
(aerial view) but you can see those walls you were referring to, and
what's this No Tower!!!??? I hate those. They have several in New
Jersey...another name for them is Bump and runs. Two planes landing
bumping into each other and then everyone runs to avoid the falling
flaming debris

What do you know about VNY or BUR. Both actually seem closer to Leona
that CMP or SMO. Looks like Burbank is a better option although it
seems to have more traffic considerations due to the proximity to LAX,
Van Nuys and Whiteman.

Still plenty o'time to decide. Poor little Leona, suggested coffee and Danish at a place of his choosing and he turns it into confrontation. Too bad. I would have even bought. Heck, he could have invited his wife. Vegas odds on LennieNoShow 29:1

Thanks again.

3063. CB Channels Now Expanded...???

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-19 14:28:08 UTC
From: k4yz@aol.com
Message-ID: <20010419102808.25013.00000236@ng-mq1.aol.com>
Source record: 7313

Lennie the Lame has made a point (as have several others) that the shennanigans of some CB radio operators are not "any of Amatuer Radio's business".

I refer the unbelieveing and the contrary to "www.coaxkid.com/chart.htm". There you will find a "Channel Chart" of "CB Channels" for export rig users and those who have "exapnded" their domestic rigs.

You will note that the chart starts at 25.165 mHz, a full 1.8 mHz below the legal CB band.

The chart then goes up to 29.655 mHz, covering all except 5kHz of the Amatuer 10 meter band.

This is not an isolated occurence, nor is it the fantasies of one errant CB/Freebander. Anyone who takes the time to just coast up and down the band will find that this is a VERY prevelant problem, and that indeed these "channels" are in use by other than the intended services and licensees.

This is not ""Chicken Little" nor is it any misplaced paranoia. It's happening, and it IS our problem. If WE do not take steps, within the framework of FCC regulations and other civil law, to stop this, it is OUR fault.

We cannot allow it to go any further.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

You remind me of a statement made by my favorite schoolteacher from
the eighth grade, mid fifties. He once said to the class, when
discussing futuristic things, that it seemed likely that someday humans
would evolve to where a human was just a big blob with a single thumb,
with which to push buttons.
He was being facetious. But evidently that's your view of the future.
In your view all anyone needs to know is how to consume.

Only a character like you could make such a comparison. Of course the source of the belief is the critical element. There is no doubt about the source of Larry's belief (and mine) in the efficiey of radiotelegraphy. It has 100 years of factfilled history to stand for it.

Exactly how many vacuum tubes have you built by hand, Dick?
How many capacitors have you ever rolled out of foil and
paper? How many pencil leads have you converted to resistors?
How many grains of silicon have you ever found at the beach
that would amplify a signal? The only difference between the
time you got your ham license and now is the level of
integration. Your black boxes were tubes. Today's black
boxes are transceivers. The basic concept has not changed.
Are you really that blind to reality?

No, it means that yoiu are still full of crap.

It
> is not a graduation certificate.

That's curious. If it is so, why didn't you 'enter' long ago? It was
always a certificate of accomplishment, one that said you have reached
the highest level of amateur radio, not some beginners level. It didn't
test to see if you were learned enough to begin to learn to be an Extra.
You're so full of crap your eyes have turened brown.

Actually it's pretty clear, Larry. He was never able to meet the code
requirements for Extra until they were virtually eliminated, so he is
compelled to 'prove' that they were never proper in the first place.

I never needed an Extra license, Dick. But my good friend was barred
from the HF ham bands for 25 years. Now he is an Extra. Exactly what
was gained by barring from HF ham operation an engineer with a commercial
radio license and 25 years of experience as an AM broadcast station chief
engineer?

Yep, there's no doubt that it is part of your religious cult beliefs.
But you are free to have whatever religion you choose, Dick. The topic
is not the "efficiey (sic) of radiotelegraphy". The topic is the
Morse code *TESTING* requirement. I agree with the FCC on that topic.

For a start how about convincing Hams, who feel if the "freebanders" are not on 10m it not a problem, to change their minds! I feel too many Hams ignore the larger picture because it does not impact them directly, yet. Worst still is why would anyone work to get any kind of Ham license to work H.F. when one could get a cheap export rig, amplifier, and work DX without one. Could that be one factor to explain the slow, or no growth in the number of new licenses? To allow the situation to continue would amount to creating a second "hobby radio service" competing with the amateur service, but with out any license requirements, and regulation.

Once the "freebanders" feel safe, operating anywhere on the 11/10m band, how long do you think it will be before they move in mass to other bands to try their luck there? Not only are "export rigs" a problem. but many of the "freebanders" now use modified newer all-band Ham H.F. rigs too. All they need to do is hang up a dipole for the band of their choice, and spin the VFO knob, then we have a problem.

> world.

Yes, in that they are actually communications-capable. And relevant to
communications needs in times of distress or disaster. It is curious
that many posting her in opposition of code testing would rather not
have any communications capability rather than to acknowledge that
radiotelegraphy, in fully successful use for over a century, be kept
available within the ARS.

>
> Had Amateur Radio not had such relevance when it was created, it would not have
> been created.
>

The history I read says that it was all amateur radio initially, even
Marconi himself always claimed to be an amateur.

> Had Amateur Radio not had such relevance after WWI and WWII, it would not have
> been brought back to life.

Oh, it's relevant, all right. It has filled in more than adequately on
many occasions. And shall in the future.

>
> If Amateur Radio sets itself apart from the rest of radio techology, we are
> making a big mistake.

Uh, Ed, I think our Gov't already set Amateur Radio apart from other
services long ago, around the time of "Two Hundred Meters and Down". As
far as "from other technologies", I have seen nothing whatever from
ANY CW supporter which even remotely can be construed to mean any such
thing. Keeping a CW test for amateur lciensingf is in no way "orienting
the ARS away from modern technology" but instead keeping a more full

complement of communications assets available for future use. It would be of great assistance if the ARRL, instead of wimping all the time, would actually spend jsut a little effort in educating new hams of the value of them learning CW so that they might at least understand what it is about, instead of just pandering to their lack of knowledge, and cowing before NCI and its lackeys. Magfazine articles such as "The How and Why of CW" by Bob Shrader W6BNB in the February 2000 issue of CW magazine help, but it looks like ARRL could have something on its website on the subject. Not all newcomers read magazines.
For you to suggest that our belief that radiotelegraphy, the most basic radiocommunications mode, should be kept alive and viable for future use within the ARS is denying other newer technologies- that is more than being simply disingeneous, it's downright abusive.
I challenge you - how many DSP based communications terminals do you have in your station? How many does W6RCA have? It will surprise me greatly if the two of you combined own more of them then I do. I even gave one to my son in law to get him started in digital comm.

Marconi was businessman and a promoter. Contrary to popular myth,
he never invented a thing, but took available technology and showcased
it to promote his business. Today we would call him a "system integrator".

His "support" for amateur radio was a shrewd ploy to ensure a large
supply of QRM for the Navy, so that they would buy his more selective
receivers.

>> What can we do?

(1) Realize that the longer you stay silent, the more prevalent the
problem becomes

(2) Write your representitives that you expect the FCC to carry out thier
job of enforcement, and you expect them (Congress) to fund the FCC accordingly.

(3) Listen to our bands. When you hear this kinda BS going on, log it
and forward it to Uncle Riley and company. Record it if possible.

(4) Remember it IS our problem. Let the FCC know you have no intention
of tolerating it.

>For a start how about convincing Hams, who feel if the "freebanders" are not
>on 10m it not a problem, to change their minds! I feel too many Hams ignore

BAM! Leland lays one right on the head. Solid smack.

>Worst still is why would anyone work to get any kind of Ham license to work
H.F.
>when one could get a cheap export rig, amplifier, and work DX without one.
>Could that be one factor to explain the slow, or no growth in the number of
>new licenses?

I don't really think so although it's certainly a possibility. I think
there is a misconception that Ham Radio is all about 100' towers, walls-full of
equipment, and a degree in engineering to acquire an Amatuer license. THAT'S
the myths we need to dispell. Getting the word out about the now adolescent
aged no-code license will help too.

I have heard many CBers state they don't get into Amateur Radio because of
the cost, yet they already have the same amount of money invested in CB that
could get them a good station for Amateur service.

>To allow the situation to continue would amount to creating a
>second "hobby radio service" competing with the amateur service, but with
>out any license requirements, and regulation.

It's already been "created". When the FCC washed thier hands of Class D
CB they in effect said that's what they were doing. Maybe not officially, but

that's exactly what happened.

>Once the "freebanders" feel safe, operating anywhere on the 11/10m band, how
>long do you think it will be before they move in mass to other bands to try
>their luck there?

BAM! Another one on the head. And it's already happening. Tune 28.000 to
28.135 and listen. They are higher, but not as many.

> All they
>need to do is hang up a dipole for the band of their choice, and spin the
>VFO knob, then we have a problem.

BAM! The nail sinks all the way in, even if a bit late. They are already
doing THAT too. Listen to 6600kHz, 6955kHz, 6985kHz, and others.

I don't think we need to see much more to see that part of the perpetuation of "flaming" comes from cowardly sideline sitters who have nothing themselves constructive to add.

Not that I expected anything else from Hansel the Heartless. The very same form and fit of Lennie the Licenseless, and just as ineffective:

>In a sudden fit of patriotism, Major Steve Robeson LPN of the Radio Militia™
>donned his camo-fatigues with "KB1CCE" embroidered on the ass, and blurted
>out a bunch of old news, and concluded with:

Of course since it's been discussed before, per Hansel's logic, we should not discuss it any further.

(yeah....right)

And of course Hansel, like Lennie, despite an alleged lengthy professioanl career, can't seem to express his points without profanity or gratuitous insulting examples examples.

>Who is "we" and what is it that "we" plans to do, Nursie, other than scribe
>plaintive jeremiads here on rrap?

Nothing that involves you, Hans. Obviously you are "part of the problem" from the old addage that states "If You Are Not A Part Of The Solution, You Are Part Of The Problem".

Seems to fit. Perhaps a really good reason why the Hams of MN didn't lose any tears over your lackluster term in office as SM of Minnesota?

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

Leland and all,

This is a serious problem. Yes, we must get in touch with our Repre-
sentatives and begin making them aware of the problem and the further
consequences if it is not nipped in the bud (so what if Barney Fife
said it) NOW! As mentioned, the pirates are edging closer to the
international HF aviation bands. That is the ONLY weapon we have. If
we make our voices heard loud and clear, when various Reps begin hearing
the same complaints loud enough and long enough, they will act. This
is what happened with the "local enforcement" law got passed. However,
this approach has not achieved any noticable results. The emphasis
should've been placed on re-arming FCC with the funds and personnel to
do the job in order to address the broader problem. Again, if SOMEBODY
doesn't get off their (read that OUR) collective butts and use what
tools we have to combat this problem, it IS going to get worse and
worse. Maybe Congress won't care if CBers overrun the Ham bands, but if
they can be made to see the dangers of allowing them to continue to op-
erate illegally there and the extent of their encroachment onto public
service and safety HF bands, they WILL do something.

Nobody wants to make radiotelegraphy unavailable within the ARS. Some
of us simply want radiotelegraphy to stand on its own merits and not
be artificially propped up by a governmental affirmative action program.

Len, DAMN IT!

It takes two to tangle, and your argument with "funguy" et al, has nothing to DO with ham radio at all. This is a NEWSGROUP, for gosh sakes! It's like saying John is Mad, John is also a Democrat, so, therefore, ALL Democrats are MAD! Even if the subject being argued is ham radio, it is an INDIVIDUAL argument between 2 or three people. The extraneous responses you get from some others is the result of their being denigrated by association--just like mine now. Why can't you AND funguy just let it GO!!?

Words are cheap, Dick. Exactly what are you doing about it? Please
be action specific. Your rantings and ravings don't seem to have
had a very large effect so far.

The FCC has the responsibility for enforcement. Does it do any good
to report lawbreakers to the FCC? Is the FCC more likely to respond
to a lawbreaker within a ham band than a lawbreaker outside a ham
band? Can a system be set up at the ARRL to screen and funnel violation
problems to the FCC? How about an organization called "No Freebanders
International" with yourself as president?

This topic comes up from time to time on the CB news group. The "typical"
answer I get, when asked why many freebanders, etc., don't get a license, is
the comment I posted. They say "why get a hammie license when I can do
everything you can do with out one." And without any meaningful FCC
enforcement activity, on or about 11m, they have a point.

If "working DX" is ALL they are interested in, they may have...but WHY face the fines and possible loss (per confiscation) of their equipment? The tests are NOT that hard to pass.

Not everything "Ham" occurs between 1.8 to 29.7mHz. HF may be "the sizzle", but the rest of it is the whole steak.

(1) Move down to 40 meters (and thereabouts) as they already have.

(2) Move to 151mHz, again, as they already have started.

>had a very large effect so far.

Indeed, as have the rantings of others. However that need not be the case
in the furure.

>The FCC has the responsibility for enforcement.

Just as your local PD or Sheriff has the responsibility for law
enforcement in your town...however they too depend on the support and
cooperation of the persons in the community. Just as WE should be helping (and
encouraging) the FCC to go after these ner'-do-wells.

K1TTT has a neat idea. He's got a bounty out on anyone caught bootlegging
on 10 meters. I promised to pony up $50 for the kitty if he gets a taker.

>Does it do any good to report lawbreakers to the FCC?

Do I detect an air of apathy? The same apathy that sees local crimes
occur but left unreported "cuz it's the cops job"...???

>Is the FCC more likely to respond
>to a lawbreaker within a ham band than a lawbreaker outside a ham
>band?

They have been pretty righteous about getting the pirates at 6955kHz. I
bet with a bit more information to go on they will bust others too. Make the
local CB scofflaw the next target of a t-hunt, then get the "participants" to
submit what they fiond to the FCC.

No...no vigilanteeism, no knocking on doors...just find 'em and rat them
out.

>Can a system be set up at the ARRL to screen and funnel violation
>problems to the FCC?

Already exists. Too bad it doesn't get used more often.

In what part of the EM spectrum has the FCC "sold amateur frequencies
to the highest bidder?" Bidding indicates auction. Is there an auction
planned or posted by the FCC? This is merely a question.

Untrue. Unlawful conduct is everyone's concern.

This includes unlawful amateur radio activities.

What I stated under another thread was that standards and practices and procedures of amateur radio are not the example for citizens band radio nor the other way around.

> I refer the unbelieveing and the contrary to

>fault.
>
> We cannot allow it to go any further.

The civil radio regulatory body in the USA is the Federal Communications Commission. The FCC is open to suggestions, comments, information, and evidence of radio wrongdoing.

The keyword is evidence. Evidence is not personal opinion. Evidence is factual information of unlawful radio activity...in any radio service. Such evidence can be recordings that

include dates and times of unlawful operation, frequencies, transmissions. Such evidence can be supported by approximate bearings from an observer's geographic location. Directional antennas are well-known in radio literature.

The alternative to citizens contacting their government on unlawful radio operation is vigilanteeism, itself against the law. Vigilanteeism is a two-way street, not a good thing to consider against another radio service when outnumbered at least ten to one. Vigilanteeism is wrong.

No need. Unwelcome telephone calls are treated with the
same courtesy afforded to telemarketers. None.

>Bank on it ;-)

No. The above anonymous intimidation was a poor attempt at "message poker" which didn't win any "pot." There was no "game" in progress except in the minds of a few furious individuals who cannot communicate through the written word other than scribbling insults as "replies."

Intimidation, overt or implied, only works on those who are able to be intimidated. I am not intimidated, only annoyed with the anonymous idiots who continue to act like they are still schoolchildren.

One they cannot do is talk to law-abiding hams, at least not for long.
Ask them how they talk to their ham friends.

It's not apathy, Steve, maybe it's reality. The local cop is my younger cousin whom I smacked up aside the head with a 2x4 regularly in our younger days. The FCC is not my cousin if you get my drift.

The point is, the discussion was in regard to 'justifying' amateur allocations. If the FCC were to change its stance and decide that the allocations were no longer 'justified', the amateur spectrum would presumably be reallocated. In the past few years a prevalent means for allocating frequencies has been by auction. Unlike other bidding processes, things being sold at auction go to the highest bidder rather than to the lowest bidder. Leo is apparently unfamiliar with such concepts.

>Subject: Re: CB Channels Now Expanded...???
>From: lenover21@aol.com (Len Over 21)
>Date: 04/19/01 3:12 PM Eastern Daylight Time

>>Lennie the Lame has made a point (as have several others) that the
>>shennanigans of some CB radio operators are not "any of Amatuer Radio's
>>business".

>Untrue. Unlawful conduct is everyone's concern.

You have, on numerous occassions, stated that Amateur Radio operators
should not be concerned with the activities of NON hams.

That you may have said something to the contrary in one thread means
nothing. You changes faces so quickly as to be untrustworthy and
contradictable.

>What I stated under another thread was that standards and
>practices and procedures of amateur radio are not the example
>for citizens band radio nor the other way around.

No one was addressing radio technique or practice. We were discussing
illegal activities.

Please pay attention if you are going to comment here.

>The civil radio regulatory body in the USA is the Federal
>Communications Commission. The FCC is open to
>suggestions, comments, information, and evidence of
>radio wrongdoing.

That's waht I said. No vigilanteeism's...just report what you know.
Thanks for reiterating the obvious.

>The keyword is evidence. Evidence is not personal opinion.

Again, I stated that clearly. Obtain information and relay it to the
authorities. Why do you seem to have a problem with that, Lennie...???

>Such evidence can be supported by
>approximate bearings from an observer's geographic location.
>Directional antennas are well-known in radio literature.

No kidding, Lennie? I didn't know that. I believe that I stated that
using a "bandit" as a foxhunting target and then reporting that information to
the FCC would be a proper course of action. I SPECIFICALLY said "no door
knocks". Just find 'em and report 'em.

>Vigilanteeism is wrong.

I believe I said exactly that, too.

Steve

In article <3ADF20E5.752F@bellsouth.net>, Jerry Oxendine
<joxendi@bellsouth.net> writes:

>Len, DAMN IT!

Profanity will not make your point in this newsgroup (there are too
many in here of victorian tastes who think that is smut).

>It takes two to tangle, and your argument with "funguy" et al, has
>nothing to DO with ham radio at all.

A lot of wasted bandwidth concerning Steven Spielberg and the
Boy Scouts isn't about ham radio.

A lot of discussion on Marine Radio isn't about ham radio at all.

A heap of abuse piled on CB might be justified
because the FCC stole the wholly-owned and operated
11 meter band from US radio amateurs 42 years ago.

Oxendine has posted to all of those threads...and a couple of
others which have nothing directly to do with amateur radio.

>therefore, ALL Democrats are MAD!

Political parties and their faults/goodies have little to do with
amateur radio...despite an extraordinary amount of political
party talk going on in this newsgroup after the General
Election. That isn't ham radio stuff either.

>Even if the subject being argued is
>ham radio, it is an INDIVIDUAL argument between 2 or three people.

That is the norm for 99+ messages in here.

>The
>extraneous responses you get from some others is the result of their
>being denigrated by association--just like mine now.

Oxendine posts an extraneous response and somehow I have
"denigrated him?" Is this through some time-space warping
capability, including telepathy, that is granted under an amateur
radio license?

>Why can't you AND funguy just let it GO!!?

"Let go what?" It is difficult to hold onto something that doesn't
exist...such as self-professed ace holes, excuse me, ace haoles
of WW2 fighting skies who demand and expect physical

confrontations.

...now why must there continue to be a morse code test for amateur radio licences other than ITU-R S25.5?

Forgive me, morse code testing may not be about amateur radio? Inform the civilians who know nothing about nothing because they aren't licensed in the amateur radio service.

> One they cannot do is talk to law-abiding hams, at least not for long.
> Ask them how they talk to their ham friends.

That's a nice question. I gave some thought to it a while back and there is a way, sort of. Each issue of QST has a rather large list of SK's published. All one would need to do is find an issue about 5 to 6 years old or more, then look for a SK listing whose call sign is in the same district where they live. This needs to be done to reduce the chance that somebody will notice the antenna is pointed the wrong way when they talk to them. A simple check on QRZ or Buckmaster will revel if the license is still cataloged as being "good", not expired, and what class it is, and what name to use on the air if it is looked up. The reason for picking from an old listing is to reduce the chance that somebody will "remember" working somebody with that particular call sign. Of course it is not fool proof, the spoofed call may have belonged to a well known and very active operator, or the other party knows the ham whose call it is is a SK! The other problem would be QSL cards too. I think if somebody plays their cards right they can get away with this for a good while.

>Why can't you AND funguy just let it GO!!?

For the same reason he has been cajoling Amateurs in this forum for years now. He has nothing else to do except elevate himself on a self-carved pedestal. It's truly pathetic.

And trust me, he KNOWS exactly the nature of this forum. He will once ridicule someone who uses the "it's USENET, not Amateur Radio" arguement when HE does not feel that the persons behaviour fits "The Amatuer's Code", but then he will himself launch into tirades and bursts of profanity, immediately humiliating himself and anyone else in his profession.

Just relax, Jerry. Lennie isn't about to follow his own "rules", so might as well sit back and enjoy the fracas.

He is incapable of copying Morse code faster than 10wpm and has been diagnosed with a biologically based AADD. It seems to me to be akin to interrupt latency on a computer. He is an electronic genius, had no trouble with the theory exams, and was one of the first to upgrade using a code waiver. He is so knowledgeable of ham radio and radio in general that it blew my mind when I first found out he was a Technician since the 1950's. His experience changed my mind about Morse code testing.

> that there was no such thing as radio.

One cannot prove a negative. On the subject of God, one cannot even prove
a positive. I cannot afford to believe in things for which there is no
evidence. If I told you to have faith that a bunch of gods live under
the surface of the moon, would you buy it? If not, why not?

What laws are those, Cecil? I see laws based on common sense (murder, etc), laws based on accepted community standards (marriage, drugs, etc), and laws based on adopted standards (trade, business, etc), but I see no laws based on an assumption of the existence of a god.

> It doesn't disprove the existence
> of a God. It just makes God unnecessary.
> Homo Sapiens are not special at all.

Well, you're certainly free to view yourself that way, Cecil, but I hope you'll pardon me if I continue to view myself, and other human beings, as somewhat special.

Bounties and rewards sounds like a vigilante operation to me.

The word "amateur" in amateur radio refers to non-pecuniary
interest in radio activities.

What happens when the wrong person is accused due to bad
evidence?

In that hypothetical future, unjustified allocations would more
likely result in cancellation of the particular radio service.

>In the past few years a prevalent means for
>allocating frequencies has been by auction.

Untrue. Auctions have been used by the FCC to select a
service provider, national or regional, for a particular radio
service in frequency bands already selected and offered by
the FCC.

The FCC explains this in the "FCC Handbook."

>Unlike other bidding
>processes, things being sold at auction go to the highest bidder rather
>than to the lowest bidder.

What other auctions sell to the "lowest bidder?!?" :-)

What particular amateur radio bands are now under consideration,
or even hinted at being under consideration for reallocation? Let
the world know so that the black helicopters may be properly
fueled.

Please show evidence of "bursts of profanity." :-)

It is not possible to "know exactly the nature of this forum." This forum is about amateur radio policy. Those not licensed in the amateur service "know nothing" about amateur radio (repeated quote from the quoted individual) therefore cannot "know exactly" anything about this forum. :-)

Those blue laws are based on community standards, Cecil. Your community obviously has a good number of people who, for whatever reason (religion, or they just don't like drunks), don't want people to buy beer on Sunday. If those laws were truly based solely on religion, there would be no beer sales at all (any day of the week).

>> fault. We cannot allow it to go any further.
>
>What can we do?

1) Tape-record the intruder's transmissions
2) Send the tape and a letter detailing the intruder transmissions to the FCC.
Include date, time, frequency, signal strength, bean heading (if directional
antenna used), and any toher pertinent info you can think to include. Send them
to Riley Hollingsworth.

Cassette tapes are the preferred medium. Reports alone won't do it - the FCC
wants tapes of the actual transmissions.

DON'T make contact with the intruders, or try to deliberately interfere with
them.

No, it's just a question. I wanted your opinion. I'm still trying to figure out what you answer is supposed to mean. Please explain.

>If all that was wanted was an opinion,
>such could have been asked in private mail.

Why? The only reason I can see to move a discussion from a public forum to a private email is because one or both parties want the discussion to be

private, for some reason. I saw no reason to for that. In addition, many people consider uninvited email to be "spam" - that is, unwelcome.

That latter part is correct.

>Some radio amateurs have complained bitterly
>about the "theft" of their beloved, wholly-owned, ordained
>by God spectrum space on HF...for 42 years.

A few, sure. Not me.

US hams got the shared "11 meter" band immediately after WW2. It was added for a variety of reasons, the most obvious of which was cto compensate for the loss of 160 meters to LORAN. But in the years following WW2, hams got an exclusive 450 kHz band at 15 meters, and regained use of 160 meters a little at a time. The reallocation of 11 meters to other services was not a major loss.
>
>This newsgroup is titled as being for AMATEUR RADIO
>policy. Citizens Band Radio Service is not classified by
>the FCC as amateur radio, has its own Part within Title
>47 CFR (95).

True. But that is not the whole story. Actions by users of the CB service have had negative impacts upon amateur radio. For example:

- Hams are often blamed for RFI situations caused by CB users.
- The public often confuses the two services.
- Some CB users operate outside their assigned channels. Some of them even operate in the amateur bands.
- Amateur radio equipment has to meet certain FCC type-acceptance rules, not

because of misuse by hams, but because of misuse by CB users.
- There was a concerted attempt in the mid 1970s by the EIA to get the FCC to reallocate the 220-225 MHz amateur band to a new "Class E" CB service. (This effort was, fortunately, defeated).

>>>>Would you hold up the Citizens Band Radio Service, as it exists today, as

Sure - but that's hardly a reasonable scenario, for many reasons. For example, many of those 10 million sets are no longer in use.
>
>The above is an exaggeration, of course. Not everyone is on the

Actually, 53 years ago, 1948. That was UHF, but it was CB.

>The 40 meter band
>allocation changes began at WARC-79, 22 years ago. That
>40 m issue HAS NOT BEEN SETTLED IN 22 YEARS' TIME.

The issue of 40 meters is a lot older than that. It goes back to at least 1947.

>
>The ARRL does not represent CB radio (see subject thread
>header of "Can we sue the ARRL? Yes we can.").

Nobody I know of says the ARRL represents CB, or that it should do so. What's the problem?

> It represents
>US amateur radio (by their own claims).

All hams benefit by what the ARRL does.

>Both the ARRL and
>IARU keep talking about the 40 m issue, yet nothing but talk
>has been done yet to settle it. 22 years of such talk.

What would you have them do? Have you ANY idea of what the actual issues are, in the 40 meter question? Have YOU ever dealt with those issues?

> It would
>seem prudent to concentrate on amateur radio matters such as
>that rather than yet-another-castigation of CB radio.

When another radio service has an effect on amateur radio, that's a policy question that deserves attention.

Do you know why hams cannot buy external RF power amplifiers that work on the 10 or 12 meter amateur bands without modification? Do you know why they cannot build more than one amplifier of a given design for those bands per year?
>
>The 40 m issue does not concern me.

I am not surprised.

>Have a blast with it.
>
40 meters is my favorite band. I enjoy it very much. Hopefully, there will be even more to enjoy soon.

Yes, and it has also far outdistanced the ability of *anyone* to keep abreast of all its various and widely divergent branches and variants. But ham radio is not all that far reaching in its basic objective and means- to communicate by radio, using whatever means is at our disposal.

Leland and all,

OK, I have spent the better part of 3 hours composing a detailed letter to my Representatives explaining the problem, and asking that funding be restored to FCC to deal with this illegal activity. I, for one, am angry over these unlawful intrusions onto the Amateur Bands, and the activities of others on other HF bands. I had to edit the letter down to 3 pages! LOL!

This may be futile. The Reps *might* ignore my letter, or feel that it is not important enough to warrant attention. Again, maybe not. To me, it beats sitting around just "gumming" the issue to death. This is our most useful weapon. We, as a group, can't just go out and start pinning up coax, or slapping the snot out of outlaws, but we CAN write enough letters to get the issue noticed. My letters will go out tomorrow, not only to my own Reps, but to Mssrs. Feingold and Ehlers as well since they are responsible for the local enforcement bill, and will be some-what aware of the issue. True, I am not one of their constituents, but this is something that affects ALL of us as users of radio--some of us as users of other forms of utility comms besides Ham.

So. Who's joining me with YOUR letters?

Your exact words were, "because I am forced to live under a set of laws that assumes, without
proof, the existence of a God." Since you did not limit the scope of the laws you mentioned in any way, than it is only reasonable for a person to assume your were talking about all of them. Instead, it now appears you were talking about one law (no alcohol sales on Sunday) as that plural "set of laws."

> One cannot prove a negative. On the subject of
> God, one cannot even prove a positive. I cannot

> no evidence. [snip]

Then don't believe in such things, Cecil. Absolutely nobody is forcing you to believe, or not believe, in a darn thing. So why don't you extend the same courtesy and allow others to believe, or not believe, in what they want? Why must you constantly challenge the beliefs of others in these newsgroups?

And your nonsense about the laws against beer sales on Sunday just doesn't cut it, Cecil. If you don't like those laws, than attack those laws - not the religious beliefs of the people behind those laws. I have no problem with those laws at all, Cecil, and I'm not in any way religious. So what belief of mine are you going to attack in an effort to get me to change my mind?

Bert,

In essence, that was 'feel good' law, designed to get constituents off
their backs. While it *may* stop some interference, I am inclined to
believe that it isn't effective for the following reasons:

1. Local Law isn't qualified on the subject of electronics to discern
a legal radio from an illegal one. He *could* mistake a power supply
for a linear because it says "amps" on it.

2. *Would* they consult FCC for advice as provided for in the law
before declaring a licensed ham's station "illegal" and ordering
him off the air, or confiscating his equipment.

3. *Some* jurisdictions could smell money and attempt to go
after fines and fees. Opens the door for corruption on the
local level.

Having said that, won't you join me in writing to your Congressional
Representatives and asking that funding be restored to FCC to combat
this problem of illegal operations that has far-reaching consequences
if it is not stopped. Tis the only weapon we have!

Do you realize how silly that sounds, Cecil? You sound like a five year old saying "pee pee" instead of penis. The word is "nigger" - a word that has been in the dictionary just as long as the word "gay" to describe homosexuals. Sadly, if the thought police are successful at getting people to use "the "n" word," instead of saying the real word, then it will not exist in dictionaries of the future (several dictionaries have already caved in to the thought police and dropped it).

Guess I am not the enemy then. I could care less
about the code itself, I would encourage anyone to
make their own decision as to using code...it is only
the code test that I oppose because it has no rational
need to be.

Cheers,
Bill K2UNK

Most of the time it's because the US Attorney doesn't want to get involved in anything less than million-dollar asset forfeitures so the agencies are told not to bring cases to them.

I know of several cases that have excellent evidence but have been at the US Attorney for years. They have their own problems, too.

It comes to a head when the pirate gets involved in other criminal activity or causes harmful interference to public safety or government communications. Then the priority changes. Same with CB.

I DON'T believe you said that, Lennie. You make liberal use of profanity
to (uneffectively) emphasize your comments.

>A lot of discussion on Marine Radio isn't about ham radio at all.

It is when that operation fosters illegal operations that migrate to
Amatuer allocations.

>A heap of abuse piled on CB might be justified
>because the FCC stole the wholly-owned and operated
>11 meter band from US radio amateurs 42 years ago.

If you think that's the reason any of us are adamantly against the
proliferation of CB type operations on unauthorized frequencies, you are a
bigger idiot than I thought, and Lennie, I already know that you're a pretty
big idiot.

>Oxendine has posted to all of those threads...and a couple of
>others which have nothing directly to do with amateur radio.

Pot/Kettle/Black. What's your point. You have pontificated long and wide
on topics having NOTHING to do with Amatuer Radio, yet you freely castigate
others for doing it.

Putz.

>...now why must there continue to be a morse code test for
>amateur radio licences other than ITU-R S25.5?

YOU are the ONLY one arguing this, Lennie. The rest of us have tried to
move on, but you keep INSISTING that "EVERYONE" is trying to somehow retard the
growth of Amatuer Radio by insisting on keeping code testing.

Like it or not, just about everyone here EXCEPT YOU has accepted the fact
that the FCC will dispense with code testing after the treaty has been ammended
and ratified.

>Forgive me, morse code testing may not be about amateur
>radio? Inform the civilians who know nothing about nothing
>because they aren't licensed in the amateur radio service.

We forgive you for being ignorant, Lennie.

We forgive you for being arrogant.

We even forgive you for being intolerant.

But the "Persistantly Nagging" thing is really getting to be a problem.

Again, whether any one of us particularly like or dislike the end of code testing, we are getting on with the business of BEING Amateur Radio operators. That gives us a LOT of room to navigate in, from the basement of the RF spectrum to daylight.

On the other hand, since you refuse to get a license, you are stuck with Part 15 devices, CB radios and TV remotes.

(And don't even THINK of getting into that "I have unlimited access since I have a "commercial license" rant. You have NOTHING without a STATION license...it says so right on the back of your GROL)

Once again, Lennie the Licenseless is relagated to being on the outside looking in...doomed to be the sopping wet kid with his pitiful nose pushed up against the bakery shop window.

Lennie is the Darth Vader of RF. We all know that inside is a nice guy who WANTS to be a part of the party, but he has been too long swayed by the Dark Side...It won't be until his demise that he finally realizes that it COULD have all been his.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

>engineer?

Cecil:

Admittedly, nothing was gained, but nothing was lost, either -- except
perhaps from his personal point-of-view. However, this loss was self-
imposed, due to his unwillingness to meet the licensing standards in
place at the time. It has been proven that people from all walks of life --
including Ph.D's in Electrical Engineering with commercial radio
licenses and an armload of professional credentials in the field of
electronic communications, can master the Morse Code at a useful
proficiency level. So can people who are mere radio hobbyists, who
don't have anything even scratching the surface of professional
electronics knowledge. If you don't mind my akxsing (just a little
Ebonic lingo thrown in to demonstrate my multi-cultural sensitivity)
an often repeated question -- what is your point?

The really sad part, Dick, is that I believe that you see it that way.

I hate to be the one to break it to you, Dick, but the FCC has made its decisions wrt code testing and volunteer examining and question pools quite some time ago. There is nothing to capitulate.

I guess I feel that unity is more important to ham radio than is your personal need to vent your anger about the FCC's decision on those who have done no more wrong than to do what the law requires to get a license. To me, the unity of ham radio is a more important tradition than nearly any other. It is too bad that some are choosing to trample our fine traditions.

>>Unlike other bidding
>>processes, things being sold at auction go to the highest bidder rather
>>than to the lowest bidder.

>What other auctions sell to the "lowest bidder?!?

Let's read that sentence reeeeeeeal slooooooow for Lennie.

"U n l i k e o t h e r b i d d i n g p r o c e s s e
s"......(SNIP)

Bidding processes...IE seeking bids to perform a task for hire or provide
goods to a governmental or commercial entity,

"....t h i n g s b e i n g s o l d a t a u c t i o n g o t o
t h e h i g h e s t b i d d e r r a t h e r t h a n t o t h e
l o w e s t b i d d e r."

In an auction where one seeks to PROCURE services or materials, they seek
a competitive price by inducing the prospective vendors to provide the LOWEST
price.

In an auction where someone seeks to sell or lease something of VALUE,
they seek the HIGHEST possible price by competitive bidding of the CUSTOMERS.

Where in that thought process do you get lost, Lennie? Fourteen years of
school melt your brain?

>What particular amateur radio bands are now under consideration,
>or even hinted at being under consideration for reallocation?

Just about everything above 144mHz. We can start with "BLUETOOTH" and
rattle on a litany of other commercial world programs that covet our spectrum.
1.2gHz, 2.4gHz and 5gHz are under very close scrutiny for this act.

Or which one of two dozen trade periodicals would you care to dispute on
this, Lennie?

"TV Technology"...? "Electronic Design"...? "EE Times"...?

I don't need a degree in engineering to understand "....we are seeking
access to (enter band of choice here) to further expand the capabilities and
improve the flexiblity of (enter pet project here).

>Let the world know so that the black helicopters may be properly fueled.

You ARE an idiot. Flaming, rip-roaring, stupid-as-the-day-is-long idiot.

>>understanding of the present situation in the ARS.

>In your opinion anyway.

Let's put it to the test. Larry, what it the complete and insightful present situation in the ARS wrt the following topics:

Ultrawideband
Spread spectrum
Digital voice
Home Phone Networking
Synthetic aperture radar
Periodic emitters

Just to pick a few that I know well enough to be able to judge your response.

IMHO, anyone who thinks he has a complete and insightful understanding of all of the issues surrounding Amateur Radio is egomaniacal beyond belief. I realize you think you are superior, Larry, but you really should draw the line somewhere.

>Bounties and rewards sounds like a vigilante operation to me.

The FBI's "Ten Most Wanted" list is a vigilante operation?

The reward offered in the wake of the OKC bombing was a vigilante operation?

Of course, since I have my suspicions about you anyway, I BET that "bounties" make you nervous, Lennie, and probably with good reason.

>The word "amateur" in amateur radio refers to non-pecuniary
>interest in radio activities.

That pertains to compensation received for OPERATING a radio station for hire. Not that you needed to have that told to you. And ANYONE can participate in "radio activites" FOR PECUNIARY INTEREST with or without a license, as long as it does not involve operating a transmitter or divulging information contrary to The Communications Act of 1934 as ammended.

>What happens when the wrong person is accused due to bad
>evidence?

"Rewards" are paid "for the arrest AND CONVICTION OF" the alleged culprit. In otehr words AFTER the bonafide judicial system has determined that the person(s) alleged to ahve commited the offense did indeed do it.

Lot's of people are, unfortunately, prosecuted "due to bad evidence", and HOPEFULLY the "system" will see through it and "justice be done".

Do the wrong people get convicted? Sure, sometimes. But statistically that number is VERY small.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

NCI (which by the way is a registered trademark of the National Cancer
Institute) is opposed to the allocations of the CW sub-bands on all HF
frequencies..as stated many times by Direktor Stevenson. This equates to
opposition to code. Waffle all you want, but eliminate these protected
areas and you eliminate code and digital modes as the SSB hordes will
descend upon them faster than Gengis did on China

One lone voice in a screaming crowd of 1000's is seldom heard - Confucis

CW gets through when Condx are less than favorable. Today's modern DX'er (read post realignment) feels the need for stacked bleams and mega watts of amplitudinal power to make themselves be heard on SSB. Couple that with their total lack of operating skills, I doubt even an avowed QRP'er like yourself would ever make a contact in some of today's mega pile-ups.

Here's a test Ed. When the next big dx-pedition is on the air. Try working your qrp signal against the SSB boys. Betcha a nice lobster dinner at Ruths Crist you never make it through. Betcha 2 dinners, you're never even heard :-o

He was not unwilling, Larry, he was unable. He spent thousands of hours
practicing Morse code and could never get past 10wpm. Getting to 13wpm
was his top priority and had a negative effect on his life and physical
health. What is it about a biological handicap that you absolutely
refuse to understand?

This "protection" exists in the regulations of only a small number of countries worldwide. The vast majority the ITU signatory countries do not divide the amateur bands up be mode, yet we do not see "hordes" of Canadian or Japanese or Chinese SSB signals descending on the CW end of any band.

Even in the US, 160 meters has no such "protection", yet SSB, CW, and even AM stations seem to coexist just fine on that band.

Waffle all you want, but the evidence disproves your "the sky will fall on CW" jeremiad.

>Why Larry, why can't you be the source of that "first-hand
>knowledge" which you can then share with them to
>convince them to leave the test alone?

Bill:

This is a legitimate question, and I'm going to give it the truthful answer it deserves. I cannot personally impart "first-hand knowledge" of the value of the Morse/CW mode upon prospective hams -- they must gain this knowledge on their own. I can always make the attempt to relate my experiences, but that, from their point of view, is merely anecdotal evidence of facts they have yet to determine for themselves to be true. In the absence of the requirement to be tested for CW proficiency at a useful level which would encourage continued on-the-air use of the mode, the problem becomes one of motivating an individual to gain this skill.

With the incentive of higher operating privileges already given away for free, there no longer exists any reason for becoming a proficient CW operator. The mere words of CW esthusiasts like myself may not necessarily inspire people who are motivated by amateur radio activities which provide more readily attainable gratification. I can always try, of course, but to be perfectly honest, I am not really interested in "recruiting" CW operators. I would prefer to see them come about through a process which I feel develops internal motivation to learn and gain proficiency in the mode. I believe in incentives -- they work virtually every time they're tried. I believe in the testing requirement -- it worked for me and for millions of hams before me.

>In your opinion anyway.

Precisely. Everything I state in this newsgroup is MY opinion.
I also know for an absolute fact that MY opinions are shared with
a great number of my fellow hams, in and out of this newsgroup.
I am not put off by the fact that there are people out there who
disagree with me. At least, not as much as you and a lot of the
no-code test supporters seem to be. Why is that?

Ed:

OK, I'll bite -- what is a "spun" bearing? I've always scored high on mechanical aptitude, but I've never heard that terminology before. 'Splain, Lucy!

It's called the "gentleman's agreement" No one has to follow it, but
they do out of courtesy to each other, however, less and less. More and
more you hear the New Hams, who should have listened listened listened
first, just fire up and yak away and then complain out some clicking
noises they hear. If chastised, they get indignant.

>

However, the original premise was that NCI is actively seeking to
eliminate CW by virtue of Carl Stevenson's comments and teachings to the
other sheep...members.

Sucks to be me I guess

NCI has taken NO stance on sub-bands.
The personal opinion of one NCI director does NOT make
it NCI policy. There are many people that oppose subbands who
care not a twit about use of any one mode.

Ed:

So, you're saying that the ARRL should fight tooth and nail to preserve, support, and defend the remaining 5 WPM Morse code testing requirement for a General- or Extra-class license? Wow -- you're really sticking your neck out on that one, aren't you? After reducing the code testing requirement down to the level of absolute meaninglessness, you begrudgingly allow that it now should be retained ad infinitum. How magnanimous. A code test that a person can pass without knowing the Morse code at a useful proficiency level is the one which should be kept forever. Well, I happen to disagree. It is now time to show the world exactly what the ARRL, the equipment manufacturers, and the amateur radio publishing houses really think of the ARS' most uniquely practical, effective, efficient, and universal mode. Which is nothing at all. Nothing except a potential barrier to their economic success, that is.

I say eliminate code testing in its entirety. I also say reallocate huge chunks of our valuable spectrum above 500 MHz to more productive and profitable commercial broadcasting and communications services. One hand washes the other.

For a man who put some much credence into the opinions of others as it
related to their affiliations, why is he allowed the privilege of stating
his opinion apart from the organization. Sorry Bill, he set the rules a
year or so ago, especially when it came to Ed and the ARRL. He sets
them, he plays by them. Can;t separate the 2 just because it suddenly
seems advantageous to you and your organizations stated goals.

Seems to me, being on the bands that they honor the sub bands, however
less and less. Maybve you should actually spend time on the HF bands.

It does? So you advocate bringing back the 13/20wpm code tests so
hams will use code above 500 MHz in order to save UHF spectrum?
I, personally, fail to see the relationship between code testing
and ham spectrum above 500 MHz.

> Periodic emitters

Personally, Ed, I'm totally in favor of the entire lot. I have absolutely nothing but the
greatest of enthusiasm for whatever technological wonders the ARS can bring to me. I have always embraced cutting-edge technology as a radio amateur; I can't get enough of the digital modes, mainly due to the fact that not enough of my fellow hams
in this area could be bothered with anything more intellectually taxing than picking
up a microphone. I've seriously thought of moving to Wilmington just to be within range of Baltimore's ATV repeater system. The difference between me and the NCTA is that I realize that Morse code proficiency and technological advances can coexist, whereas they insist that the two must be mutually exclusive. You tell me
--
what's up with THAT?

In reality, Ed, I am not anything close to the egomaniac you think I am. I am very

well grounded in reality, and I have no illusions about myself as a person or as a radio amateur. I'm just a normal, ordinarily talented individual. Yes, I will admit

to higher than normal intelligence, but I seem to lack common sense. If I had any, I probably wouldn't waste valuable time in this newsgroup.

> refuse to understand?

Cecil:

One thousand hours is 41.666 days. I went from nothing to 20 WPM in
probably 100 hours or less of sending/receiving practice, including scores
of
on-the-air QSO's. I seriously doubt that your friend invested anything
close
to 1,000 hours of code practice. Is there anyone out here that can believe
Cecil's claim?

BTW, I am completely empathetic wrt your friend's "biological handicap,"
if one actually exists. However, I don't subscribe to the notion that
having
an amateur radio license of any particular privilege level is any kind of
"right."
There will be certain people who, no matter what happens, can not be
included among the rolls of radio amateurs. Life is like that. I wasn't
able
to make a career as an Airline Captain because of my eyesight. Do you
think an affirmative action program should have been in place to prevent
me from being "excluded" due to my "handicap?" Remember, with my
eyeglasses, I have BETTER than 20-20 vision. Airline pilots whose vision
deteriorates with age and require corrective lenses are allowed to use them
without being denied their pilot's licenses. So why wasn't I even
considered
for this type of work just because I would have been wearing corrective
lenses from the start? Nevertheless, I accepted the requirements in place
for
both a commercial pilot's license and the Amateur Radio Service. Your
friend proved he was able to live without HF amateur radio privileges just
as well as I was able to live without a career as an aviator. Your argument

has made absolutely zero points here.

Jerry:

You raise some good points about allowing local governments to enforce rules against illegal CB equipment. Perhaps the best way for local governments to proceed is to enlist the help of hams in the area who can work as a volunteer advisory committee to point out offenders. Just as local jurisdictions have competent engineering help in other technical areas, they can hire commercial engineering firms to help prosecute offenders they have identified.

Then what I would *really* like to see are sting operations at CB stores that sell illegal equipment, as well as "sweeps" at big truck stops along the major interstates!

>"hordes" of Canadian or Japanese or Chinese SSB
>signals descending on the CW end of any band.

This is primarily due to two facts:

(1) With the exception of Japan, we pretty much have the corner on
Amatuer Radio operators. Ergo they can afford to let the few Amateurs in thier
various administrations be "self-policing" in regards to sub bands.

(2) The Japanese society is very disciplined. If you tell them to NOT
operate in certain parts of the spectrum they won't do it. No problem.

>Even in the US, 160 meters has no such "protection", yet
>SSB, CW, and even AM stations seem to coexist just fine
>on that band.

And the relative number of Amatuers operating on 160 meters is....?!?!?
Also, the same "lure" of easy DX does NOT exist on 160 meters like it does on
the HF bands. If Lower Slobovia starts calling "CQ" at 14.030 SSB, you can bet
that the kilowatts will be lined up from 14.000 up.......

>Waffle all you want, but the evidence disproves your "the sky will fall on CW"
jeremiad.

Will the "sky fall"...?!?! No...Will CW as an art disappear...? With the
exception of a few diehards, yep.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Nope. But its easy to see that you are of the "gimme my privileges,
forget the responsibilities" school.

There's a huge trash underway at very high levels in the BSA heirarchy
over this bullshit. Individual troops have cut their ties with the
organization and continuing on their own. There are rumblings at the
council levels about pulling out of the national organization.
>
The problem is not morality or depravity or righteousness, the problem
is that there is no excuse or rationale for the Boy Scouts to get
involved in matters involving sex one way or another. National is a
bunch of Bible-pounding old farts in Dallas who have done a loverly
job of screwing up the whole movement by injecting issues into
scouting which have nothing to do with scouting. .

I work with a guy who was a South Vietnamese fighter pilot in that war.
Even among those guys, Chuck Yeager is a hero. Since Gen. Yeager says there
are no old, bold pilots, I guess I'll take his word for it.

Read more carefully. Contracts are awarded in a bidding process. Most
contracts are awarded to the lowest bidder. You started this, Leon. Live
with it.

He never needed to copy Morse code at more than 5wpm in order to use HF.
Why would you claim he was "kept off of HF"? Or was that just another
exaggeration.

I already know "the rest of the story."

> His experience changed my mind about Morse code testing.

Seem it takes a lot more than one guy to change your mind about anything,
Cecil. I'm not convinced. But I formed my opinion about code testing in a
similar way. I knew guys who had been hams for 20 years, and didn't have
the privileges I did as a new guy - just because I could do the code and
they couldn't. I didn't think that was right.

You are full of misinterpretations, Ed. Never have I said that hams must be technical geniuses, like Cecil claims to be. But neither do I agree with Cecil and you that hams need not know anything serious about radio technology.
You guys seem insistant that hams learn 9only newer mode technology, while your cavilier attitudes toward anything older than yesterday is amazing. Most ham radio communication is done with old technology, and so shall it be for some time to come. Sure, hams have long been able to get by somehow or other on little no knowledge, not that they have always been that productive at it. When one doesn't know how to make an antenna nor troubleshoot a defective one effectively he is sort of hamstrung when trouble strikes. But they press on, oblivious to their own plight. Why not see to it that they get some effective training in advance? How to better accomplish that than to have effective tests, rather than testing them over sattelite operation and other mundanities they more than likely won't soon see?

My computer shows that the post which suggested digging and filling an 8
cubic yard hole 20 times was posted by W6RCecilA. Are you claiming this
information incorrect? If not, then it was your idea, and I claim you are
therefore responsible for beta testing it. :-)

Careful Ed, your True Colors are beginning to shine.
CW can overcome much QRM but no one wants to have to tolerate that sort
of crap continuously, few will do it. A mode war would soon ensue and I
imagine FCC realizes that. Perhaps that was a reason no change was made
to band segments. We hope they are at least that aware up there.

Many ancient "skills-cum-arts" have disappeared, except among a core of devotee's.

..muzzle loaded muskets
..farriers
..archers
..steam threshers
..hand-cranked automobiles
..sail driven cargo ships
..the village smithy
..home-made soap and candles
..etc., etc., etc.

At one time these skills were all important parts of mainstream society, but now are quaint arts practiced by "diehards" (your term). So also it is with those of us who practice the art of radiotelegraphy.

So be it.

Quoting from the 1957 ARRL License Manual: "The privileges available
to the Technician are all those amateur privileges in 50-54 and above
220 Mc., ..." His Novice license had expired after a year and the only
way for him to continue as a ham was a Technician license with *zero* HF
privileges. Yes Jim, as a 1958 Technician, he ***indeed*** was "kept
off of HF".

> Seem it takes a lot more than one guy to change your mind about anything,
> Cecil.

Nope, all it takes is one person, Jim. Can you imagine a murderer's plea,
"But, I only killed one person and I deserve mercy because of all the people
I didn't kill."

To All Cybercitizens,

The official launching date for our global broadcast: 1 November, 2000 is supposed to be a celebration marking the completion of Global Media Network. But as you're well aware, the reported break and enter, theft and other crimes committed by the Vancouver police which, if unchecked, have the potential to destroy human civilization. We offer our service as an impartial, fair, unbiased media. Our media network possess the power to illuminate the far corners of the globe, not for higher profits, but for higher understanding between the people of this great planet. We are proud that our media network, as its name implies, has the ability to reach every corner of the earth. We offer our declaration of principles to the men and the women, to our every brothers and sisters in the planet whom we humbly serve. We promise to report the news without fear or favor, to be a force for good in this world, fighting injustice, crushing intolerance, battling inhumanity, striking a blow for freedom at every turn. These are the goals of Global Media Network. Join us and visit our official web site at http://globalmedianetwork.org

Global Media Network proudly presents REVIEW OF ONE OF THE TOP NEWS OF THIS MILLENNIUM:- BURGLAR WATCH-A STATE OF WIDESPREAD STINK, OPPORTUNISTIC & RAMPANT THIEVERY, PLAQUE, CHAOS, BARBARISM AND LAWLESS-A GLOBAL REPORT OF BREAK & ENTER, THEFT, TREPASS, FRAUD, FABRICATION AND COLLUSION CONSPIRED BY VANCOUVER POLICE

ENACTMENT OF THE INCIDENTS [DETAILS PROVIDED BY THE VICTIM]:

On 6 June, 94. the victim went out at 2:30 p.m. from his apartment. When he gone back at 2:37 p.m. he discovered that both his apartment and his bedroom were broken and entered. He discovered that his newly bought hi-fi components (bought at A & B Sound) and forty CDs (costed CAD$2,000) were stolen from his bedroom. When he reported the crimes to the police woman badge # 9082, who admitted the fact of surveillance two years afterwards in 1996, she behaved very arrogant. She purposely hanged up the phone several times in order to aggravate him.

Being alerted of constant harassment, out of suspicion, in 21 September, 96, at 6:00 p.m., the victim confirmed with the same police woman badge # 9082 via 911 that the Vancouver police had

placed the audio and video surveillance devices inside his apartment. She refused to remove them and asked him to remove them. The Vancouver police were very familiar with the environment inside the apartment. In other words, the Vancouver police specificially targeted at the victim's properties that were located at his bedroom and knew exactly when the residents inside left the apartment. When the residents left the apartment on 6 June 1994, at 2:30 p.m., the Vancouver police sneaked into his apartment, stolen his properties and left within a minutes.

In July, 96, he called the Vancouver police in 320 Main Street, Vancouver, a male police who had sneaky remarks (about twenty something years old, caucasian) lied that the former chief constable Ray Canuel was in Atlanta, Georgia so that he could not handle the complaint. Afterwards, he sent a letter to Ray Canuel (deceased of cancer) in the same month without hearing any response. He then presented the complaint in person directly to the assistant to Ray Canuel. The assistant deceived him that the Vancouver police wouldl respond to his complaint three weeks later. The complaint aroused the police's revenge. Two polices without search and arrest warrant trespassed his apartment in Feb., 97. One caucasian police opened his complaint letter which was originally sealed without his consent and he was falsely arrested by the two polices. One of the police were a Chinese who were about 5"6, 160 lb., black and short hair. Another police were a caucasian who were about 6"2, gray and long hair whir covered his trim, gray-blue eyes, about 220 lb.. Both polices were thirty something years old. The latter one misrepresented and called himself as former Chief Constable Ray Canuel (deceased). The two polices committed trespass and false arrest.

The fact that Vancouver police are morally corruptive makes no difference to his efforts. When the victim filed the complaint through other formal channels three years afterward, i.e. 1999, he received a fabricated letter from Sergeant Mike Bernard, Office of the Chief Constable, Internal Investigation Section, Vancouver Police Department dated 20 May, 99, falsifyinging that police badge #581 Dave Turpin, Tony Zanatta had conducted the investigations. Indeed, they never contacted him nor take any report.

On the other hand, given the Vancouver police are coercive that they collude with every party the victim seeks help from or affiliates with. When the victim booked an appointment with a security company, APC Security in Burnaby, B.C., to do a further sweep on his apartment, the Vancouver police colluded with the company not to show up at the appointment on 26 July, 99. The same circumstances happened for Brian Brown & Associates INC, owner: Brian; operator: Laurie. Ph. (604) 2912121 and Interglobe Investigation Services Inc.. On 6 Aug., 99, the Vancouver police called the property manager of Crosby Property Management Ltd. to

follow him when he walked to the garden. The property manager purposely aggravated him and tried to fight with him. The property manager asked him to complain to the management (instead of the police complaint authorities) so that they can cover up the conspiracies....

Please join our global action together with ALL media and ALL political leaders ALL over the world that have received our attention.

>This is a legitimate question, and I'm going to give it the truthful
>answer it deserves. I cannot personally impart "first-hand
>knowledge" of the value of the Morse/CW mode upon prospective
>hams -- they must gain this knowledge on their own.

The people YOU need to impart such knowledge to
are not prospective or current hams, but rather those
subject matter experts on radio regulations that the
various country administrations will send to WRC-2003.

As a front-end to that you can try to convince those "inside"
amateur radio as to your beliefs by having the IARU
support your position...since the IARU is often looked
at for guidance on such issues by the WRC representatives
from each country.

As a front-end to that you can try to convince those "inside"
amateur radio for each country as to your beliefs by having
that country's national organization (e.g. ARRL for the
USA, etc.) support your position...since each respective national
organization is often la party to the IARU decision process for the
individual region it is in (e.g. Regions 1, 2 and 3).

> I can always
>make the attempt to relate my experiences, but that, from their
>point of view, is merely anecdotal evidence of facts they have
>yet to determine for themselves to be true.

Glad you understand that. The policy makers address
such issues based on facts, not isolated anecdotal
evidence. Now if such anecdotal evidence is of sufficient
quantity, hen it can be viewed as significant, but without
such quantity, the isolated incident here and there won't
do it.

>In the absence of the
>requirement to be tested for CW proficiency at a useful level which
>would encourage continued on-the-air use of the mode, the
>problem becomes one of motivating an individual to gain this
>skill.

I have absolute faith that any argument based on
"motivational factors" will not be given any merit by
the WRC policy makers anymore than it has with the FCC.

>With the incentive of higher operating privileges already given
>away for free, there no longer exists any reason for becoming
>a proficient CW operator.

You are into circular argument again. The first priority
for you is to CONVINCE the policy makers that there
MUST be a pool of "proficient CW operators." You
haven't done that.

>The mere words of CW esthusiasts like
>myself may not necessarily inspire people who are motivated by
>amateur radio activities which provide more readily attainable
>gratification.

Not everyone can be inspired to play golf, to learn CPR,
to do (insert any activity you want). The fact remains,
however, that if something has some enjoyment/interest
for even a small minority of people it will keep
a following of loyal users. The burden, however, is on those
loyal users to "recruit" new loyal users. That is no
different for people that "recruit" others to play golf,
to buy, restore and enjoy antique cars, and YES,
learn and use CW.

> I can always try, of course, but to be perfectly
>honest, I am not really interested in "recruiting" CW operators.

Belive it or not, I wrote my prior comments with
the "recriting" wording before actually reading this
one. The sad commentary of your statement is that
you really don't care enough (IMHO) about CW
to be a champion of the mode you want every ham to
be proficient at. That's a major hypocracy in my book.

>I would prefer to see them come about through a process which
>I feel develops internal motivation to learn and gain proficiency
>in the mode. I believe in incentives -- they work virtually every

>time they're tried. I believe in the testing requirement -- it worked
>for me and for millions of hams before me.

We obviously disagree, because I only believe in incentives
based on requirements which are related to those incentives.
One example that I personally would endorse is lower power
for the entry license. I believe higher power should then
be tied to the requisite knowledge in the higher license
test syllabus that can show the safe, sane and proper use
of higher power. NOTE: This is BILL SOHL's personal opinion
and NOT an NCI position.

>>>> > Unfortunately, new hams coming into the service after

But, clearly not enough to influence the FCC with sufficient
facts and/or anecdotal examples to sustain the continued morse
requirements of 13 and 20 wpm today...and, likly the end of
any separate stand-alone testing of morse after WRC 2003 (IMHO).

>I am not put off by the fact that there are people out there who
>disagree with me. At least, not as much as you and a lot of the

Larry,
I have no problem with disagreements and other opinions
which are discussed, debated, shared in a light of
the pure academic exercise of such debate and/or to influence
others. The problem I see, and to which you and others
oft go to, is the attempt to portray others that disagree
with the pro-code position as being "lazy, shiftless, etc.
The reality is that thousands of us that have taken the stance
in opposition to code testing have long histories of being
highly motivated, successful, and anything BUT lazy, shiftless, etc.

Cheers and thanks for at least a reasonable response.
We obviously disagree, so be it.

When one of the connecting rod bearing halves gets loose enough to
slip and "spin" out of position. It is usually a combination of worn
bearings and worn crankshaft journal. It happened to a SIMCA
I once owned.

All that proves is that *you* are capable of learning Morse code. Are you capable of dunking a basketball? Some people find it just as hard to become skillful at Morse code as you find it hard to become skillful at dunking a basketball. Again, Larry, your attitude is let them eat cake. Well, the FCC gave you exactly what your Royal Highnee deserved.

> I wasn't able
> to make a career as an Airline Captain because of my eyesight.

Did the feds keep you out of any National Parks because of your poor eyesight? If not, your analogy is invalid. Being an Airline Captain is a commercial life and death situation. The national resource of Amateur Radio, open to all qualifying citizens, certainly is not.

The reality is that may have been the case in the past and
it has been generally accepted now by everyone (well most
everyone) that we each have individual opinions that can
and do differ from the organization's policy (be it ARRL, NCI
or any other). Your reliance on a two year old stance on such
attitudes is flat out wrong, and it is not "suddenly advantageous"
to state what I did because this has been so for quite some time now.

I believe you CAN sue the police for not protecting you if you can establish negligence...they knew there was a threat, but did not act. Similar types of suits are used regularly by environmentalists against various government agencies for not enforcing their rules. Examples include suits to place various animals and plants on the endangered species list.

The issue is the "requirements" not the learning of
old or new modes. I don't care if anyone wants to
be an expert code user, be an expert on tube circuits, etc.

>Most ham radio communication is done with old technology, and
>so shall it be for some time to come.

Depends on the scope of what you consider technology.
Is SSB and FM old as to the mode itself? Sure it is.
Is the transciever that I use to operate SSB or FM old
in terms of the solid state technology, the DSP
circuitry, etc? Not at all.

>Sure, hams have long been able to
>get by somehow or other on little no knowledge, not that they have
>always been that productive at it. When one doesn't know how to make an
>antenna nor troubleshoot a defective one effectively he is sort of
>hamstrung when trouble strikes.

Most antenna technology is VERY old when compared
with the rest of electronics.

>But they press on, oblivious to their
>own plight. Why not see to it that they get some effective training in
>advance? How to better accomplish that than to have effective tests,
>rather than testing them over sattelite operation and other mundanities
>they more than likely won't soon see?

Of the following, what should be part of testing:
Antenna theory/design
Tube theory and tube circuits
Transistor Circuits

I agree that some of the subject matter in the
testing syllabus is truly nutty. Who cares how many
months before/after one operates a space station that the
FCC has to be notified. Who cares what the frequency
is for black in ATV, etc. Many of those factoids are
meaningless until a person has the interest in and
actually starts using/trying some of those modes.

Cheers,
Bill K2UNK

Right on target. The courts will not substitute their judgment for
the FCC's judgment of enforcement priorities. And the FCC has
the ultimate reply anyhow - lack of $$$ from The Congress.

My erstwhile clients (the sheriff departments of three Bay Area
counties) want no part of dealing with the CB problem even though
they have excellent in-house and on-call engineering and enforcement
assistance available. They look at it as one more pack of "mickey
mouse" (i.e. not "real public safety") rules that they would get
stuck with enforcing with no increase in staff or budget.

>Then what I would *really* like to see are sting operations at CB stores
>that sell illegal equipment, as well as "sweeps" at big truck stops along

The enabling legislation does not give the locals any authority to
enforce marketing regulations, only operational regs.

That's cheap. The firm that I consult for/with charges a lot more
than that, and has five of the nine Bay Area counties as long-time
clients because they do the job *right*.

Dear Congressman Snarf,

The CBers are transmitting on 10M. Please have the FCC make
them stop.

Love Always,
Joe Ham

Dear FCC,

Enclosed is a letter from my constituent, Joe Ham, a fine
upstanding citizen. Please advise this office of your
action on this important matter.

Love Always,
Joe Bureaucrat
(Assistant to Honorable Congressman Snarf)

Honorable Congressman Snarf,

Thank you for forwarding the letter from your constituent
Joe Ham.

As you are aware from the recent budget hearings, the FCC
will need a significant increase in funding to fully deal
with this and hundreds of similar matters in a timely
fashion. Until then, we will devote resources on an "as
available" basis.

Love Always,
FCC

Dear Joe Ham,

The FCC is looking into it.

Love Always,
Congressman Snarf

I'm absolutely sure you're the one who suggested a new kind of ham
license that required an unprecidented amount of work. I'm equally sure
that it wasn't Dick's idea.

W6RCecilA wrote: "Maybe we should have a special ham license for guys

But, but, you said you wanted to keep the code test, and score it in with the written test. Why would you say you want to keep a test that you also say has no rational need to be? That's quite a dichotomy you're dealing with there.

For your clarification, then...
I oppose the code test as a separate pass/fail exam.
I have no problem with adding a couple of questions to
the theory syllabus relating to code as a mode. That would
put the code on an equal footing (as a mode) with all
others.

Cheers,
Bill K2UNK

That doesn't sound like the same thing as scoring the code test in with
the written test. Have you backed away from that now?

If you are talking about integrating the 10 questions
of a morse test with the other written tests, you are
correct in that I see no reason to support that any more.
It was a hypothetical that showed how locked in the
code requirement mindset was. The reality is that
it never was going to happen. Had it actually gone forward,
I'd have supported it for the interim. Now there is
absolutely no need to do so. Times change, positions
change.

When having nothing rational to say, you resort to sillyness? He was more
intelligent than I. He was better educated than I. He was more experienced
than I. He was more knowledgeable than I. The single advantage I had over
him was that I was biologically capable of 13wpm and he wasn't. It was/is
a biological condition beyond his control just like skin color or sex.
Walk a mile in his shoes and then get back to us.

Jeez, that seemed painful for you.

My recollection is that you did more than just support the idea, though. Weren't you the one who actually proposed it?

Wrong.

Adolescents must be protected from those who would exploit their
interest in sexuality. I have no problem with the idea of homosexual
males being on GIRL Scout overnights, I have a real problem with
heterosexual males being there.

If you don't see the risk of having homosexuals leading troops on
campouts, then you are broken.

Of course, you would have to come out of the closet to pay up, so I am not sure this is a valid bet. :-)

Tell you what; lets wait until the next DX phone test and I will set up a sked with a QRPer 500 miles away right on top of a Canadian running 'em. I am sure we can make the QSO.

If you tell me who you are, I will take you up on your bet.

Folks

I have a "tech-plus" (technician plus 5wpm code) license that I received in 1991 that is up for renewal in July. With the new fcc rules, what class would that be renewed to and/or would any additonal testing be needed? Thanks.

It would renew as a "Technician" license with 5WPM, thus eligible
for the same priveleges you have now. ("Novice" HF privs plus
everything above 30MHz)

With one additional written exam you could upgrade to General.

With still another written exam you could upgrade to Extra.

73, Hans, K0HB

Please. They both realized that they had set standards that they were
being judged by. After trying to weasel out of holding themselves to the
same standard they set, the NCI board MADE them concede. This way they
could go about bad mouthing everything around them that didn't agree to
follow the rest of the group. Archives show that Carl hated everything
about the ARS, especially the ARRL.

BTW..after all his posturing about the elimination of the code..or the
reduction and all the great things he could do but couldn't/wouldn't, it
strikes me as funny that he never used his get of jail free card and bag
that Extra license. HHHmmmmm

What kind of nonsense is all that?? Of course I don't build my own vacuum tubes nor caps and resistors, but I have a lifetime supply, probably 6K tubes, along with a lot of transistors and IC's and scads of other hard to find parts. So what? Do you build your own pickup trucks? Why are you trying to gete stupid on us?
If you believe that ham radio and CB are one and the same,why not just come right out and say so instead of all this dancing around the subject?

Maybe Bruce was right-- "No CW, it's just CB". Why don't you just overtly acknowledge it instead of trying so hard to ease us into the idea?

MOrse didn't invent the code that bears his name, either, ALfred Vail
did. Morse was klutzing aroiund with using numbers for words, and was
really upset when he saw what Vail had done to so seriously upstage him.

>

Makes a good story. May even have a grain of truth in it. If so, power
to him, at least he had what it took to get radio off the ground. Others
who came before didn't get it done.

Mahybe YOU don't. That doesn't mean others are of the same mind,
whatever they say for publication.

Some
> of us simply want radiotelegraphy to stand on its own merits and not
> be artificially propped up by a governmental affirmative action program.

Which is tantamount to it's demise. When no one is required to learn
it, it is gone,gone,gone in less than a generation.

Why do I really believe that is a huge mistake? From another venue:

"A book with the simple title "Complexity" says that all self-adaptive
systems (including us) grow in complexity until we reach the edge of
chaos, where being competent is defeated by random events beyond our
ability to predict or control."

I have seen too many failures of high technology to believe that it is
the total answer to all human needs. It only gets worse with added
complexity. When will the lockup occur? Do YOU know?

> situation in the ARS wrt the following topics:

I'd like a shot at these:

>
> Ultrawideband

Unless you're referring to SS we don't have any wideband, by
regulation.

> Spread spectrum

Useful in many venues. I have a cordless telephone which works great.
As for ham radio, it is clear where we are with it - nowhere. We can't
begin to agree on what the consequences of use of SS are on HF, and
it'll be years before that question is adequately addressed.

> Digital voice

Same as above. In ham radio we don't have any, and it doesn't appear
likely we will in the foreeable future. What would be the point?
Ham radio responds to two stimula:
1). developements which solve a need, such as development of SSB which
did indeed solve the horrendous band congestion of the late years of the
AM days. Anyone who experienced the wall-to-wall heterodynes of 75 and
20 meters in the 50's-60's knows.

2.) New developments which are attractive from an operational point of
view, including efficient use of bandspace and power. PACGTOR and PSK31
are two notables. I know that engineers and theorists see great things
for digital voice. I have serious reservations that the ham radio
populace will agree that the massive convesions needed will be in their
best interests given that there is presently no imperitive need. I know
that time and proofs of some of the finer benefits will slowly persuade
hams that there may be reasons to go digital voice, but I believe that
will take longer than the conversion from AM to SSB. The glarin gneed is
just not there.

> Home Phone Networking

QRM, QRM, QRM. Sanctioned by our very own FCC. I yelled as loud about
that when it was in the NPRM stage as anything I've ever yelled about,
both to FCCand my congressman. I imagtine many others did, too. To no
avail, as is clear.

> Synthetic aperture radar

Not familar with this one.

> Periodic emitters

More "help" from Friendly Cousin Charlie. Live with it, I guess.

>
> Just to pick a few that I know well enough to be able to judge your response.
>
> IMHO, anyone who thinks he has a complete and insightful understanding of all

> somewhere.

A long-experienced Extra class ham is not a superior performer to the
many beginners in ham radio? What is this, becoming a Communist
hobby/League? No body said "better" or "exclusive". Despite all your
verbiage in criticism, the newcomers know...

Hey, we're paying you to be the expert, Ed, and to handle such stuff
for us. If no new hams need to be even minimally technically competent
what's your problem?
I know of no better reason to pay my membership dues than to hire you
and others to keep ham radio afloat, If you guys can't get it done,
well, either we'll have to find someone better at it or give it up.

And again, you have done very well at holding down your end of things.
I still think that Newington could have done a lot better job of liason
with the FCC in the past couple decades. They need to know us on a first
name basis, and that first name should not be Squiggy.

> signals descending on the CW end of any band.

You don't see "hordes" of hams of any type there. But don't tell me
that we don't experience QRM from Canadian SSB stations in the US CW
bands. Maybe you're a little close to them, I am not. Imagfine what THEY
would experience if every US ratchetjaw with a bloated KW could do SSB
down there. They might as well toss in the towel, right along with ALL
low powered CW. I rarely ever use an amplifier these days, but I can
assure you, it'd be KW day every day on CW if I had to compete with the
smug SSBers all the way down.
The subbands were put inplace initially for a very good reason, a
reason which still exists. To change that would introduce chaos unknown
heretofore.

>
> Even in the US, 160 meters has no such "protection", yet
> SSB, CW, and even AM stations seem to coexist just fine
> on that band.

Yeah- the hndful of hams who can get enough antenna to radiate a useful
signal on the band. We gripe about CCCR's and the severe antenna
restrictioins they cause, and we work around them. But not effectively
on 160 meters.

>
> Waffle all you want, but the evidence disproves
> your "the sky will fall on CW" jeremiad.

If that's what you use for evidence the trial is certain to be a flop.

Your Technical Plus license will be renewed as Technician, and it is general
believed that you will retain your current Technician Plus HF privileges.
You must save all of your old FCC licenses and VEC CSCEs to insure you have
proof of passing the 5 wpm code exam.

You are not required to take any additional exams. However, I would
recommend that you take the Element 3 written test (35 questions) as soon as
possible, which will advance you General class licensee.

And, if the Boy Scouts didn't have this policy, and one of the boys
were molested, there would be multi-million dollar lawsuits involved.
Look at the pile of lawsuits directed at the Catholic Church after
several "gay" church leaders molested some boys. What other choice
does the Boy Scouts have? In my opinion, this policy is an absolute necessity.

Yup, not a bad idea at all. Bury 'em under a pile of tapes & letters.
The last thing the FCC wants is pointed questions from Congressmen
about anything and a heap of tapes oughta generate some of those
questions.
>
Which of course the FCC would dump right back on the Congresscritters
for not having enforcement monies. But somebody gotta make a stink out
of it to get the ball rolling or nothing will happen again.
>
As far as hams really getting the goods on the sumbitches is concerned
hams can't DF 'em with tribanders and tapes are all stale
privately-gathered post-facto evidence. Would not carry much if any
weight in legal proceedings.
>
On the other hand the FCC monitoring stations have very sophisticated
DFing capablities, they can nail a transmitter location within a block
or two from a half continent away in real time. We need an 800 number
hotline to the monitoring stations so that we can put the FCC directly
on 'em in the act. Or maybe a pasword-protected instant messaging
link.

Read your sentence again, Cecil. You said the "set of laws" you are "forced to live under." There is only one Blue Law that you live under - the one in your county or town. So where are the plural "set of laws?" ;-)

Why sure Jerry,

I'll be quite honest though. I'll "rat" out anybody whose illegal operation interferes with my (read our) legal operation. That merely means that I basically take a similar stance to the FCC's "apparant position; You need to attract my attention first. I will NOT be sitting around monitoring the freeband and keeping a log, etc. An errant freebander needs to slip the noose around his own neck. Please don't tell me that they do that by just operating in the freeband, there are many low power stations that we will never hear unless we go looking for them. Quite frankly, I've got better things to do ON the amateur bands rather than OFF on 11 meters.

I have done, do now, and will continue to take a very proactive stance against those who encroach upon our 10 and 12 meter bands. No, I don't lump them all into the same basket. The trucker running a 500 watt amp transmitting on channel 19, "2 up" in the 10 meter ham band greatly concerns me. The guy running 25 watts into a 3 element yagi with good RF grounding who works some DX in the freeband does not. (Besides, that's the guy who'll eventually move up to bigger and better things and get his ticket.) Some might disagree with me and that's ok, that's what makes the world go around. As for letters to my local and congressional representatives, I'm way ahead of you...on a variety of RF related matters.

It's probably more than double that, but think of what your city or county pays experts to testify in criminal proceedings. While these would most likely be misdemeanor offences, a typical community would only need a few high-profile cases and the rest would back off.

No, although I was DL4RQ for a couple years in the early 60's. Things are sure different on the bands when you leave our shores. I even find it radically different on the bands when on the West coast than here in the center of the country. Probably because there, on one side is nothing but water, with all the ham activity to the East instead of on all sides as here. You may experience some of that from near the south border.
I can tell you that nowhere on the planet exists active hams running higher power in the numbers found in the USA, and for sure not the independent minded individuals. As Larry said, in most other countries most everyone does what they are told, including hams. Here? Well,....
The sheer numbers alone would soon close down all but QRO CW in the event FCC abolished all band mode segments. Since there are far fewer CW ops running high power than SSB ops, the end result is obvious. Many, if not most CW ops would just toss in the towel before long, and quit ham radio. There are many who are on the edge of it now. I know several who have been inactive for years but keep their tickets.

Those of new licensees, of course.

That's true, the Supreme Court ruled in1856 that the police are not responsoble for protecting individuals, rather society as a whole. Got that, gun bashers?

> I assume the same principle applies to the FCC.

No, FCC has been sued *by ARRL* a few times. Last time I dropped my membership it was because they sued FCC over something I considered to be far less important than the ill will the lawsuit was certain to generate at FCC HQ.

They don't like busting hookers, bums or public drunks either, but when the influential folks about town raise a stink, they're out there on-the-double. When a small aircraft misses the runway at the county airport and crashes into a school and someone speculates that 4th or 5th harmonic radiation from a "Texas Star" 6.4 kW (non) linear may have taken out the navigation system, then you'll see more interest in the regulations.

Actually, Phil, effective regulations are already on the books, as you know. Typical Use-Permit regulations will allow antennas under imposed resitrictions, but those restrictions generally require FCC authorization as a minimum condition. I know that's true with both the Sonoma County and Petaluma city regulations. Exisiting Planning and Land Use regulations could at least require the removal of the antenna. That area of law is "well settled".

I think the FCC is already doing the stings. I read a few months ago about one in Washington or Oregon where some mom 'n' pop CB shop got popped several thousand bucks.

That's not pressure. Walking into Rep. Snarf's field office
and having a face-to-face with his field rep and explaining in a
professional manner why the problem came to exist and how it can be
fixed is a bare-minimum start. They say that a face-to-face is
equivalent to ten thousand votes.

But no officer ever wins a battle. The foot soldier is always the winner, if there is one. The general just calls the shots. If the troops don't perform its all a lost cause.
This has always been a big advantage we have had in war. When our officers fall, there is always some lower ranking person who steps in to fill the gap. Most of our enemies troops were lost when their officers were neutralized.

I think all the above, in quantities that introduce the applicant to the basic concepts. Of course there was once an Extra class exam that went far beyond the basics. That's long gone.

I'm not a rapist because I have never unlawfully forced a person to have sexual intercourse. And I'm fully prepared to bring forth as evidence any person with whom you claim I have done otherwise. Therefore, to any reasonable person (and the law), I have proven a negative - I'm not a rapist. True, such evidence would not satisfy an unreasonable person, but I'm assuming you intend to be reasonable during this discussion.

And, sorry, I have never asserted a thing, Cecil. I have never once said during this entire discussion, or in any prior discussion I remember, that a supernatural realm exists, or that a god exists. You, on the other hand, have asserted here, and in previous discussions, that god does not exist. Therefore, between the two of us, the ONLY person making any assertion (positive or negative) is you, and I'm asking you to provide evidence to support the only assertion made - yours.

In fact, so far, the only ones offering any evidence whatsoever to support their assertions are those members of the various religious communities - the testimony of a few hundred million believers. I haven't seen a thing from you that even comes close to equalling that.

Dwight Stewart

I thought I had already addressed that. Wait a minute, I did. In a previous message, I said, "Those blue laws are based on community standards, Cecil. Your community obviously has a good number of people who, for whatever reason (religion, or they just don't like drunks), don't want people to buy beer on Sunday. If those laws were truly based solely on religion, there would be no beer sales at all (any day of the week)."

>NCI opposes the code test and that's it. Use it if you
>like it. NCI has no opposition to code USE at all.

The avowed purpose of that organization is to end code testing for any amateur license. But that's not the only purpose.

Several years ago, there used to be a statement on the website that when all code testing for any ham license was gone, the organization would fade away. That statement is no longer there.

Some time back, a VHF/UHF group petitioned the FCC to create a 300 kHz subband at the bottom of 2 meters for "narrowband modes" - meaning SSB, CW, and data modes narrower than a certain bandwidth. This petition had absolutely nothing to do with code testing in any way. Yet NCI filed comments in opposition to the proposal, calling for "no protection for 'legacy' modes". If NCI's only concern is ending code testing, why did they oppose this proposal?

>2001.

No, you did more than that. You made statements about those numbers which were clearly in error. Like claiming that ALL Technicians have NO HF privileges.

> Miccolis considered this "faulty," "mistaken," "error," etc.
>because I did not include changes that were not available, not
>tabulated.

They ARE faulty, because no allowance was made for factors which clearly affect the numbers posted.

Your logic on this is like someone saying that since they don't know the exact amount of rainfall in a certain location, they will assume that it never rains there and make no allowance for rain.
>
>>You agree, then, that your work is faulty. OK. Why should anyone accept your
>>faulty work?
>
>No agreement on "faulty work." I gave my sources and numbers.

>"error," and "mistake." :-)

No. PROOF of faulty processes. Which you refuse to accept.
>
>>I don't like analysis METHODS that are faulty. Such as counting months
>twice,
>>which you did.
>
>Nope. Was counting only 10 months, as stated.

One month got counted twice, because it had already been added to the total licenses.
>
>There was nothing wrong with my method.

Yes, there was. Several things. Shall I go over them again?

>Some, like Miccolis, didn't like the results.

I don;'t like sloppy work. You did sloppy work, Len. Simple as that.
>
>> Or ignoring the reclassification of Tech Pluses as Techs upon
>>renewal, which you also did.
>
>That's true. However, despite Miccolis' following demand of
>"fault," Miccolis did not adequately explain how many such
>reclassifications there were or their impact on my numbers.

Yes, I did. The AH0A data shows well over 3000 Technician licneses renewed
after April 15, 2000 but before November 15, 2000. Every single one of these
has to be a Tech Plus reclassified as a Tech, because no codetestless Tech
license was eligible for renewal before November 14, 2000. Later, Jon Bloom
posted that at least 7079 Technician licenses in the FCC database have a "P"
(for Tech Plus) in the "former license class" field, as of a few days ago. I
posted all of this information right in this thread, but you ignored all of it,
because it clearly shows the errors of your methods.
>
>>Or assuming that NO new Technicians upgraded in

So? The subject line of the thread is "Restructuring -- did it make a difference".

>That would introduce errors for a post-restructure
>observation

There's no requirement that all observations MUST be "post-restructure". What "errors" are introduced by including those two weeks? Can you quantify them?
>
>Miccolis refused to accept any buffer time in April or May 2000 in
>order for FCC licensing and databases to become updated.

Why is such "buffer time" required? KC8EPO has have posted that some people found their April 15 upgrades in the FCC database as soon as April 19 - just four days.

>At
>one time Miccolis insisted that all must count all of April 2000
>class data without giving any valid explanation.

Not correct. I simply countd it in my numbers, rather than ignore the month of April. You have not given a valid explanation of why all of April and May 2000 must be ignored.
>
>Miccolis continues to ascribe everything in terms of "faulty,"
>"mistaken," "error" etc. over and over and over again as if
>that is a valid or justified counter-argument.

I have given my counter arguments. Do you want to see them again, Len?

> Such is nothing
>more than polite ad hominism.

How? Show your work. Prove that the mistakes I cite are not mistakes at all.

>> You haven't done that - all you do
>>is edit out my proof of your errors and attack the messenger. Then you toss
>>in some dirty words for some reason or other.
>
>Miccolis' "proof" was considered in the obvious light of opinion
>at the time of trying to show that newcomers were somehow

>thronging to HF bands.

Now you claim to read minds. Again.

> My observation was simply on the class
>of license based on readily-available tabulations of publicly-
>available data.

So were mine.

> That data did not include precise numbers of
>changes in class over the 10-month period because such
>tabulations are no longer done at the website I used.

So you ASSUMED that the changes were ZERO in a 10 month period. See above example about rainfall.

> Miccolis
>insisted that it "should be done" and then statedd that my
>observation was "faulty" because I did not use available data.

I wrote that not allowing for factors like upgrades and reclassifactions from renewal was a mistake. And it IS a mistake to assume that such factors have zero effect because you don't have the numbers.
>
>>Nope. I'm acting like a real engineer, who wants to see how the conclusions
>>are derived, and who won't accept sloppy thinking and faulty handwaving
>>processes.
>
>Hmmm..."sloppy thinking" and "faulty handwaving." Is that the
>description of observation of tabulations of classes of amateur radio
>licenses over a stated period using information available to all?

It's an accurate description of what you did when you assumed that NO Technicians upgraded in a 10 month period because you can't get upgrade numbers from the AH0A site. It's an accurate description of what you did when you claimed only 59 Technician Pluses were reclassified to Technician in a 10 month period because you can't get direct reclassification numbers from the AH0A site.
>
>>Worse yet, I won't be bullied into accepting something because somebody
>calls

HAH! That's funny, Len. You do it to anyone who opposes you in this newsgroup.
>
>>>The trend of newcomers going to Technician was there before
>>>restructuring. It continues.
>>
>>And as I have said dozens of times: NOBODY DENIES THAT!
>

>I do not recall Miccolis saying that more than about five or six
>times. That is less than a dozen. [fault! error! mistake! :-)]

The mistake is YOURS, Len. I have written it here dizens of times in the past
3-1/2 years. Your failure to remember it is not my problem.

>>>Such is heresy against Conventional Wisdom (CW) of the
>>>long-time ham conservatives.
>>
>>You said that - not me. Why do you deny that ANY of them upgrade?
>
>Denial was not in any of my observations. :-)

It was in all of them involving Technicians
>
>Nor is the "explanation of what happens in a 'real engineering'
>environment" germane to any discussion of tabulated data of
>radio amateur licenses after April 15, 2000.

Why not? Because it shows you to be in error?

>This forum is decidedly NOT any sort of "design review."

Sure it is. People present ideas, and those ideas are reviewed and discussed.
Often faulty logic is pointed out. Some folks, like you, Len, don;t like having
their faulty logic pointed out in public.

>>> Avocations are NOT engineering.
>>
>>Many of them require engineering. When a ham puts up a tower, it better be
>>engineered correctly, because if it falls down and causes damage, the fact
>>that it's "avocational" doesn't mean a thing.
>

>
Completely relevant. You just don't like it.

>>The status quo is now one code test and three written tests.
>
>True.
>
>>The status quo is
>>now that support for code testing is only kept alive by the treaty
>>requirement.
>
>Incorrect. All that has been said in regard to post-restructuring
>is that the FCC did not remove Element 1 (code test) due to
>ITU-R S25.5. Nothing at all was said by the FCC as to
>longevity of any code test.

The FCC wrote that there was no regulatory reason for code testing except for
the treaty requirement. They also refused to accept - in fact they denied
straight-out - several commonly-given reasons (like "emergency

communications") as a basis for ANY code testing. That means if the treaty requirement is eliminated, there will be no regulatory reason whatsoever for code testing.

Regulataing is what the FCC does. If there's no regulatory reason for something, it will end.
>
>>The status quo is that support for that treaty requirement is
>>decreasing.
>
>No. That is merely conjecture on Miccolis' part.

Not conjecture at all. In the comments to the restructuring NPRM, support for code testing beyond the 5 wpm minimum was in the majority - but a very slight majority (57% at most). In previous NPRMs, the support was much higher.

At the most recent Region 3 IARU meeting, only the ARRL voted to support continuation of S25.5. All of the other member societies voted to support its removal. This is a radical change from but a few years ago, when support for S25.5 was near-universal. Now the ARRL BOD has removed its support from S25.5.

>There is no
>mention of any debate-discussion of ITU-R S25.5 in any
>agenda for WRC-2003. Until that happens the status quo of
>S25.5 is that it remains as-in.

What I wrote was that support for S25.5 is decreasing.
>
>>The status quo is that the code test will disappear shortly after
>>the ITU meeting in 2003.
>
>No again. Miccolis' sentence is simply a rewording of the
>previous sentence.
>
Not at all.

We shall see in 2003.

>>They aren't? How many "newcomers" do YOU know? How do you derive such a
>>sweeping statement? From your "beliefs"?
>
>Irrelevant and unproveable by data. My conjecture has no
>"poll" or other data.

Typical. You don't know any newcomers, but you want to indoctrinate and set the standards. As if.

>>>radio amateurs are Technician class. The vast majority of that
>>>class has not taken any morse code test
>>
>>Ahhhh - BUT SOME OF THEM HAVE! At least 7079 of them, and probaly many
>>more.
>>Which means they are NOT all "noncodetested" or "non-HF licensees".

>
>Please note what I wrote: "Vast majority" which does not mean
>"all." Vast majority is a subjective quantity but generally taken
>to mean more than half, usually more than three-quarters.

Previously, you claimed that Technicians don't have any HF privileges, CSCEs or
no CSCEs. You also lumped all Technicians in the "noncodetested" category.
"ALL" is pretty inclusive.
>
>>Pure wish-fulfillment and speculation on your part, Len. Nothing else.
>
>Speculation based on varied media and personal input.

That's just a rewording of what I wrote.
>
>>You
>>don't know how many have taken the code test, so you ASSUME nobody has.
>
>The exact, quantifiable numbers are not available on who took
>a code test and who did not.

We have a lower bound of 7079. A lot more than zero.
>
>Note that I never wrote "nobody (of Technicians) had taken a code
>test."

You lumped all of them in the "noncodetested" category, with no HF. Same thing.
Also incorrect.

> Ergo, there can be NO "assumption" as charged.

Disproven.
>
>>You deny the stated proof that thousands have taken the test.
>
>Absolute nonsense, incorrect, faulty, and full of error statement.
>No, absolutely NO such statement was made.

Yes, it was.
>
>There is NO quantifiable data of any kind to state how many
>radio operator code tests were failed, not taken, or anything
>else.

The point is the tests that were PASSED. We know about those. You assume they
don't exist.

> What the long-timer conservatives seem to insist is
>that "thousands and thousands have taken a code test" as if
>that "proves" something valid for any radio operator examination
>in the future.

Nonsense. Nobody claims anything of the sort.
>
>>Of course. That's what they said. So? They said that 4 license classes was
>>the best thing for ham radio in the NPRM, then dropped it to 3 in the R&O.

>explained in an R&O, the Report and Order.

well, duh. You missed the point. Again.
>
>"They say all kinds of things" is a non-sequitur about the FCC. The
>FCC is the regulatory agency of US civil radio. All civil radio
>licensees ("civil" in denoting non-government, non-military radio)
>must obey the regulations of the FCC.

And they make mistakes. Also change their minds. Say things that make no sense at all, contradict their own rules, require additional corrections, etc. They ain't perfect.
>
>>Uh huh. Instead, they should buy YOUR "belief set", founded on hate of
>>anything that you don't like.
>
>I am simply
>advocating a belief that a morse code test for an amateur radio
>license is not needed for licensing purposes in regulation.

You're doing a lot more than that.

> The
>FCC agreed with that viewpoint in 1999 and in 1990.

Then why do you think there will be code testing if S25.5 is removed?
>
>>Try admitting your mistakes instead of attacking the messenger.
>
>No problem. When I make a true error, I acknowledge it.

HAH! That's REALLY funny!

>I will not
>"acknowledge" any "false" errors charged by those who insist on
>responses that suit their opinions.

In other words, you won't admit a mistake if the messenger holds opinions you don't like. Regardless of the proofs posted.

Typical denial.

"Ill will" ??

The FCC is well aware that the ONLY remedy that an aggrieved party
has is a suit in the US Court of Appeals. Thus sayeth the Comm Act.

They field them every day, most brought by entities whom the public
perceives to have a "sweetheart" relationship with the agency.

Sneaking around the back door via the Congress for anything but
increased funding generates real ill-will.

I'm just trying to get you to realize that 50 years ago, tubes were
components. In 2001, *transceivers are components*. Times have changed,
Dick. The ARS cannot return to the 50's.

I sit here thinking about how many times I've heard that story - "I've
tried and tried, spent hours, weeks, months trying to learn the code and
I just can't do it'. But when you dig into it, all that time was
actually NOT spent in what the party really thought he was
doing...Either he had a terribly wrong technique or he was not really
spending the time studying code at all. Does he actually have a mentla
disability which prevents him from learning the code at any speed? Do I
believe he does just because some doctor said so? Not at all. They'll
always find something that the patient can use, whether or not it's
real. Maybe it is, maybe it isn't. Doesn't matter does it? I've seen a
lot of people who thought they couldn't do it but darn few who couldn't.

But all that is trying to prove a negative and we all know you can't do
that don't we?

Dick, there is not a ghost of a chance of making radiotelegraphy
unavailable within the ARS. Why don't you choose to worry about
real problems rather than delusional ones?

> > Some
> > of us simply want radiotelegraphy to stand on its own merits and not

You opinion is obviously that radiotelegraphy doesn't have enough merit
to ensure its survival without a governmental affirmative action program.
I disagree. But if you're right, and radiotelegraphy lacks enough merit
to survive, then it deserves to go the way of buggy whips.

> When will the lockup occur? Do YOU know?

Nope, and you don't know that it will ever occur. The possibility of its
occurrence is not a good enough reason to force every HF ham to pass a
Morse code exam. That waste of manpower is staggering.

The only grounds for a successful suit against administrative
agencies are that the agency is not following the law or its own
regs or if there is a major issue of public policy.

In communications regulatory law, a "major issue of public policy"
does not include anything having to do solely with amateur radio.
(Sorry, guys.)

IIRC the League claimed that the Commission did not follow case law
on administrative procedure (the "arbitary and capricious" rule) in
reaching its conclusions on the transfer of 220-222 MHz, but the
Court of Appeals did not agree.

The point is that most other countries don't have bands sliced up into
legal and illegal modes and they seem to get along just fine. Even in
this country, I rarely hear anything except CW in the lower 25KHz even
though the other digital modes are legal there.

I did specify the set to which I was referring. They are called blue laws.

Don't know much about Texas, do you. There exist state-wide blue laws.
Those are the ones I object to.

> You have an inalienable right to buy alcohol on Sunday?

You bet your sweet bippie! The blue laws are absolutely a violation
of my civil rights.

There is no way you can prove that statement so using your logic of
accepting things without evidence, we must assume you are indeed a
rapist. I, OTOH, believe that hard evidence must be presented to prove
anything.

> You, on the other hand, have asserted here, and in previous

More of your mind fornication. I have done no such thing. I have
asserted that I have seen no evidence of the existence of a God.
That is the absolute truth to which I will swear on a Bible.

> "amps" on it.

As has been stated many times before, this law does not require any special electronics skill to enforce, Jerry. All CB radio equipment has a type-acceptance label on it, so anything attached to the antenna connector of a CB radio without that label is illegal. The same thing with the radio itself - any radio without that label is illegal. It is just about as easy to check power output of a radio using a simple power meter calibrated by the local electronics shop (the same place police radios are worked on). And a cop can be taught in two minutes to check for modifications to allow operation outside the proper frequencies (turn the knob, look at the dial, etc).

And that is more than enough probable cause to seize the radio for evidence. And, just like any other evidence seized, that radio can then be tested by a electronics expert, and that electronics expert can be called into that courtroom to testify if needed.

Enforcement of this can be handled easily by local officers, and no special skills are required.

> 2. *Would* they consult FCC for advice as
> provided for in the law before declaring
> a licensed ham's station "illegal" and
> ordering him off the air, or confiscating
> his equipment.

Jerry, as you should well know, this law specifically excludes any licensed radio operation. In fact, HR-2346 requires any local law to specifically state that exclusion in writing. Therefore, HR-2346 does not give local enforcement officers any authority over ham radio operation. Simply show your license and the officer has to walk away.

As for the person who asked about this, that bill (HR-2346) has been passed by both houses of Congress, and signed by the President, so is now the law of the land. Therefore, if you want more enforcement of CB in your area, feel free to contact your local law makers (city, state, or county). Be sure to provide them with a copy of HR-2346 (or now 47 U.S.C. 302a, as amended).

I was given a life membership in the BSA as noted, since I am a
choadswallower. I cumgargle on one side of my mouth and recite poetry with
the other. If I slur my poetry, it is because I have not swallowed the choad
yet. I like to swish it from one side to the other and savor the texture. A
good choad load is like a fine wine...I swish it to and fro and enjoy,
enjoy, enjoy!

I was wondering about my preferences toward 12 year olds.. I mean, take a
look at this
photo of my 12 year old neighbor boy. Heck, even my mommy approves. She even
washes his underwear when he visits me on the overnighters. We share hot
chocolate and wish that Michael Jackson would invite us for a weekend visit.
I have wet dreams about Michael one day sweeping me off my feet and swishing
me away to Never, Never Land where we can have beautiful sex with his
chimpanzees and bleach our skin.
My mommy just does not understand. She says I am ill.

Oh, you mean the League sued the FCC claiming that
their agency's action was not in conformity with 5 USC 706.
Interesting, please site the case and year.

We know today that the Morse code exam requirement is
unnecessary (arbitrary), but was the action capricious?
It not necessary to show that an agencies action
was capricious, but it would help. So along comes
Mr. Hollingsworth issuing punishments and sanctions against
amateur rule violators. The one of punishments and sanctions
is CW operation only. The FCC must consider one of
its the primary exam elements a form punishment.

Capricious?

Thanks Dwight,

I am "the person" who asked about HR-2346. By "anything attached to the antenna connector of a CB radio without that label is illegal," may I assume that you're referring to amplifiers?

You see, I fed a home-brew two element quad with ladder line via a transmatch from a stock Uniden Grant XL.(40 channels & 12 watts) There is certainly no "type-acceptance label" on the transmatch. Just curious. Thanks again.

What about laws that evolve to be capricious? There's a law
still on the books in my home town that anyone must first
contact the sheriff before bringing a horseless carriage
to town.

Yep, I was referring to amplifiers. As for the transmatch, I suspect any law written will be a little more specific than the one quick line I gave in the previous message ("anything without a type-acceptance label attached to the antenna connector"). In other words, there will probably be more elaborate definitions of the various illegal devices, so I wouldn't worry too much about legal devices like a transmatch, antenna tuner, power meter, SWR meter, and so forth. Of course, it's in all of our best interests to keep an eye on any of those new laws to make absolutely sure the locals do it right.

By the way, have you ever tried anything bigger than a two element quad? Years ago, we put up a six element quad at a friends house (he paid me to build it). I was an absolute blast watching that huge thing spin around (especially since he lived in a trailer smaller than the antenna). Sadly, it didn't make it through that first Washington winter - his tower broke, bringing the whole thing down to a rather unceremonious ending.

THANK YOU JIM!!!!

The fact that Carl Stevenson wrote the opposition view and that fact that
Carl Stevenson had made it very clear right here (according to the
archives)in the EXACT views and words or said opposition, has nothing to
do with separating personal views and NCI policy.

Sure...and Dinosaurs still roam the earth, especially in parts of Texas
where Monroe County residents have the DNA of unripened bananas.

But of course, times have changes and so has NCI policies. (see last
sentence of above)

Well, I'm trying to but it is a difficult environment where everyone
spells out the rules of what "should have been stated" some time
after a debate-discussion-argument has started. :-)

In another thread there is chastisement for "not stating numbers"
which were clearly stated in the beginning, then more criticsm
for "not stating correct numbers" about those "non-existant
numbers."

Now you are stating that the FCC's EM spectrum auctions are
"contracts awarded to the lowest bidder?" Sorry, I can't find
that in the FCC Handbook. Please explain.

I'm having trouble finding information on the FCC website that
tells of "ham band auctions" that may take place in the future.
Any tips or information on such future activities would be
appreciated. Thank you.

Nursie is trying to waffle on this one by trying to change the subject
in a following message in this thread.

I'm still waiting to hear who (or whom) I was supposed to meet
in person in the last year, last two years, or last three years
who is also a poster in this newsgroup.

I remember anyone I've talked to in person going back at
least ten or more years.

I think nursie is seeing people that aren't there...

Chuck Yeager's Bell rocket plane was named "Glamorous Glennis."

I don't know if he ever had a P-51 of his own, but it's not in the "survivors" list of Mustangs at:

www.p-51mustangs-aliveandwell.com

The closest one there is "Glamorous Gal," a P-51D-30NA, tail number N251HR owned by Howard Ross.

Oh, my, bigbadassmarine is all a-twitter over profanity!!!! :-)

[no wonder the USMC let him go...]

Nursie has to show actual, real quotes of the above "liberal use of profanity." Emphasis on liberal.

[you are unaffected by criticsm but the word is "ineffective," nursie]

>>A lot of discussion on Marine Radio isn't about ham radio at all.
>
> It is when that operation fosters illegal operations that migrate to
>Amatuer allocations.

There are no amatuer allocations in US radio.

Nursie consistently writes on amatuer radio. Tsk, tsk, tsk.

> If you think that's the reason any of us are adamantly against the
>proliferation of CB type operations on unauthorized frequencies, you are a
>bigger idiot than I thought, and Lennie, I already know that you're a pretty
>big idiot.

Nursie has a vivid imagination...and no life experience awareness of the entire 42 year span of CB.

> Putz.

Nursie uses this word a great deal. It is a not-nice word of Yiddish equivalent to the colloquial American "dickhead."

Whether written in Yiddish, English, or American, it is still profanity. Since nursie uses it so much, nursie looked in a mirror when charging "liberal use of profanity."

Tsk, tsk, tsk.

<snip to another item taken out of context>

>>...now why must there continue to be a morse code test for
>>amateur radio licences other than ITU-R S25.5?
>
> YOU are the ONLY one arguing this, Lennie.

Incorrect. Faulty. Error. Mistake.

>The rest of us have tried to
>move on, but you keep INSISTING that "EVERYONE" is trying to somehow retard
>the growth of Amatuer Radio by insisting on keeping code testing.

Again incorrect. Faulty. Error. Mistake.

Test element 1 for a US amateur radio license examination is
still code testing, still required for a General or Extra class
license.

> Like it or not, just about everyone here EXCEPT YOU has accepted the
>fact that the FCC will dispense with code testing after the treaty has been
>ammended and ratified.

Once again incorrect. Faulty. Error. Mistake. Tsk, tsk, tsk.

Firstly, the "fact" is nothing of the kind. It is just a supposition
by nursie and one or two others in here.

Secondly, the FCC has said nothing about "dispensing with a
code test in the future." The FCC said only that, in 1990 and
1999, that the code test is not considered of sufficient value
for the FCC's purpose of licensing amateurs as part of its
amateur radio regulation task.

Thirdly, the current ITU-R WRC agendas for the whole
conference in 2003 and the preliminary conference in 2002
have nothing about S25.5 (commonly and mistakenly
called "the treaty") alteration, modification, or changing.

Note: Only S25, the entire body of ITU-R amateur radio
simplified standards is indicated as being an assignement
of Study Group 8.

> We forgive you for being ignorant, Lennie.
>
> We forgive you for being arrogant.
>
> We even forgive you for being intolerant.

Nursie should do something about those multiple personalities.

> But the "Persistantly Nagging" thing is really getting to be a problem.

Well now, nursie does admit to her obsession. There is always
optimism for a cure when the patient recognizes her disorder.

> Again, whether any one of us particularly like or dislike the end of
>code testing, we are getting on with the business of BEING Amateur Radio
>operators.

Are all of nursie's multiple personalities officially and credentially
licensed or just one? Interesting law condition which might even
tax the fine legal minds mumbling in here.

>That gives us a LOT of room to navigate in, from the basement of the RF
>spectrum to daylight.

Actually, not as much as claimed. US radio spectrum allocations
go from 9 KHz on up to 300 GHz. [anything above 300 GHz is
not allocated] There are no allocated US amateur frequencies
below 1800 KHz.

The "basement of RF" is ELF used by USN submarines for
world-wide underwater communications (by data, not CW).
Nursie has made no claims of USMC experience in ELF.

"Daylight" could be roughly 1000 nanometers (actually the IR
component of daylight) at a frequency of about 300 THz.
Several have wondered if nursie has seen any daylight.

> On the other hand, since you refuse to get a license, you are stuck with
>Part 15 devices, CB radios and TV remotes.

There has never been any "refusal to get a license." That is in
nursie's vivid out-of-body imagination working overtime.

My discussion, when not spent 95% refuting nursie's erroneous
and false charges, is about the elimination of the code test for
an amateur radio license.

Also, nursie's list of radio services useable without an amateur
radio license is woefully inadequate. All of broadcasting,
private land mobile radio, aviation radio service, several fixed
land radio services do not require a license to operate...just
for starters. Title 47 Code of Federal Regulations explains it
all...dull reading for those liking Archie comic books but it is
the law for US civil radio.

> Once again, Lennie the Licenseless is relagated to being on the outside
>looking in...doomed to be the sopping wet kid with his pitiful nose pushed up
>against the bakery shop window.

Now, now, nursie, you are getting all twittery and fluttery again.

There is no "doom" or other so-so word pictures, nor any personal
gain in arguing for the repeal of the amateur radio code test.
Nursie apparently cannot understand that simple fact and lets her
vivid imagination (or hallucinations?) rule the four brain cells that
process reality.

> Lennie is the Darth Vader of RF.

Nursie runs rampant with fiction again. :-)

Has nursie ever taken the temp of an SSME? Made or even
held a space-rated payload? Communicated with a station
ON the moon?

No? Poor nursie.

>We all know that inside is a nice guy
>who WANTS to be a part of the party, but he has been too long swayed by the
>Dark Side...

Oh, my, truly hallucinogenic! My advocacy in here is to eliminate
the amateur radio code test. The TEST. Hello? Does nursie
suffer from too much QRM at her QTH? Too many trips to the
white room medicine cabinet?

>It won't be until his demise that he finally realizes that it
>COULD have all been his.

Nursie is not immortal although her other persona (as the
Emperor) thinks she is. It is strange that a medical health
professional (assuming hospitals actually pay her) has such
a preoccupation with death and mortality in others...and
trying to use that against them. :-)

Is an amateur radio extra class license the epitome of
nursie's life, the "all?" Oh, my, what a limited narrow view.

Gestalt ain't what it used to be. :-)

>"An America Not Prepared For Steebie In Newsgroups Will

>>
>>Nope. I stated the source of my observations, gave some numbers.
>
>Actually, you have it backwards. I stated some numbers, and you took issue
>with them.

Incorrect. I posted a reply to Hans Brakob's message, giving numbers and the source for those numbers. Miccolis had to jump in after the fact.

>You also derived some numbers by faulty methods. Like your claim of 59
>Technicians reclassified from Tech Plus.

That was not a "faulty method." The "59" number value was the difference between the total number of Technician license class increase in a ten-month period and the number of new Technician licenses in the same period. That was stated at the beginning of a reply to Miccolis' claims of "faulty methods." A difference of numbers, stated as such, is not "faulty" unless the arithmetic is faulty.

The original subject thread began with the effects of restructuring following the April 15, 2000, change. Miccolis tried to use data prior to that date to indicate post-restructuring effects. That in itself is faulty and misleading since it lumped pre- and post-restructuring data together instead of making a comparison.

>You also made statements that are clearly incorrect, like Technicians with
>Element 1 CSCEs having no HF privileges.

No. I said nothing about "Element 1 CSCEs having no HF privileges."

Neither did I say anything about "Easter Bunnies" although Miccolis seems to claim that I did.

>
>Like what? And by whom? Give us some examples, Len, not these vague claims.

"No CW = No Ham. Know CW = Know Ham." Not a "vague claim" but rather a common statement that shows up in this newsgroup from time to time.

Those alleged "vague claims" have shown up in here constantly under true names and pseudonyms. One can begin with Kehler, KH2D, continue on to Roll to Carroll to an assortement of individuals ranging from ex-USN chiefs (not Brakob) to one younger hotshot who even made up a webpage (trying to copy Kehler, but doing it badly) against the NCTAs and even appeared in the 98-143 NPRM comments. The comments of many PCTAs is publicly documented among those 2600+ documents given by the FCC. The support for code testing and emphasis on HF above all else is like a litany of reasons found in old ARRL documents. It is a virtual hymnal.

Labeling tens of thousands of words in publicly available documents as "vauge claims" is itself faulty to an extreme extent.

The trend prior to restructuring had new license growth coming from the new Technician class licensees. So much growth that it offset the attrition from dropping code-tested license classes. The net result was a small increase in the number of total ARS licensees. That trend continues following the April 15, 2000, date with very little change due to Technician Plus renewals shifting to Technician license class.

My only dispute with Hans Brakob's posting was relative to the number of radio amateurs with HF privileges. I did not observe any great change, only a continuation of the trend that had been on-going for several years. I still hold to that observation regardless of allegations of "faulty methods," "errors," or "mistakes" levelled by long-timers who seem to wish things were otherwise.

Probably an Instructrograph but it doesn't matter. If your language processor doesn't work for 200 milliseconds out of every second, you will never be able to copy 13wpm Morse code perfectly for one minute.

If that is tantamount to its demise, then that doesn't say
much at all about the claimed value of morse, be it
based on capability of morse (vs other modes), be
it for the simple enjoyment of morse or both.

Seems to me that the use and enjoyment of archery
hasn't ended because no formal need exists for any
following. Likewise there's still a significant following
of people that prefer and buy cars with manual gearboxes...
indeed there is enough of a following for both these
skills that products are still being made to accomodate
that niche market.

> Why do I really believe that is a huge mistake?

I dunno Dick, tell us.

>From another venue:
>"A book with the simple title "Complexity" says that all self-adaptive

Your point?

> I have seen too many failures of high technology to believe that it is
>the total answer to all human needs. It only gets worse with added
>complexity. When will the lockup occur? Do YOU know?

It's not something I give any creedence to, much
less worry about. To submit to such "doomsday"
thinking gains us nothing. We prepare fro the
unexpected as best we can. If we really all were so
concerned about being "ready" for even everyday
emergencies, we'd all be mandated by government
to be CPR certified, to all know how to drive, etc.

Cheers,
Bill K2UNK

The CB problem is NOT so adverse that any one community
is likly to have even one really "high profile" case. Larger
metropolitatn areas might, but that is not so in suburban and
rural areas where police won't care to begin with. I live in a
suburban/rural area and have regular contact with other area
has. Haven't heard of any real "CB problem" on 10m here.

How many of said "influential" folks in any town have
any concern at all over CB vs ham vs anything. It is
NOT a concern to most governing odies at all. More likly
the case that we, as hams, are viewed by those same "influential"
folks as a nuisance because of our antennas, towers, etc.

>When a small aircraft misses the runway at the county airport and crashes
>into a school and someone speculates that 4th or 5th harmonic radiation from

>"well settled".

Most towns allow antennas except where the size of the
support structure (tower) becomes an issue. You don't
need anything significant for someone to run 1000 watts
using just a vertical antenna (see any QST or CG for
many possibilities). I suspect the erection of a verticle
would violate very few actual zoning laws. If your town
allows TV antennas, then you have plenty of latitude to
erect a sufficient antenna to handl pirate CB.

I agree totally with that too. Indeed, the FCC would help
the situation if the "freeband" was given back to the
ARS service which would then make it monitored by
hundreds of thousands of hams.

>I have done, do now, and will continue to take a very proactive stance against

Labels are so easy to falsify that if there was any such
goings on, the ability to generate such "bogus" labels would
spread across the internet in less than 24 hours.

More to the point...the police MUST gain access to that
radio to see it. Does the terms "reasonable cause, search
warrant required" mean anything to you?

> It
>is just about as easy to check power output of a radio using a simple
>power meter calibrated by the local electronics shop (the same place

On what basis does the police get to "confiscate"
the radio to have that local electronics shop check anything?

>And a cop can be taught in two minutes
>to check for modifications to allow operation outside the proper
>frequencies (turn the knob, look at the dial, etc).

ROTFLMAO!

The police go through a 40 hour training class just to
become qualified on using speed enforcement radar.
Given the 100s of different CB radios, just how much training
do you think it would take to satisfy a judge that the cop
knew anything, much less enough to qualify as
an expert in court.

> And that is more than enough probable cause to seize the radio for
>evidence.

Please explaine the probable cause eveidence. I don't see
it here at all?

>And, just like any other evidence seized, that radio can
>then be tested by a electronics expert, and that electronics expert
>can be called into that courtroom to testify if needed.

Ditto my last comment above.
Also, that electronics expert gets paid $$$ to
testify. How many towns want to take on that cost?

> Enforcement of this can be handled easily by local officers, and no
>special skills are required.

Your statement is at direct odds with your other
comments above.

>operation. Simply show your license and the officer has to walk away.

How does the local cop know the difference?
Are you, therefore, saying anyone with a ham license
is totally exemp from any efforts to have CB enforcement
action taken against them? Consider Bootleg Jack
who has a ham tech licnese and still likes to
operate freeband. Hey, if the locals show up at
his house he just shows them his ham ticket and
off they go?

> As for the person who asked about this, that bill (HR-2346) has been

Of course they can. "All powers not reserved..." and all that
crap. Of course, it could be ruled invalid by a court, but
someone with deep pockets will have to take the steps to make
that happen. Meanwhile, Joe Tribander with 3 kids in college
is SOL.

Good luck on this one now, Bill!

Once again, Larry, "arbitrary and capricious" is a legal term of art in regulatory law whose definition bears no reemblance to the meanings assigned to each of the words in any other context. I've instructed you in this several times in the past and I see no need to rehash it.

If you can't apply the terms properly, don't. Stop trying to play guardhouse lawyer.

Yup, that's what the statute says. Jurisdiction fails if the suspect
holds a valid FCC station license of any type. It then becomes a
pure FCC problem once again.

>I truly wonder how many towns have acted at all under this new authority.

Beloit, WI is the city that jacked Sen. Feingold into submitting his
bill in the first place. How come they haven't passed the required
local legislation yet?

This is a really interesting thread. The sheer variety of the replies is absolutely marvelous. It'd be interesting to try and perform a "cause and effect" analysis. What is the desired effect? Take the various course of actions mentioned and attempt to unbiasedly (the toughest task, no doubt) predict the actual outcome. Compare the the desired effect against the probable one and determine how desireable the actual outcome truly is. Sir Isaac Newton suddenly comes to mind for some strange reason. Good luck, this is a nice approach. Take care and 73 to all.

Also note that a failure to enforce in any specific case or situation is generally within the agency's discretion, especially if its budget is a concern. To suceed here, one would have to show a complete abandonment of enforcement, but to counter, the agency need only show any one case anywhere in the country for the given period to overcome the abandonment argument. As long as there's one CB or "freeband" violation per year acted on, the FCC meets its burden.

Actually, it's not arbitrary nor capricious as long as the U.S. remains a party to the international treaty that requires it. Once the treaty gets morse code removed, then you're a step closer - but should the FCC retain the requirement (even for one day beyond), you can't show that it's "arbitrary" because it was historically required.

I'm not sure what you mean. Everybody has the right to comment to the FCC. So do interested organizations.

The point I'm trying to make is that when a group claims to have a single-issue agenda, but then gets involved in issues that have nothing to do with that single issue, the group no longer has a single-issue agenda.

Bingo.

There have been single-issue amateur radio groups in the past. Remember the "National Amateur Radio Council" and the "Society of American Radio Amateurs" and the influence they had?

The tapes go to the FCC, not the Congress.

For legal reasons, the FCC needs an audio tape of the intruder transmission. "Paper" reports just don't do it. K2ASP (Phil Kane) is my source for this - I kinda think he knows whereof he speaks ;-)

>>
>Which of course the FCC would dump right back on the Congresscritters
>for not having enforcement monies. But somebody gotta make a stink out
>of it to get the ball rolling or nothing will happen again.

If nothing else, the tapes give the FCC some reason to ask for more money and to allocate some of it to ham radio enforcement. I don't know the legal evidence status of a cassette tape of an alleged intruder sent to the FCC by a ham. But that's what the FCC is asking for, so let's give it to 'em!
>>
>As far as hams really getting the goods on the sumbitches is concerned

>link.

Sounds good, but I ain't gonna hold me breath.

My uneducated guess is that a tape tells the monitors exactly what to listen for. The accompanying written report tells them where and when to look. The more tapes they get, the more datapoints they have, and when that particular intruder shows up, they have a pile of goods on him.

Another uneducated guess is that the FCC operates on the "example" principle. They can't possibly nab every intruder, so they look for really solid cases and

push them hard. A few big fines sends a strong message. Having tape evidence gives them a better idea of who to go after - the intruders who show up repeatedly.

>Advocates) have no problem with you or anyone else learning and using
>code. Code learning (voluntarily) and use can certainly coexist with
>technology advances the same as my antique auto can coexist
>on the highway with the latest from the auto makers.

Bill:

Sorry, no sale. The NCTA have always used the need to "advance the state of the art" -- presumably in digital communications technology, as a primary reason to reduce or eliminate the Morse code testing requirement…as if the two were, indeed, mutually exclusive. The claim had always been that the code test requirement was discouraging brilliant, computer-literate young people who would magically transform the landscape of amateur radio communications technology if only they had the fetters of this time-honored mode removed from them. They have claimed the Morse code, and it's testing requirement, to be everything from "lame" to "ethnic cleansing" -- and insisted that those who support continuance of the testing requirement were not in step with the "inclusive" nature of this hobby, and, therefore, politically incorrect.

No, Bill -- the NCTA and their apologists throughout the years have done an excellent job of marrying the concepts of Morse code skill with technical stagnation -- thus making proficiency in Morse/CW and technical competence mutually exclusive in the extreme. You would have to undo over a decade's worth of Fidonet/Usenet debate on this topic to convince me otherwise. I have read and authored the equivalent of dozens of full-length novels' worth of messages that relate to this topic, and can call myself an expert on the subject without any fear of exaggeration. This is one place where you can't pull the wool over my eyes with one of your classically specious examples.

The link between technical incompetence and Morse code skill is the very foundation of every argument that has ever been made against the

pre-Restructuring status quo in code testing. This is the truth, the only truth, and the only reality. You cannot ever escape this reality in a feeble attempt to justify what has been done to permanently obviate any future growth in the use of the Morse/CW mode. Such use will indeed decrease, and make it easy to expand the amount of amateur HF spectrum authorized to voice modes. Deny this if you will, but it is the truth.

I'm one of those influentual folks, and getting something like this on the
City Council agenda isn't all that hard.

The FCC has already busted several pirate FM broadcasters who were
interfering with aircraft communications. Just bringing up the possbility
of it happening will cause them to squirm. Look at all the debate over RF
exposure...and not one shred of evidence that there is any health risk at
all.

Antenna regulations in both our city and our county allow only TV antennas,
and even those have restrictions. Anything that transmits a signal,

regardless of height, is regulated. I was able to convice the local town fathers to specifically allow mobile antennas, since doing otherwise would restrict TV news coverage, and since this was the town where Polly Klass was kidnapped from, they made the exemption. Everything else is regulated.

>
> FCC yes, others NO, as Phil correctly stated.

If the city has passed the ordinance that HR 2364 provides for, and mom and pop are transmitting with illegal equipment, they can bust 'em. Even if it requires "stings" to get it done.

"Every argument that has ever been made"? Larry, if that were a true/false statement, any professional testing expert would tell you that it is prima facie false just because of the wording which allows absolutely no exceptions.

In fact, my argument is that if the med/high speed Morse code requirements had been maintained, the population of the ARS would become too low to sustain the ARS emergency communications function. Nothing said about technical incompetence at all.

All you have to do is look above at what I had to do to earn the $100.
You said if I could show you where I state or implied any division between
one group of laws and another, You will give me $100. You did NOT specify
which posting it had to be. I presented the posting where I satisfied the
necessary condition. Now you refuse to honor your word.

Why do you try to hold me to a higher standard than you hold yourself to?
You forgot to specify which posting. I forgot to specify which law. What's
the difference? Heads you win, tails I lose?

> Then why were you stopping to buy a beer?

I wasn't stopping to buy beer. I was stopping to buy milk and Sprite.
I just wanted some beer for later and this was the last stop before
arriving at my daughter's apartment.

I don't think that is true, Hans. For instance, the state of Texas
couldn't outlaw amateur radio operators because the feds have
jurisdiction.

Don't be facetious, Bill. Of course that means something to me.
But it does not apply in this case. According to FCC regulations, a
CB radio operator must submit to an inspection of his station.
Failure to do so can result in the loss of all operating privileges
and a serious fine. In other words, if the operator doesn't comply
with an inspection request, the local officer simply files a report to
the FCC and the FCC then takes action to shut that operator down
permanently (not to ignore any fine, written into the local law, the
operator may face for failure to comply).

> The police go through a 40 hour training
> class just to become qualified on using
> speed enforcement radar. Given the 100s
> of different CB radios, just how much
> training do you think it would take to
> satisfy a judge that the cop knew
> anything, much less enough to qualify as
> an expert in court.

First, not a single officer in my county has went through a 40 hour
training program to learn to operate an radar (I asked), yet not a
single conviction involving a radar has ever been overturned. Second,
a cop never has to qualify as an "expert" in court. All he is ever
required to do is prove sufficient knowledge to do his job (and even
that is not necessary if it cannot be proven he did his job
incorrectly). If an "expert" is required, that "expert" is usually
obtained from outside law enforcement circles.

> Ditto my last comment above. Also, that
> electronics expert gets paid $$$ to testify.
> How many towns want to take on that cost?

The cost of obtaining an "expert" will be covered by any fines
imposed. It happens all the time, Bill.

> Your statement is at direct odds with your other
> comments above.

How so? What specialized skills will be required to look at a
sticker on the side of a radio? And only minimal skills are required
to hook a power meter to a radio (CB'ers do it all the time with no training).

> How does the local cop know the difference?
> Are you, therefore, saying anyone with a ham license

> his house he just shows them his ham ticket and
> off they go?

According to HR-2346 (or now 47 U.S.C. 302a, as amended), yes. If a
license is shown, the cop has to walk away. However, that does not
preclude any enforcement effort by the FCC. And I'm sure the FCC will
take special notice of that licensed operator after a report is filed
by a local cop (assuming the cop goes through the effort of contacting
the FCC).

> I truly wonder how many towns have acted at all

My point was/still is that Carl bellows his opposition to every aspect of
the ARS..rag chewing..dx'ing..cw and of course those are "his" opinions
and then wonders of wonders, the exact same "opinion" almost verbatim
appears before the FCC and of course, it's a group (baaaaaaa) consensus.

> > unnecessary (arbitrary), but was the action capricious?
>
> Actually, it's not arbitrary nor capricious as long as
> the U.S. remains a party to the international treaty that requires it.

At one time in the past Morse code exams were
not "arbitrary and capricious", i.e. when CW was
the only means of radio communication.
As technology changed the justification for
Morse code exams fails. ITU rule S25.5 does not
specify any speed requirement, and therefore
does not justify the 13 & 20 wpm exams, when
5 wpm exam satisfy the requirement.
That is why the FCC could waived the 13 & 20 wpm
exams in its' 1990 Medical Waiver Decision.

The USA also has the option, of taking exception
to ITU rule S25.6 in its Final Acts for WRC 2003,
should the rule not be deleted.

> Once the treaty gets Morse code removed, then you're
> a step closer - but should the FCC retain the requirement
> (even for one day beyond), you can't show that it's "arbitrary"
> because it was historically required.

While is some cases historical arguments can
be used to protect individuals from certain
agency actions and rules, the arguments
does not protect agency laws and actions
that are "arbitrary and capricious". Else how
would a court ever hold an agency rule
unlawful.

Nice dodge, Cecil.

However, the fact remains that you didn't specify anything until I called you down on your original comment. Changing the rules halfway through a debate may only be done by mutual consent. As this is the only way that you can salvage any of your original argument, and I don't give you that out, you lose.

Thank you for playing.

Nice dodge, Keith. You are guilty of exactly the same thing as I so if
I lose, you owe me $100. You didn't specify which posting your $100 bet
was based on. If you insist on holding my feet to the fire for not
specifying something, then if you are a man of your word, you owe me
the $100. I'm not going to allow you to hold me to a higher standard
than you hold yourself.

Wewll, as Bill said recently," Times change. positions change". We
already knew that and therefore have gooe reason to believe there is
more to NCI's agenda than has been admitted. Of course it's not
necessary that all members of NCI be on the same page, but a few key
'leaders"....

No, I know enough to know that you can't advance the timing, nor should you have any need to. The computer takes care of that and does a much better job than any previous scheme. That's one reason why my 2000 GMC full size pickup with a big V8 engine gets as good mileage as the 90 model with the 6 cyl. I bought 11 years ago. Why don't YOU know all this if you're so leading-edge? We aren't talking auto engineering, but rather ham radio as it is, not as it is in your dreams.

It'll take more than your word to convince anyone here. I've heard it countless times--"I've spent hours and hours trying to learn the code and I just can't do it". But what they really did was spend hours and hours saying they just couldn't do it.

Henry Ford is credited with "Think you can, think you can't, either way you're right".

No sane person wants a mode war, and if you don't think one would
result from elimination of band segments you're nuts. FCC believes it
and they don't want to have to referee it. So it will be left alone.

If this sums up your position wrt amateur radio testing, I think I will let it stand on its own.

I did a search of FCC regs and didn't find the word "lazy" or any derivative. If you want to effect a rules change, I encourage you to file a petition for rulemaking with the FCC that includes the word "lazy" as a proposed regulation.

Or do you not think your idea of what the amateur radio service could withstand the test of law?

Message-ID: <nj36et0kqc37jag0i870n5rq2rtd045f3t@4ax.com>
Source record: 7730

In my (not so) humble opinion, the parallel between the "hobby" of private aircraft and private radio can give us much insight into the old question of the relevance of the code.

If you have a person with a certificate that says "private pilot", you know that the person is technically competent to fly an aircraft. However, you have no idea what "aircraft" they are qualified in until you read a bit further. After the "private pilot", they can have such qualifiers as "airplane", "glider", "hot air balloon", "helicopter", "gyroplane" and a few others. Just because mine says "airplane" and yours says "glider" doesn't make me any more or less a pilot than you. The fact that I studied about engines and you studied about towplanes is only a difference in the type of skill, not the competence of the person to fly what they are rated for.

So perhaps we need one certificate "amateur radio operator" with qualifiers after the first line. You want to study code and pass the test that permits you into that part of the band, go for it. If I want to do ATV and get those privileges, I'll do it. Whatever rots your socks.

There are core subjects that we both need to know. How to tune up a rig transcends the type of operation. Most of the regulations are much the same for both of us, yet some of the regs pertain to how you do your keying and some of them only pertain to how I transmit my video. But don't ask me to acquire a skill for which I have no use.

I do not in any way debate your right to do the brass, but I fail to see how this skill that I'll never use should be part of my training. Quite frankly, if you gave me a big propane bottle and a huge gas bag right now, I'd be at a loss as to what to do with it and honestly couldn't care less how it all works. Same for CW. I'm 57 now, and the last time I touched a key I still couldn't legally buy a drink. I haven't felt the loss.

No resemblance. Nonsense Phil. See Black's Law Dictionary. To wit:

Arbitrary and capricious. Characterization of a decision or action taken by an administration agency or inferior court meaning willful and unreasonable action without consideration or in disregard of facts or law or without determining principle. Elwood Investors Co v. Behme, 79 Misc.2d 910, 361 N.Y.S2d 488, 492. See Rational basis test.

Rational basis test. Under this test, an appellate court will not second-guess the legislature as to the wisdom or rationality of a particular statute if there is a rational basis for its enactment, and if the challenged law bears a reasonable relationship to the attainment of some legitimate government objective. The same test may be applied when a court is reviewing a decision of an administrative body because of the expertise of such body. It has been said that the protection of the public from unwise or improvident statute is to be found at the voting polls or by referendum, not court. Munn v. Illinois, 94 U.S. 113, 134, 24 L.Ed.77. This test does not apply, of course, if the statute or decision is unconstitutional.

As a standard of review for statutory enactments challenged on equal protection grounds, this test requires that classifications created by a state must be reasonable, not arbitrary, and must rest on some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike. Aladdin's Castle, Inc. v. City of Mesquite, C.A.Tex., 630 F.2d 1029, 1039.

Also see:

Orion Communication v. FCC, District of Columbia Circuit, #96-1430, (12/19/1997)
We reverse a Commission decision granting or denying a broadcast license only if that decision is "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law. 5 USC 706(2)(A); See DirectTV, Inc.

v. FCC, 110 F3d 816. 826 (D.C. Cir 1997). The Commission's decisions in this case clearly fail to meet even this deferential standard. The Commission recognized that it had the 'discretion to maintain [Orion's} existing service upon ... remand ... in order to avoid disruption of service to the public." See 11 FCC Rcd 19589 91996). In nonetheless rescinding Orion's authority to provide such service, the Commission abused its discretion and acted arbitrarily and capriciously in the following respects:
.....

> I've instructed you in this several times in the past and I see no need
> to rehash it.

Phil, I am not your student. I think you letting your years as FCC employee and volunteer ARRL legal advisor, bias your opinion.

> If you can't apply the terms properly, don't.

I applied the terms correctly, you just don't like the conclusion. But you not judge, its the FCC decision, and so far they do not feel that the Morse code exam serves any regulator purpose.

> Stop trying

No. First amendment, U. S. Constitution, (1791)

> to play guardhouse lawyer.

Of course I am not playing guardhouse lawyer, that is just opinion. I appreciate if you would stop referring to as a "guard house lawyer" or any other similar term.

Despite the meaning of "arbitrary and capricious", FCC rule 4CFR 87.503(a) is not in conformity with 5 U.S.C. 706, but is saved by and only by ITU rule S25.5. And, that is also questionalable legal position.

Federal subsidization of the CW mode will be an increasing administrative burden for the FCC.

Good point. The FAA has found good reasons to issue endorsements
for various types of aircraft. The FCC has never found any good reason
to issue endorsements for any operational mode other than Morse code
proficiency. In the 1999 License Restructuring decision, the FCC said
that Morse code exams served no regulatory purpose. The Morse code
test is not in conformity with 5 U.S.C. 706, the FCC will simple delete
47 CFR 97.503(a) after ITU rule S25.5 is deleted in 2003.

A better solution would be for ARRL and others to offer specific courses
in various radio amateur subjects with certificates of completions.
No specific regulation is necessary.

>> Home Phone Networking

> QRM, QRM, QRM. Sanctioned by our very own FCC.

These devices are sanctioned under the same rules that permit all sorts of other digital devices. The regulations are about 20 years old. What NPRM are you referring to?

Certainly, most of us have. And I don't care about the "rights" of queers--they have same rights as the rest of us.

When I was in college, I worked part-time at a well-known automotive parts manufacturer as a forklift driver. Most of the guys in that department were college kids. I noticed that whenever I visited the mens' room, the boss would usually come in as well. At first, I just thought he was checking to see I didn't tarry too long. But it happened enough that I mentioned it to one of my co-workers. He told me he was doing the same thing when ANY young male went to the john. So I started to use the private stalls even when just taking a wizz. So did all the other guys, now believing this guy was one of them "funny boys" that liked to peep. I eventually left this temporary job in favor of one more suitable to my school schedule. I never knew for "sure" this boss was queer, but I learned later that he was FIRED after being caught on the roof of the plant groping a kid he hemmed in a corner. He had made the boy go up there on the pretense of helping him repair a loose vent. I also learned that he had given EVERY college male that "hid" from him in the stalls, a bad work record so that none of us could get another job with the company.

....and I'm supposed to be "TOLERANT" of these people?

Nuts is believing that "hoards of freebanders" were going to invade the
ARS after April 15, 2000. How do you know your "mode war" is not just
another one of your many delusions? Do foreign hams with no legal mode
separation have mode wars?

Hitler was a heterosexual. Does that make you hate heterosexuals?
Using terms like "these people" because of the actions of one
person is collectivism, akin to sexism and racism. Why can't we
just judge individuals for their good or bad actions?

Good idea.

There current three classes of license being issued:
Technician (T), General (G), and Extra (E).
If FCC the were to make code an endorsement; say
every 5 wpm would be a plus endorsement.

Existing Extras with 20wpm code endorsement would be E++++.
New Extras with 5wpm endorsement would be E+
Old Advanced with 13wpm endorsement would be A+++ (rounded up).
Old Generals with 13wpm endorsement would be G+++ (rounded up).
New General with 5wpm endorsement would be G+.
Old Technical Plus would be T+.
Old Novice would be N+
Old Technician depend on their previous code test would be either T or T+.

A person could then pass the Extra test with a code test and be E.

The ARRL could offer code test in 5wpm increments. So hotshot
radiotelegraph
operator who passed 40 wpm could be E++++++++. the ARRL
could handout start for each 5wpm increment. Then we have eight star
Extras.

The ARRL already offers code-proficiency certificates. Unless your idea is tied somehow to legitimate licensing concerns and operating priveleges, I do not think it to be a good one. The ARRL code-proficiency certificates do not affect anyone's operating priveleges.

Changed sides, Larry? :-)

My town has a height limit of 8' foot off the roof and the tallest rooftop is 35' in our town or 8' off the ground. Otherwise you need a variance for anything else, there are at least 2 cell towers at 150' tall in town, and a State Police installation, one cell site is less than 200 feet from my home,directly across the street where i walk out of the house every morning looking at something I cannot have.Which is a decent antenna system.

Were those pirates doing CB? That is the ONLY thing this
legislation alows locals to go after. If the pirate is
illegal in AIR VHF frequencies, the CB legislation is
of no help there.

Please tell us what city you live in. The locals
have no jurisdiction over your right to transmit and to be
reasonably accomodated regarding antennas and towers.
Translation, the locals can NOT prohibit you from
operating.

> I was able to convice the local town
>fathers to specifically allow mobile antennas,

Are you saying that the locals wanted to ban mobile
antennas from vehicles in their jurisdiction?

If you are saying they allow mobile TYPE antennas installed
on structures, well that certainly allows just about any verticle
that can be fixed to an automobile.

>since doing otherwise would
>restrict TV news coverage, and since this was the town where Polly Klass was
>kidnapped from, they made the exemption. Everything else is regulated.

Sounds like just a great place to live, big brother aproving
everythning. Tell me, what would they say about a dipole strung in
my attic?

That is your "compete and insightful" summary of the present impact of UWB on Amateur Radio?

>> Spread spectrum

> We can't begin to agree on what the consequences of use of SS are
> on HF, and it'll be years before that question is adequately addressed.

I think "complete and insightful" needs to be accurate, Dick. SS is not permitted on HF.

>Same as above. In ham radio we don't have any, and it doesn't appear
>likely we will in the foreeable future. What would be the point?

Do you think that "what would be the point" is really a summary of the potential use of digital voice in amateur radio?

>> Synthetic aperture radar

>Not familar with this one.

It was and may still be an international threat to the amateur use of the 70 cm band.

>> Periodic emitters

> More "help" from Friendly Cousin Charlie. Live with it, I guess.

I agree that we can probably live with the present rules wrt periodic emitters.

>> IMHO, anyone who thinks he has a complete and insightful understanding of
>> all of the issues surrounding Amateur Radio is egomaniacal beyond belief. I
>> realize you think you are superior, Larry, but you really should draw the line
>> somewhere.

> A long-experienced Extra class ham is not a superior performer to the
>many beginners in ham radio?

Where did that come from? My comment was that Larry's choice of words implied that he knew everything there is to know about Amateur Radio. Do you really believe that I was saying that a long-experienced Extra is not superior to a beginning ham, or were you making that up to try to make a point?

> What is this, becoming a Communist hobby/League?

If you want to make this a communist conspriracy, go ahead, but it really does detract from your credibility.

> Hey, we're paying you to be the expert, Ed, and to handle such stuff
>for us. If no new hams need to be even minimally technically competent
>what's your problem?

I disagree with you if you believe that new hams do not need to be technically competent.

>I know of no better reason to pay my membership dues than to hire you
>and others to keep ham radio afloat, If you guys can't get it done,
>well, either we'll have to find someone better at it or give it up.

That is my reason for paying my membership dues, too, Dick. But I have never, nor can I, do it alone. ARRL's work in RFI, spectrum protection and a number of other areas is not done by a handful of staff in Newington, CT; there are a number of volunteers who are a lot smarter than I am that offer their help on a regular basis.

> And again, you have done very well at holding down your end of things.
>I still think that Newington could have done a lot better job of liason
>with the FCC in the past couple decades. They need to know us on a first
>name basis, and that first name should not be Squiggy.

I agree that there is always room for improvement, but I would imagine that my name, Jim Haynie, Paul Rinaldo and Chris Imlay would be pretty well known in FCC circles. I would also bet a lobster dinner that if you say the name "Squiggy" to the FCC, that not one FCC staffer will have any idea what you are talking about. If you mean Carl Stevenson, chances are real good that those he met in Washington, both as part of his ex parte presentation and as part of his professional contact with the FCC know him well, too.

Of course, you may not have been being serious about the name Squiggy and intended it only as a gratuitous insult.

So all Mr. Bootlegger does is set up a plain vanilla 4 watt station
in his house and never shows the Locals that KW amp
and the other equipment he has in the basement.
Allowing an inspection doesn't mandate a complete search of
the entire house.

Me thinks in the scope of radio enforcement, any half baked
attorney would clean the clock of a local cop who couldn't

show the required knowledge. As to cops in your state
being "trained" on radar use. I would doubt sincerly that
there isn't some required certification required. NY has a 40
hour training certification.

>> Ditto my last comment above. Also, that

In the few instances where I have interacted with town officials wrt RFI and local regulation, they readily accepted the premise that they did not have jurisdiction.

Of course, what added the exclamation on the decision was the statement by the ham that over and above what the FCC regulations required, he wanted to be a good neighbor and help his neighbors find solutions to the RFI problems.

I think most of us are at least resigned to seeing it disappear as a
testing criterion but you seem to want to outlaw it entirely. Sounds like
an emotional problem for the chaplain.

Your problem is simple. If you sold the idea to whoever mattered in the
next 38 seconds it would still be at least five years until it could be
done in as a testing criterion. And selling the h.f. amateur community
serves no purpose whatsoever.

It would seem that downloading Morse Academy http://ah0a.org and devoting
the time you are now spending on a meaningless activity trap to a fairly
trivial exercise would be a somewhat more adult approach.

Bureaucracies move slowly. Time to get over it.

Cecil:

First of all, I think you mean the "slow/medium" speed Morse code
testing requirments, because 20 WPM is NOT "high speed" code by
any stretch of the imagination. The 13 WPM level was intended to
demonstrate practical, basic, low-speed code recognition which can
easily be copied by non-proficient operators. The 20 WPM test was
intended to demonstrate the ability to handle CW traffic at a
reasonably productive rate of speed. However, "professional" CW
operators in the military, maritime, and commercial services usually
BEGAN at 25 WPM and worked their way UP from there!

Now, prior to 1991, when the No-Code Technician license was
instituted, the United States had around a half-million licensed radio
amateurs. In 1983, there was around 420,000. How many hams
does the world need? How big do we need to be in order to provide
adequate emergency backup communications capability? Keep in
mind, that with the way personal communications capability is
exploding in the commercial sector, the role hams play in
emergencies is being shoved further into the background. In fact,
the only reason why a lot of emergency operations are being
conducted by hams at all is because a lot of them are forcing their
participation in places where it is neither needed or wanted. The
opportunities for radio amateurs to provide meaningful "emergency"
communications services these days are shrinking, while, at the same
time, reduced licensing standards are creating larger numbers of
over-eager wannabe "ham heroes" who may, regretably, create their
own "opportunities" to save the day.

We are at the point where we are just as much of a nuisance as
anyone's potential salvation. And the sad part is that the HF hams
we're creating these days lack the knowledge, skill, and
communications proficiency required to be a truly valuable asset
under the kind of austere conditions which truly demonstrate our
value to society.

>aircraft and private radio can give us much insight into the old question
>of the relevance of the code.

>So perhaps we need one certificate "amateur radio operator" with
>qualifiers after the first line.

The notion of a "Basic" amateur radio license with "endorsements" after passing tests for various modes is not an idea that should be tossed aside lightly...

..it should be hurled aside with great force!

After all is said and done, the one underlying difference between the amateur radio service and the other personal radio services (CB, FRS, etc.) is the fact that we are licensed to build our own station and put it on the air. We alone are licensed to build a 1.5KW transmitter and put it on the air, without any "inspection" of that transmitter by the FCC before we stroke up on our favorite band.

This "permission to experiment", unique to our hobby both in the equipment *and* the modes we use, is what sets us apart. Restricting our operation and experimentation to only those modes or equipment types we have 'endorsements' for, such as is done in aviation, would be the end of the Amateur Radio Service.

Since we couldn't tinker with anything new until we had studied and tested for the endorsement, experimentation and tinkering would come to an immediate halt. There is little enough of it now, and the idea of qualifying for endorsements before we could tinker with a new mode or technology would end experimentation within the framework of amateur radio for all time.

The only legimimate function of testing in the context of amateur radio licensing is to ensure that the licensee has a basic familiarity of technical concepts, such that they can ensure that their experimenting and operation does not trash the electromatic spectrum for other users, and that they stay within the bands allocated to them.

I firmly believe that the amateur rules ought be simplified to:

97.1 You are required to pass a technical test to show that you understand how to build simple equipment which meets spectral purity specifications of .....blah, blah, blah. You will be

issued a callsign when you pass the test. Transmit your call sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna. Here are your bands. Stay inside of them.

97.3 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands. The government doesn't care what mode you use for any of this.

97.4 Play nice. Deliberate interference will cause your license to be immediately and permanently revoked.

/signed/ FCC

Subject: Morse Code
Date: Sunday, March 07, 1999 5:25 PM

What is wrong with everyone. Trying to flush the code requirements for the sake of simplifying the license requirements does not make sense. Morse, or CW is a mode of communications, and a dam good one. Communications is what Amateur Radio is all about, in fact Amateur Radio provides the best communications known. Can you imagine having a the best in communications known and not knowing the Morse Code?

When all else fails, and its a dam good bet were all going to see that happen, its Morse Code that is going get through if its still around.

What good is it going to do to have 1 million Hams that cant do anything but punch a keyboard on a computer or talk into a microphone when all they have is two wires to scratch together to send a signal.

I have even found using a flash light a means of communications using Morse Code, but if the guy on the other end does not know what the on and off sequences mean, like Coast Guard, then its a waist of time.

Same thing with the classes of licenses. . . . What is all the fuss about? One class of license, Extra plus the 20 wpm is not asking too much.

If that seems to be difficult, I strongly recommend basket weaving or watching sports on TV like the rest of the morons.

From: J1aguiar <j1aguiar@aol.com>
Subject: ARRL is full of you know what
Date: Sunday, March 07, 1999 5:37 PM

All the ARRL is looking for is to increase the membership in order to increase the flow of bucks. Who is kidding who. Its all politics and money.

Smarten up. . . . Ham Radio is being sold down the river. If the ARRL had their way about it, licenses would be $10 each with a ARRL logo on it.

I would rather spend $100 to renew my license and have the FCC continue on doing things the way they did them once before.

Subject: SSB contest week end
Date: Monday, March 08, 1999 6:15 PM

Have you noticed that when the contests are running up on the phone band, SSB that is, its hard to find a CW signal down at the other end. What does that tell you.

I think everyone is on CW, mostly Extra Class, just listen to the calls and try looking the other calls in the book, 99% of the calls you hear on CW are Extra Class stations.

Tell me that CW is not the popular mode and I will tell you your full of it.

A half a century of CW and I can tell you there is more going on there than any other mode today.

The only reason the US Gov. tossed it out is because of man hours, Robots work cheap and they donï¿½t need time off.

The US is still training men for Morse Code, I wonder why ? Your dam right.

Anyone who is either to lazy or stupid that they cant learn the code should be patient because the ARRL is going to hand it to you in trade for your membership, ainï¿½t that the new trend today.

From: J1aguiar <j1aguiar@aol.com>
Subject: Fractured Fairy Tales
Date: Tuesday, March 09, 1999 8:17 AM

Why is ARRL playing Tinker Bell and changing the rules again. Novices and Technicians automatically becoming General Class Licensed Amateur Radio Operators.

What happened to Mother Goose and her incentive program?

Anyone who tells you that this plan is going to work is out of their mind.

We all know that anything that comes easy is never the same as something we have to work hard for. Nothing can be free.

The old saying, the fish rots from the head down.

Unless we all stand together by saying no to the ARRL and its proposals, the rotting will infect Amateur Radio.

One good way is to discontinue subscriptions to QST and the ARRL membership. Itï¿½s the only thing that is going to make the listen up, Money.

If your reading this, you should be able to send your message to ARRL letting them know that the knife is in hand and the rotted head is about to cut off.

Subject: Have You Noticed
Date: Wednesday, March 10, 1999 8:39 AM

Check the FCC listings on upgrades http://www. qrz. com/new_hams. html?

You will notice all those rushing to get the Tech and Novice. Why not, its going to be an easy way into General Class as soon as the ARRL proposal goes into law. If that ainï¿½t cheating.

This is ARRL's idea of incentive licensing just to increase membership?

This is what happens when a magazine publishing company takes over.

What would happen if Private Pilot, or Aviation Magazine was to propose a private pilot licensing restructuring plans to the FAA.

If you have been reading, there is one fellow at the FCC now who is working hard to clear up this mess of jamming and foul mouth activities. What do you think he is going to be up against when this new proposal goes into law?

All I am saying is, if you want to get into Amateur Radio, do it the right way and earn it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Seven Hundred Thousand Chickens
Date: Thursday, March 11, 1999 9:59 AM

Have you ever seen one of them chicken commercials on TV. Yea, they remind me of the Amateur Radio population. Like them chickens, us Hams are all going to go the same way as them chickens. ARRL is taking us to market, but not till they pull our necks and defeather us. Lets not wait for this one to hatch. Let them chicken pluckers at ARRL know that we are not going to stand for it.

Does ARRL have anyone by the name of Purdue on the Directors list?

From: J1aguiar <j1aguiar@aol.com>
Subject: Where is the Incentive?
Date: Thursday, March 11, 1999 3:57 PM

If the Novices and Technician Class operators are automatically upgraded to General Class I want to know where the incentive plan went.

Is this some kind of joke, or are they really serious? What is the reasoning behind this sort of plan?

Has the ARRL changed its policy on incentive licensing?

I see a lot of new comers just sitting back and waiting for the up grade. The other day I was listening to a conversation on two meters. One fellow who was a Technican had just gone out and purchased a new transciever for the HF bands so that he will be ready for the freebie upgrade. In fact I heard him saying that he has already been on the air with the radio to see if it really worked.

Where is the ARRL taking Amateur Radio in the Y2K. I sure would like to be more supportive and lend a helping hand to all those who are willing, but this sure takes the wind out of me.

In my time I have helped many new youngsters into Ham Radio, and each and everyone of them learned the code and studied. Everyone today has upgraded to the top Class of license, and I may add all have become expert CW operators.

Today I dont see any takers or interest in Amateur Radio. Most of the people today who are seeking an Amateur Radio license are unwilling to learn what radio is all about. It has something to do with computers, and for some reason it makes them feel as though a need to become an Amateur Radio Operator is needed. Some where along the line radio and computers have been linked together and that is a misconception that all to many of us today don ï¿½t understand, especially me.

From: J1aguiar <j1aguiar@aol.com>
Subject: Fox in the Hen House
Date: Friday, March 12, 1999 10:21 AM

The same old story we all heard before about the fox in the hen house. Well Amateur Radio reminds me of that same story.

Living on farm I have learned to listen to the hens when they make a ruckus and start cackling up a storm.

Like Amateur Radio there is a lot of cackleing going on and it reminds me of the fox in the hen house.

We all know that the fox aint in there to help the hens. As a result the hen population is reduced and we all know what that leads to in the end.

The answer is, you either get rid of the fox or reinforce the hen house to keep the him and other varmints out.

From: J1aguiar <j1aguiar@aol.com>
Subject: I dont believe it
Date: Saturday, March 13, 1999 5:19 PM

I donï¿½t believe that increasing the ham radio population is going to solve any survival problems in the future. In the past I have always seen that by letting the chips fall where they may was always the best way to find out where its going.

Over control or forceing is a destructive method of tweaking for the future.

By maintainint the high standards of Amateur Radio will indeed make the hobby more attractive. Those who are seeking lower standards are the ones who will destroy Amateur Radio.

I strongly recommend the single class of license of the Extra Class, and a non renewable one or two year term Novice for the entry level.

It wont take long before all those who have nothing to offer and are just waiting to be automatically up graded to General Class will realize that Amateur Radio is something that requires one to buckle down and learn something instead of complaining.

Anything worth having is worth working for. If it comes free it has no value.

From: J1aguiar <j1aguiar@aol.com>
Subject: Be Really Smart
Date: Tuesday, March 16, 1999 8:04 AM

What I cant understand is why some of those who reply to these postings are the same ones guilty of what the article is about.

Those who are waiting for the other shoe to drop, as in the automatic upgrade to General Class.

Tech and Novice classes who read this with great antisapation. Instead of waisting time knocking the system here and being so smart with their snide remarks, why dont they simply go out and up grade now instead of waiting for a free ride.

So all you big mouths, before you get smart here, try getting smarter by doing what it takes to earn your up grade.

One thing the ARRL has done right and that is the incentive. Actually it is not new as the incentive program has been around for some time long before ARRL suggested it.

The one big mistake is going to allow automatic upgrades for Novice and Tech.

If your a Novice or Tech now the class privilages should remain the same as they are now and when the license term expires it simply can not be renewed.

I dont see any hardship in having to take an exam for the upgrade. All I see is a give away program that is in total contrast to the incentive system.

From: J1aguiar <j1aguiar@aol.com>
Subject: Good Work
Date: Tuesday, March 16, 1999 8:09 AM

Congratulations to Mr. Hollingsworth for the work he is doing. I must admit that I have not really heard any of the jamming or foul lanquage on the bands my self, but I have heard others complain.

From: J1aguiar <j1aguiar@aol.com>
Subject: ARRL
Date: Thursday, March 18, 1999 11:39 AM

I hope that in the end tht the ARRL and FCC can see its way clear to resolve the restructuring program so that those who are now Novice or Technician Classe will not be easily upgraded. After all upgradeing by completing what ever elements are needed for the General Class is no hardship.

Simply put. if your a Novice or Tech. Now is the time to upgrade before your old licence term expires. You wont be sorry.

From: J1aguiar <j1aguiar@aol.com>
Subject: Read QST
Date: Thursday, March 18, 1999 11:45 AM

No Question, reading QST is one of the best ways to stay informed as to what is happening in Amateur Radio today. Reading this April's issue was like a shot in the arm. Keep up the good work ARRL and Mr. Hollingsworth, its what I have been waiting to hear.

From: J1aguiar <j1aguiar@aol.com>
Subject: Re: I dont believe it
Date: Friday, March 19, 1999 11:37 AM

Here again. Another fellow who holds a Tech Class license. Time and time again its the same ones who complain and talk about all the reasons why the code should be either reduced to a feable 5 wpm or eliminated.

If the code remains the same and it keeps people like this from ever becoming real Amateur Radio Operators , then I would have to say why lower our standards for the few who can not meet them.

Once again, learning the code and being able to send and recieve it at 13 or 20 wpm is no big deal or for sure no hardship, Unless ofcourse one is unwilling to learn something that he will never regret.

This crappola about the US Government no longer using the Morse Code and that is why Amateur Radio no longer needs to have it is nothing more than a lot of crap. Give me a break.

From: J1aguiar <j1aguiar@aol.com>
Subject: NO CODE?
Date: Friday, March 19, 1999 12:32 PM

Since this no code thing has started I hear more and more people using two meters as a cheap way of havng a cell phone.

Husband and wife talking about what is for dinner, or who is picking up the kids after the basket ball game.

Even imigrants who barely speak english never the less read it are using ham radio for the same purpose.

No code is turning amateur radio into another CB form of communications. The only reason they support the local radio clubs is to be able to use the phone patch. They have not interest in amateur radio what so ever.

If allowing to lower the standards of amateur radio, it wont be long before this same type of activity will become popular on the HF frequencies as well.

During the past 44 years I have seen many changes in amateur radio, some good and some not so good, but if we continue to lower the standards it wont be long when we have no amateur radio at all.

From: J1aguiar <j1aguiar@aol.com>
Subject: Minority
Date: Friday, March 19, 1999 6:58 PM

Those who seek to have the code exams abandoned are a minority. The majority of Amateur Radio operators today have already passed their code test in order to upgrade.

Amateur Radio is not going to be loosing much if the minority groups who are either to stupid or so dam lazy that they cant pass a simple test should be left behind.

From: J1aguiar <j1aguiar@aol.com>
Subject: Eliminate Reading
Date: Saturday, March 20, 1999 8:41 AM

They should eliminate the requirments for reading or eye exams for automobile drivers licenses. No one today needs to know how to read, Infact most of the youngsters today, not to mention a lot of adults,who never took the time to learn. What else can we think of that we dont really need to know ?

From: J1aguiar <j1aguiar@aol.com>

Subject: Hemorrhoids, or possible spinal problems
Date: Sunday, March 21, 1999 4:53 PM

Sitting in front of a computer for as long as it takes to write hundred of postings on this news group making excuses as why the code is no longer required has got to be hazardous to your health. At least you don't have to worry about brain tumors, because you were not in a high RF environment.

From: J1aguiar <j1aguiar@aol.com>
Subject: Memorizing
Date: Monday, March 22, 1999 3:34 PM

Reading carefully in any of the ARRL license manuals it will advise you to read the text and study all aspects of it carefully.

Nothing can be worse than going to take an exam knowing that all you have to rely on is the answers that you worked so hard to remember. If your looking for a good way to fail and get so discorraged as to not want to try again,go ahead and waist your time memorizing the questions.

The math level for the Amateur Radio exams are at grade school level.The hardest part of the Amateur exams seem to be with the learning of Morse Code.

Its beyond me why that should be so difficult as compared to learning the text because learning the Code is simply memorizing. Its so dam easy that I have to wonder what all the fuss is all about.

Take your exams on at a time, dont rush. Work your way to Extra Class.
If you give your self a date, you can have it done in three exam sessions, or three months. You can do it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Making it easy with ARRL
Date: Monday, March 22, 1999 3:45 PM

All one has to do is read QST. They have an excellent monthly articles. This months issue April page 61, The Doctor Is In, is an excellent article dealing with just about every question that is in the Amateur Radio License Manuals.

They even have a quiz page to test you knowledge.

ARRL provides Code Practice live on all of the Amateur Radio frequencies to make it easy and convieniant to fit your personal schedule.

All it requires is a little effort on the part of the person who wants to get his or her Amateur Radio License.

Try it and you will soon be a happier person for it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Discrimination ?
Date: Monday, March 22, 1999 7:28 PM

I like these people who cry discrimination when it comes to learning the code. Discrimination would be if you were not allowed to take the code test like everyone else.

As I remember there was no one stopping anyone from taking the code test.

I dont know where you come from, but dont be afraid to take the code test, you wont be breaking any laws.

From: J1aguiar <j1aguiar@aol.com>
Subject: Cutbacks in Connecticut
Date: Tuesday, March 23, 1999 10:15 AM

Reading March 73 Amateur Radio Today on page 8 was somewhat disturnbing.

Cutbacks in Connecticut, ARRL who is supposingly cutting back the size of QST. Several areas of the magazine will be cut back;the space allotted for Section News will be reduced by 15%.

After exclaiming what all boils down to a financial melt down at the Leaque,it goes on to say that Mr. Rick Palm K1CE paints a grim picture of amateur radio as it faces the next century.

The artical goes on and I get the impression that because of the finacial well being and future of the ARRL it reflects the future of amateur radio.

Amateur Radio is no doubt loosing its crediblity as the requirments for licenses exams are being lowered in order to attract more into the hobby.

If amateur radio license exams continue on be adjusted to attract those who are, shall I say less than qualified,for the sole purpose increasing the numbers, then it will no doubt become nothing more than a meaningless hobby.

As it is now, the future of Amateur Radio is indeed being threatenened.

Remember the old Chinese proverb"The fish rots from the head down".

From: J1aguiar <j1aguiar@aol.com>
Subject: What I dont want is......
Date: Tuesday, March 23, 1999 1:13 PM

The day my amateur radio license says ARRL on it with the official logo on the it I will know for sure that were doomed.

Like I have said before here, I dont like to hear that the future of Amateur Radio is linked with the financial health of the ARRL. In fact I could care less what the future of ARRL is . But when a publication company, and that is all they are, jepordizes the wellbeing of Amatuer Radio to save its own skin, that I dont want.

I dont care how many people belong to the ARRL membership as long Amateur Radiio standards are not sacrificed in the process.

After all its supposed to be a nonprofit organization.Once again I say, The fish rots from the head down.

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code
Date: Tuesday, March 23, 1999 4:38 PM

Morse Code, or CW as we call it is as much a part of Amateur Radio today as it was in the beginning. Infact its even more so today than ever before.

If the code speeds are reduced it will only be another step in dumbing down the license requirments.

No one should even be allowed to become licensed as an Amateur Radio Operator unless they can qualifiy to meet todays code standards.

Anything less than 13 wpm is totally out of the question, and as for the Extra Class license, 20 wpm is not asking much to become what is known as the ultimate in Amateur Radio licenses.

If you dont have what it takes, no matter if its Aviation, Amateur Radio, or what ever,if one can not make the grade for what ever reason, then its high time to consider something like Bungee Jumping or Basket Ball, Oh yea, I think basket weaving is a code free activity.

One thing for sure, I hope Amateur Radio never reaches the same level as the latter group of activities.

From: J1aguiar <j1aguiar@aol.com>
Subject: Something For Nothing
Date: Friday, March 26, 1999 9:41 AM

No matter what, there is always someone who will complain about one thing or another.

Like amateur radio license exams.The code seems to be the big stumpling block at this point. Lets assume for the sake of argument there was no code, it was never invented. Then everyone would be looking for another scape goat excuse to make it easier. It goes on and on.

I am willing to bet that all those here who complain about the difficulties they are having to get a ham ticket are also having problems with just about everything in their life.

Think now for a moment, if your one of those who are having problems with this license thing,go to your magic mirror on the wall and ask the mirror who is the laziest one of them all. I have a feeling once you get your answer your going to have seven years bad luck.

Another question should be, is why do you want an amateur radio license. Now just dont take that question lightly, really give it some serious thought if you can. I bet after really thinking hard you really dont give a hoot about amateur radio or what its all about.

From: J1aguiar <j1aguiar@aol.com>
Subject: Ten Thousand Monkeys
Date: Friday, March 26, 1999 9:48 AM

I am willing to bet if ten thousand monkeys were to take a code exam none of them would ever pass it.

Must be something to do with bananas and swinging from tree to tree and being as happy as a monkey could be.

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code
Date: Friday, March 26, 1999 7:26 PM

I cant understand anyone saying that Morse Code is not being used. I think that the reason most people dont realize its being used is because they cant make the distinction between Morse Code and Teletype. Anyone who knows what Morse Code sounds like should not have any problem
finding the many commercial stations that are using it.

Just the other day, I heard a shore station exchanging information with a ship at sea using Morse Code. The ships radio operator was using a bug to send with and I might say he was going a lot faster than the required speed for any amateur radio exam.

Anyone who does SWL and knows the code certainly will agree that in todays communications Morse Code is still being used to a very large degree.

Our US Government uses it all the time, ofcourse not as much as they did at one time, but never the less they still train men to copy Morse Code today.

As for the Amateur Radio bands, there is more activity on CW than all the other modes combined. I am talking world wide CW by every country there is speaking any lanquage you can think of.

Amateurs from every country is using CW and doing it using the English lanquage. Ham radio operators from other countries are expert telegraphers and most capable of using CW at very high speeds with out any problem.

Its a lot easier to understand a Russian or Italian using Morse than it is on SSB.

The other thing is, a small simple low power transmit recieve station and a battery is all that is needed to send and recieve CW world wide, amazing.

Last but not least, it does not require a wide band width.and can be recieved with the simplest of recievers.

Anyone who has used QRP CW will tell you how flawless this system is.

In todays modern technology, satelite communiations uses CW because its the only mode that will get through.

From: J1aguiar <j1aguiar@aol.com>
Subject: Grind an Axe
Date: Saturday, March 27, 1999 8:49 AM

All these anti code groups have an axe to grind for one reason or another. They are either affiliated with with an organization or buisness that will benifit from increasing the amateur radio population.

During the past several months of reading the postings here I have noticed that the majority of those who protest the code as being apart of amateur radio exams are Tech Plus Class and even Advanced who find the code exam to be more than they care to think about.

Morse code is being looked apon as the sacrificial lamb in which these witch doctors of profit are proposing to send to its death for no other reason other than greed and personal interest.

From: J1aguiar <j1aguiar@aol.com>
Subject: State of the Art Personal communications
Date: Saturday, March 27, 1999 12:44 PM

I guess by now everyone has noticed that Yaseu , Icom and I think perhaps Kenwood is manufacturing a small hand held transciever that does not require any license to use.

I may also add, Citizens Band radio no longer requires any FCC permit and has two modes of operation to choose from, amplitude modulation and single side band .As far as I know there is no CW used on CB making it a more up dated class of operation.

Last buy not least,Internet offers world wide communications with no QRM, QRN,or poor band conditions to contend with, and once again no licenseing requirements.

Those considering state of the art communications should be encoraged to explore the many advantages of these new methods of communications.

In fact if telegraphy was available on any of these modes I would consider it my self,but like I said it is state of the art technology.

From: J1aguiar <j1aguiar@aol.com>
Subject: Cheating Prime Ribs
Date: Saturday, March 27, 1999 4:21 PM

Memorizing just the answers to any exam certainly is more work that actually studing and learning, not to mention all the benifits and self gratitude.

I suppose anything in life can be done by cheating, but the only one your cheating is your self.

Its like sitting down to a prime rib dinner and feeding the dog under the table your prime rib so that everyone will think you ate it all. You sure have to be some kind of stupid dim wit to pass up any thing that you would benifit from.

But we all know it does not work quite that way, cheaters usually eat more than their share of prime rib, especially if its free.

Subject: Noah
Date: Sunday, March 28, 1999 7:09 PM

I think when God was instructing Noah on how to build the Ark, it must have been on SSB or AM. I would even say FM, but it was not untill Armstrong came along that FM was invented. It was not untill a few thousand years later that Samual Morse came along with the code. So you see CW is the newer mode of communications if you want to consider. All you no coders better start getting with the latest technology.Dont let pumpkin rot prevent you from improving your state or the art skills.

From: J1aguiar <j1aguiar@aol.com>
Subject: FCC Proposal
Date: Monday, March 29, 1999 12:00 PM

FCC will maintain the current sending and recieving code tests as they now stand. The FCC has no intention of reducing or eliminating the code tests from Amateur Radio license exams.

As for the those who are now currently licensed as Novice and Technician, and Technician Plus. The Novice class will be eliminated as it stands no credit will be given towards upgrading as its an entry level license and is being completely eliminated.The Technician Class license holders will be allowed to continue using their current privilages until the expiration date, at which time will become void. Technicians have until the expiration date of their current license to upgrade by completing the required 13 word per minute code test,otherwise be required to retake the General Class.

Written Exams for Extra, Advanced,and General class license will be reviewed to include text to increase the knowlede of state of the art communications.

Also as part of the written exams, oral examinations by the V.E. examiner will required along with black board illustrations.

No Amateur Radio license shall be taken unless a complete course in Amateur Radio communications and practices consisting of no less than 100 hours is completed and edorsed by the instructing team of VEC instructors.

Apon reciept of a certicate of completing class, one will be given a certificate of completion that will allow amateur radio privilages on specified frequencies at any ARRL affiliated radio club. The clubs call letters will be used in conjuction with a slash N for identification.

Subject: The Real Reason For CB Radio
Date: Tuesday, March 30, 1999 11:32 AM

Does anyone know the real reason Citizens Band Radio was put into use? I wont go on to tell you why as no one would believe me anyway. You dont have to think to hard, and I would recomment a little research. All I can say is, thank God CB Radio was never used for its intended purpose.

However CB Radio should be included as part of every automobiles radio system. I know it was at one time as an option, but I do not know if that option is still available. The regular AM and FM radio would squelch when the CB radio was activated allowing one to have the choice of monitoring the CB radio during regular radio listening. I thought that was a nice touch.

I think this is what the majority of people are looking for today, a license free personal communications system.

I suppose now Cell Phones have taken over making communications possible from just about anyplace any time with the capability of direct contact to whom every your seeking to communicate with.

My automobile has long since been equipped with a personal cell phone in the event of an emergency, but I do still keep a small CW transciever tucked neating into the console for them long trips.

From: J1aguiar <j1aguiar@aol.com>
Subject: Amateur Radio means CW only
Date: Tuesday, March 30, 1999 2:15 PM

If they were to change all the rules by allowing anyone who simply wanted to play radio on the radio frequency spectrum could do so.

Amateur Radio would become a CW only thing.Anyone who thinks they would like to use CW could simply take the Amateur Radio license exam for it. All those who dont care for CW can simply be a Non Amateur, Communicators Class operator...

What is all the bull about with Amateur Radio, its only a title and nothing more.

The ARRL would have to change the wording on the front cover of QST to say Devoted Entirely To Communications. Does not have to be devoted to Amateur Radio.

The sooner Amateur Radio gets ARRL out of its hair the better. There drowning in a financial black hole and trying to suck Amateur Radio in with them.

Perhaps a Communications Magazine would help them survive the mess they got them selves into.

Then ARRL could lobby to steal CW frequencies from Amateur Radio for their new group..American Radio Relay Leaque does not have to mean Amateur Radio....

From: J1aguiar <j1aguiar@aol.com>
Subject: CW For Ever

Date: Tuesday, March 30, 1999 6:26 PM

Long live CW, and it will. Who would think in this day and age they are selling electronic keyers, paddles at astronomical rates.

Vibroplex is a good example. They are selling more telegraph,BUGS,keys as now as ever. And the thing about it all is hams are paying the price for them.

Listen to the CW bands, especially 40 meters where its not uncommon to hear the sound of a bug going along at 30 wpm, or a keyer or keyboard at speeds in excess of 50 or 60 wpm. And let me tell you, its all being copied by ear.

Listen to the traffic nets on CW.

There is more happening on CW than any other mode.

Last but not least, Amateur Radio means CW before it can mean anything else.

The day CW or Morse Code standards are lowered or removed from the licenseing exams will be the sadest day in the history of Amateur Radio.

Amateur Radio skills are dwindling at an alarming rate and if allowed to continue there will be nothing to be proud of.

During local radio club gatherings I notice its not like it once was. A less friendly atmosphere. A lack of interesting conversations. I have since given up belonging to a club because all one talks about is computer games, like my Star Wars or Rainbow Seven is terrific.

Subject: AM Flashlight
Date: Wednesday, March 31, 1999 9:15 AM

Many years ago my friend and I tried to modulate and detect audio from a flashlight, we even went on to using a more powerful spot light. At close range it worked perfectly and audio was transmitted on the light beam.However using the same light idea for sending Morse Code, a small pen light coudl easily send a signal clear across the harbor to his house. By mounting the lights in a fixed position and attaching a key and buzzer along with the lights we were able to use out communications set up as long as the fog did not roll in. Of course it did not take us long to learn how to build and use radio frequencies and then we could communicate from our bedrooms which were out of the line of sight.

I think superimposing an audio frequency of any kind on a sineusodial wave is total destruction to its purity....Joke.....

Subject: Very Well Said
Date: Friday, April 02, 1999 12:16 PM

The posting Re: The Term Amateur by Larry K3LT was well said. I must agree with him. Most of the postings here are simply off the wall with nothing more than dim witted reasons by a few people who either can not learn the code,or simply refuse to do so for what ever reason.

The sooner the ARRL puts the no code thing to bed the better off ham radio will be for the ARRL and for everyone who enjoys the hobby for what it really is.

From: J1aguiar <j1aguiar@aol.com>
Subject: I Remember When
Date: Friday, April 02, 1999 10:50 PM

I remember when the ARRL proposed the incentive licenseing plan to beef up amateur radio. Everyone was eyeing the radio frequency spectrum,and unless amateur radio could prove worthy of its name it could very well loose the right to continue using the frequencies that we now have. So the incentive licenses became a class act. Here we go again, only this time its 180 degrees in the opposite direction with eliminating classes, and lowering the standards for license exams. The no code thing is another farce, a gimmick directed at the weak minded that can not muster up enough brain power to cut the mustard. QST has been reduced to a low level reading that offers

nothing more than idiotic articals written primarily to attract new comers. I hate to say it, but 73's and Wayne Green, Never Say Die, is more fun to read, at least I can get a good laugh out of it.

From: J1aguiar <j1aguiar@aol.com>
Subject: The Cheaper it is, The Less its Wanted
Date: Sunday, April 04, 1999 11:23 AM

Seems as though everyone is lusting after the hard to get licenses that require a code test of 13 or 20 wpm. That is a good sign because it means that Amateur Radio is still wanted, its value still is high.

As the standards are lowered, more and more people will become hams who simply applied for and recieved a license with little effort on their part.

The value or worth is lessened, and fewer people will have the desire to obtain a license for Amateur Radio.

With even more time the entire Amateur Radio licenseing will be eliminated and everyone will be able to use Amateur Radio frequencies.

When the final end comes and the name Amateur Radio is forgotten, I am willing to bet that CW will still exsist and there will always be those special ones who will be heard through out the waist land of radio frequency space using the old mode of telegraphy.

Who knows. a whole new breed of Amateur Radio Operators may be born that are devoted entirly to the art of ancient telegraphy.

Go to any Yacht Club and meet the high caliber people who own sail boats. Its just not for everyone as it is now only for the upper class.

Subject: Club Station Operation for no Code Hams
Date: Saturday, April 10, 1999 9:30 AM

The only way I would consider the no code license would be if it could only be used at ARRL affiliated Amateur Radio Clubs only, and that a duly

licensed Amateur holding the class of license that is to be used be present during times of operation. Under these circumstances a no code license would provide a way for one to get aquainted with Amateur Radio without the pain. A basic examination of operating procedures could be left with the Clubs VE officials and a written permit could be issued for a one year term. I think this would open the doors more freely to those who want to try their hand at Amateur Radio but are not sure what its all about.

Subject: Hi Tech and Hams
Date: Sunday, April 11, 1999 9:57 AM

There is no reason why any ham worth his salt cant repair what he has today. I am not saying he has to build a Kenwood TS 950 SDX , but he should be able to repair anything that goes wrong with it. All that is needed is the basic tools and every ham should already have them in his tool box. The best tool is on your shoulders.

From: J1aguiar <j1aguiar@aol.com>
Subject: Actually ....
Date: Sunday, April 11, 1999 10:20 PM

The best proposal would be to shut down the amateur radio frequencies to all modes except CW. This would allow more room for CW to expand. Lets face it, if all you want to do is talk, get your self a cell phone or a no code two meter radio and go talk to someone. All I hear on the phone bands is nothing more than a lot of soap box conversations, I this and I that, yak yak yak about nothing what so ever.As for the digital crappola, and that is exactly what it is," CRAPPOLA", that is what computers are for.Last buy not least, the code tests should include one hundered percent copy on paper. This would leave one class of license of all top gun first class amateur radio operators. After all, amateur radio is telegraphy.

From: J1aguiar <j1aguiar@aol.com>
Subject: The Radio Kraze for Y2K
Date: Monday, April 12, 1999 11:47 AM

Seems as though there is some sort of Kraze going on for personal communications. Most of the people I hear on the VHF repeaters are mostly into hamming simply for personal reasons. Hello Honey, I am on my way home from.....what is for supper.....do you need anything at the store.....tell the kids I will pick them up in a few minutes.....Is this what ham radio is coming to ? What happened to the cell phone idea ? Pretty soon we will be hearing drug deals going down on the repeaters and all kinds of other non amateur radio activities. I even hear foreign imagrants speaking non english for hours.One fellow is in a bar talking to another driving a truck. Dont ask
to use the repeater either because they dont understand you. It wont be long before this sort of activity is taking place on the HF frequencies between the USA and the Azores Islands, Hey Manual, how is Juan doing with the cows.Thank goodness for CW, at least I wont hear that crap.

From: J1aguiar <j1aguiar@aol.com>
Subject: Hams Can Fix an Automobile
Date: Tuesday, April 13, 1999 10:27 AM

Every ham should know what is going on behind the front panel of his radio equipment. Fortythree years of amateur radio and I have built all my own equipment, not to mention antennas. Over the past years I have gone to commercially made ham equipment. Even though I have stopped building my own radio equipment, I do understand and can repair my own amateur radio station when needed. Most of the hams today are not capable of repairing their own radio equipment and I can perfectly understand that.The problem is they are not interested in the technology that goes into the ham equipment they own. I often wonder how anyone today is able to really understand the theory

that goes into the license exams. The younger people today seem to be a lot more on the ball than when I was a kid, yet when it comes to learning something they seem to look for the easy way out instead of being curious enough to want to learn. I hear the same excuses, like I own an automobile but I am not a mechanic,so should I need to know what makes my car work to have a license to drive. When I was a youngster no one said I had to be a mechanic either, but I learned how automobiles worked and repaired my own because I was interested in learning,most of all it was fun.

Subject: Sacrifice Amateur Radio
Date: Friday, April 16, 1999 11:03 AM

Seems as though there are a few,so called no code indivisuals who are willing to sacrifice amateur radio to suit their won personal and greedy habits of getting things for nothing. Lowering standards is certainly not a good choice.

On the air conversations reflects an entirely different view of what I read here on NG. I have yet to personally meet a ham who is in favor of lowering any standards. No one I know has ever had any difficulty in upgrading.

ARRL employees are agaist the lowering of standards but are keeping quiet for obvious reasons.

No code advocates have actually employed Exrta Class amateurs with two letter calls to play devils advocate by using their calls, as if to say I am an extra and I am for it, well anyone who has been around amateur radio for any lengh of time can see through that scheme.

To sacrifice for the sake of a few unworthy indivisuals is not only wrong, its totally against the grain of what America is all about.

From: J1aguiar <j1aguiar@aol.com>
Subject: How Old Is FM
Date: Friday, April 16, 1999 1:31 PM

ARMSTRONG, Edwin H. (1890-1954). The static-free circuits that make all radio and television broadcasting possible were invented by Edwin H. Armstrong, an American engineer. When he was only 21, he devised the regenerative, or feedback, circuit that not only brought in signals loud enough to be heard across a room but also generated wireless waves. Edwin Howard Armstrong was born in New York City on Dec. 18, 1890. As a child he was interested in mechanical contraptions. At age 14, having decided to become an inventor, he built a maze of wireless apparatus in the family attic. He attended the Columbia University School of Engineering.

During World War I, while serving in the United States Army Signal Corps, Armstrong invented the superheterodyne circuit. This is a highly selective means of receiving, converting, and greatly amplifying very weak, high-frequency electromagnetic waves. It is the basis for almost all radio, radar, and television reception. In 1933 Armstrong secured the circuit patents that were the basis of the frequency modulation (FM) system. He died in New York City on Jan. 31, 1954. And oh yea! he was a ham.

From: J1aguiar <j1aguiar@aol.com>
Subject: Percent of What
Date: Friday, April 16, 1999 8:53 PM

What percent of who are in favor of a lowering the code requirments? Seems as though the percentages of Advanced and Tech Plus's, is close to that number. Its easy to understand why there are so many who want the code out of the equation. Advanced hams are drooling for that Extra Class priviage, and of course Tech Plus's are all in some kind of rectal discomfort waiting to automatically move up to take over General Class frequencies. Seems as though all these numbers are manipulated to suit the needs of whom ever it pleases. The bottom line still remains. Why should any changes be made when the Extra Class population is growing faster than the lower classes. Just listen to the CW ends of the bands and it does not take more than a second to realize that its jammed with Extra Class CW activity, especially during a contest week end. The Majority of hams dont sit around crying for sympathy, they are all working DX on the low end of the CW bands.That percentage of no coders are the loosers that make up the percentage against, that is where the magic numbers come from. In fact, the number is so dismal,its pathetic and not even worth considering.

From: J1aguiar <j1aguiar@aol.com>
Subject: The Last Posting
Date: Saturday, April 17, 1999 9:37 PM

Many General Class amateurs who took their exam at FCC field office's have never forgiven ARRL for the incentive licensing. This cost the already General Class licensee privileges that he or she already had. Ofcourse the

majority have already upgraded to Advanced or Extra soon after the incentive program went into affect,but there are still those who have'nt Today new proposals being that Novices and Tech Plus amateurs are going to be given credit towards a General Class license certainly is rubbing a lot of old General Class amateurs the wrong way. I suppose they feel as though they should be given credit for at least the Advanced license. Then the Advanced amateur would want to be given the Extra Class. The ARRL really screwed up big time with incentives, only to go full circle and do a non incentive program to fix the mess they made the first time. The more you think about it, the more it begins to sound as though things are out of control. So now what is the ARRL up to now? Reduce the code requirements, make it so that Novices and Tech Plus licensees can move up to General. Is this the kind of leadership amateur radio deserves? And now I read here on the NG that some ARRL people admit that Amateur Radio is being pawned. Quite frankly I was surprized that anyone from the ARRL would post such a statement. I am afraid that amateur radio is changing, and its not for the best.

Date: Sunday, April 18, 1999 2:21 PM

ARRL You have to get these NCI thoughts out of your head. If the League wants to be around for the future it dam well better start by making Amateur Radio a respected hobby. There is just to much at risk here and those who are in favor of changing things dont know diddley about buisness and they could care less if the ARRL lives or dies.The only thing they are looking for is to use ham radio the way they see fit. I would strongly suggest keeping a firm grip on the helm and downsizing the over head at the leaque to offset the financial problems. Restructure and change within the ARRL and plan for a smarter future by keeping Amateur Radio healthy for the Y2K. Its amateur radio that is going keep the league going,and amateur radio means real hams, not the kind that cant learn how to use CW. Your basing your future on loosers and amateur needs winners.

Subject: Old Harley's and CW
Date: Sunday, April 18, 1999 5:33 PM

I Guess riding a Harley without a helmut has to be the way to ride even if one is bald on top, who cares. Certainly not a reason to wear a pot on my head. But what I wanted to say is like the Harley,beautiful as they are,gives me the same pleasure as CW. I wonder if NCI advocates ride Kawasaki or Honda and Yamaha's and let us not forget that silly sounding Suzuki.State of the art technology? Do CW men ride Harleys? I am an avid CW op and had a Honda and I never quite felt as though I was riding a real motor cycle.Oh yea...I just have to say one more thing, looking at a Vibroplex Bug or a Harley Davidson makes me feel good to. I wish Ford or Chevy would start making them 1934 convertibles again instead of them state of the art plastic wonders.

Date: Wednesday, April 21, 1999 7:23 PM

Ham radio is just about running out of life.The HF frequencies are going to sufficate the life out of hamming with all sorts of home control devices.Cables are radiating rf that is going to make hamming just about impossible.Things are looking grim.The commercial communications industry is eye balling ham radio frequencies for their own use.Groups are gathering to kill the code requirements. Things sure look bad dont they?

From: J1aguiar <j1aguiar@aol.com>
Subject: Why A License?
Date: Thursday, April 22, 1999 1:20 PM

Why does one need to have a license to communicate as in ham radio. Actually its a thing of the past and the days of having to regulate ham radio are no longer required. The FCC could simply set up some new form of guide lines to follow. The Citizens band frequencies could once again be combined as part of the allowable frequencies for communications. The name Amateur, or Ham and Even Citizens and Personal can be used as a classification. With this simpler form of communications, anyone could use these frequencies with out the pain and hassle that now exsists. Those who choose to continue on using CW can still do so. There is plenty of room for everyone to use the frequencies that now exsist. As for call letters, Pick anything you like " Handle".

From: J1aguiar <j1aguiar@aol.com>
Subject: Focal Points and Fuzzy Images
Date: Friday, April 23, 1999 11:15 AM

The focus seems to be on lowering the code requirements with the possiblity of eliminating them all together in the future. Seems as though because the code is no longer used by the military it is no longer needed. There are those who are having a difficult time mastering it and feel as though its a waste of time to learn something that is no longer needed. The code is said to be a weeder to prevent some from obtaining a ham license Lowering the code will enhance the population of ham radio thus increasing the ARRL membership. Total elimination of a license is frowned apon as that would destroy the fabric of ham radio. And I even read something about perhaps a special code only class for those who want to have exclusive code privilages,I dont know how that would work. ARRL is fighting to keep what we have, and that RFI is going to be a problem in the future and pehaps even now. I dont understand how a change is going to correct any of the above problems. The one main issue that remains strong is the code, its that code that is really the big problem.By changing that one aspect of licensing it will be the answer to our problems,for the time being ofcourse. I dont know about the rest of you,but it seems silly to consider that the only reason the amateur radio population is dropping is because of the code.

From: J1aguiar <j1aguiar@aol.com>
Subject: $ave ARRL and Ham Radio
Date: Friday, April 23, 1999 2:59 PM

Why dont we all just write out a check $100. and send it to ARRL to get them back on their feet and for a job well done.In the long run its going to be easier and cheaper to pay. Amateur Radio Operators have been getting a free ride long enough and its about time we stopped complaining and pay our way. Everyone here knows the real problem is money. Its costing a fortune to keep us going. If every licensed ham in this country was to make a donation to the ARRL in order to fight for what we have in stead of changing things that will lower our standards we would all be better off for it down the road. Making the ARRL the most powerful organization on planet earth is certainly not going to hurt amateur radio,and we have the numbers to do just that.

From: J1aguiar <j1aguiar@aol.com>
Subject: Code Speed
Date: Friday, April 23, 1999 8:43 PM

The current code speeds that are used in the license exams are far from being considered high speed. Twenty words per minute is certainly not a fast speed for CW, infact its very slow and somewhat uncomfortable. CW does not start untill thirty words per minute, that is when things just start to happen.High speed CW does not really start until fifty words per minute.The best CW speed for cashual conversation is between thirtyfive and forty words per minute as send with the conventional electronic keyer,any speed above is best handled by a keyboard keyer,then fifty plus words per minute is more enjoyable as it allows for the freedom of thought flow. To consider twenty words per minute high speed is incorrect, and anything less would be to say

the least, painful. One does not have to copy code, like one does not copy someone talking, its just understood.The faster its sent, the easier its understood.

From: J1aguiar <j1aguiar@aol.com>
Subject: Solomon,My Final Conclusion
Date: Saturday, April 24, 1999 1:42 PM

The only thing that may solve the problem with code and ham radio is to cut the hobby in half. The no coders can take the upper" phone bands" and those who like code and have passed the 20 wpm code test will have exclusive use of the CW end of the bands,as well as the phone end. Ham radio will be divided in two classifications. No Code Amateur Radio, and Extra Class Amateur Radio. The only hitch is that everyone will have to take the Extra Class exam or loose what they now have. With or without 20 wpm depends on what your priorities are. So here it is again. Everyone gets to be on HF. The no coders will get on all HF phone bands and the Extra will have both worlds because of the 20 wpm code test. Two classes of licenses.Oh yea. the beauty part is that any time a no coder decides that he or she wants to get on CW, he or she can take the 20 wpm code test at any time and become Extra. Last but not least, I still think we have another problem that needs solving and its the ARRL. I suggest that every ARRL member should dig into their pocket and help fund the ARRL so that they can continue on being major represenitive of Amateur Radio. Make no question about it, it is going to cost money to support ARRL and unless we all decide to support them, were all going to loose out in the end.

From: J1aguiar <j1aguiar@aol.com>
Subject: Internet I Phone
Date: Wednesday, April 28, 1999 11:01 AM

I would think that the Internet would have more to offer than ham radio.The most interesting is "I- Phone" that allows world wide communications in both audio and video at anytime of the day.No antennas, QRM or poor band conditions,RFI problems,and all the other problems with radio communications. With all the talk about CW, or Morse Code being out dated is to say the least when considering the possiblities available with todays computer technology. I often wonder why anyone today would even consider ham radio as a hobby. As for me, when I was a youngster radio was

the rule of the day. If I was a kid today I would not even consider ham radio for a moment. Actually speaking the only significant aspect of ham radio is the telegraphy part and everything else is by far surpassed by todays computer technology. This is why I really think that ham radio for all its worth should be left to CW. Does anyone really see a future in HF radio besides CW, or perhaps the commercial telecommunications industries? I my self, if I was looking at HF radio for the first time it certainly would not be for communications unless it was to practice the art of telegraphy. The only ones who stand to gain a thing out of keeping ham radio alive is the ARRL and the companies who make ham equipment. The VHF and UHF like in two meters need not even be licensed at all and should be open to anyone who desires to communicate and experiment with computer technology at a higher level. My opinion. Jaguar

From: J1aguiar <j1aguiar@aol.com>
Subject: HF for CW only
Date: Wednesday, April 28, 1999 4:28 PM

HF is for telegraphy.Why would anyone waist time playing with anything that is already being done ten times better on the Internet. Radio in the HF part of the spectrum is pretty near dead and telegraphys death certificate is now being written. I think both telegraphy and HF radio should be allowed to die together and all those seeking high tech communications go to where the action is. Its no wonder young people are not looking towards HF radio, its not because of the code,its simply because there are better ways of communicating than on HF radio. I Phone for instance, any time of the day or night I have had interesting, live audio and video communications to any place on earth. There is a whole world of ultimate techology in communications and that is where the young kids are. The local radio clubs here are mostly older people who are struggleing to learn more about computers instead of radio. and some youngsters who could care less about HF or anything it has to offer. I can remember when an HF station at the club was always in use. Today it sits there and no one gives it a second look or even cares to use it. On the other hand a PC on the internet you cant get your hands on it. What does the club have for lectures these days?Certainly not radio. Its all mostly slide shows and talks on Internet and computer technology.Ham radio classes are almost non exsistant.

From: J1aguiar <j1aguiar@aol.com>
Subject: Listening
Date: Saturday, May 01, 1999 3:53 PM

Just listening here on 20 meters.I hear very few signals on the phone part,but on CW the signals are coming in from all directions. I turned on the spectrum scope and it also showed strong activity on the lower CW end of the band. During the evening the same is true on 40 meters. CW is the most popular mode of operation. One does not need a crytal ball to know where the action is.

Subject: Waiting For The Other Shoe To Drop
Date: Tuesday, May 04, 1999 12:40 PM

With all the talk that has been going on here about code, things are awfully quiet up stairs.Everyone is sort of waiting to see which way the FCC is going to go. As for me I think I will get the Windex and clean my crytal ball because the last time I looked into it I saw Mr. Ed dressed in wolfs clothing.I have even tried talking to the magic mirror on the wall and all I can see is the ARRL with a basket of poisened apples that have long since gone rotten.How ever the NCI group for some reason insists on eating from the basket. Getting back to the other shoe,could very well be the FCC does not have a leg to stand on,but does that mean one shoe is missing ? Gosh we could be waiting for nothing.Oh Yea! that reminds me,let me tell you about the fellow a saw once at a Boston ARRL ham fest.This guy had sneakers on, one was sort of a dirty white, and the other was bright red, holding a can of RAID bug killer trying not to be noticed as he stood close to the

Vibroplex booth ,what some guys wont do.

From: J1aguiar <j1aguiar@aol.com>
Subject: Roll Over Hirem
Date: Tuesday, May 04, 1999 8:17 PM

As Amateur Radio slowly decays into what will soon be nothing more than a waist land for the use of personal communications and home control devices, so wont the ARRL. Early into the new century the ARRL will be dismembered and forgotten about. Personal communications will also disapear from the radio frequency spectrum as more and more electronic devices consume and turn the HF spectrum into a waist land of white noise and digital pulses that have no significant meaning other than to turn on and off someones automated home servicing system. Licenses will no longer be required and radio frequencies will simply be there for the taking by anyone who finds a use for them. So what are we all waisting our time over code and licenses for. Let everyone do as they please with what ever is left of it because pretty soon it aint going to be worth listening to anyway.See you later ARRL, the future is coming and it wont be in your favor.

Subject: Telegraph Keys
Date: Friday, May 07, 1999 3:55 PM

I wonder who is buying all these keys, paddles, not to mention keyers. I hear the sales on Bugs and other varieties of keys and paddles are at an all time high at some high prices. I took an inventory just for the heck of it to see how much money I have invested in keys and it comes to well over a thousand dollars.Whew! if I had only known a few years ago that the price of keys were going to sky rocket. A key that cost $75 is now selling for $150, and some keys have trippled in price. I have one here that cost almost $300 and I cant remember paying more than $100 for a key in my life. If code is eliminated I wonder if the price of these keys will go even higher ?

From: J1aguiar <j1aguiar@aol.com>
Subject: Start Over Again
Date: Sunday, May 09, 1999 9:27 PM

I think every ham today, Extra on down to Novice should be subject to an entirely new exam on electronics theory,non multiple choice along with an oral examination. Every licensed ham should have to build a complete radio station without any help. Non of this appliance plug and play units. The code test should be a grueling solid 5 minutes copy of 20 wpm for Extra. No other class of license. You get the Extra or you dont get to be a ham. Once you prove you can build your won equipment, then you will be allowed to buy a radio.That would reduce the QRM down to where it was some years ago when it was much nicer to be on the air. Get caught without a license and its 20 years and several thousand bucks like the old days. I am sick and tired of listening to all the cry babies, wa wa wa no more code wa wa wa, why do we need code wa wa wa.

From: J1aguiar <j1aguiar@aol.com>
Subject: New Game
Date: Monday, May 10, 1999 3:24 PM

If I was a kid all over again ham radio certainly would not be on my list of things I would want to do now. It does not matter if its a code test or what ever, if I wanted to be a ham nothing would stop me from getting to where I waned to go. Looking at what technology has to offer today, ham radio can never compete.Computers are the way to go and it certainly would be my choice of fun things if I was a kid again. I find that just using Internet Phone opens the biggest door for world wide communications using both audio and video. Its difficult to go back and listen to ham radio after playing around on the internet. I have tried SSB and its just not as good as the Internet Phone. I do think CW is at its all time high for modes of operation at this time only because of the contests which I have no interest in other than listening for a moment or two. Towers and antennas not to mention thousand apon thousand of dollars invested in the radio shack here just dont compare to the small investiment of $2500 invested in a PC. What I cant imagine is how in the world is ham radio ever going to spark interest in all these new people by reducing requirements for licenses? If the use of ham radio was for the taking, no licenses needed it still would not be attractive except for a few who write in the NG and that is not a large population. My entire family are Extra Classed and they all have since given up ham radio. Collins S lines and Kenwoods collecting dust and cob webs in some dark corner of basements,antennas that have long since been converted to be used on the VHF marine band.One who has an Icom 706 because its tiny and out of the way, and one who is a retired doctor who still now and then fires up his old Hallicrafters to listen when there is nothing else to do. Ham radio for me may now be nothing more than a bad habit that has been taking up more of my time all these years. I find my self wrestling with the thought of dismantling towers and antennas and selling off all the ham gear while its still worth something. So its not just the new kids who are not interested, its the older hams that are also loosing interest. Ok, I have said more than I should have again and I know I am going to get picked to pieces for it as usual, but go a head and pick as long as your having fun. 73 Jim

Subject: Save CW
Date: Tuesday, May 11, 1999 9:45 AM

The sure cure for NCI and ARRL insisting that a change has to be made is to simple discontinue being an ARRL member. That will kill the no code debate and them arogant NCI nit wits. Seems as though these younger people just want to come walking in and get everything the easy way. If all the old so called Farts who are for keeping things the way they are stopped subscribing to that QST magaizine I think the message would come through loud and clear. I do work many CW Farts as one NCI member so says it ,who by the way earned their license the old fashioned way, have already discontinued QST years ago when ARRL first had the brain storm of improving ham radio's image by inventing the incentive license. That was supposed to give us hams more respect. The only thing the ARRL did was shoot themselves in the left foot

and has been financially limping ever sincel. This time it will be the other foot and perhaps Ham Radio can get rid of this ARRL once and forever. The ARRL has lived its day an today its nothing more than a bloody plaque that is going to wipe out ham radio in the end. Once again ARRL has nothing more to gain than increasing memership and they are willing to sacrifice everything that ham radio stands for in the process. Amateur radio is being led to slaughter by a magazine puplishing outfit that is in financial ruin.

From: J1aguiar <j1aguiar@aol.com>
Subject: Taking It With Them When They Go
Date: Wednesday, May 12, 1999 2:51 PM

The ARRL is going to take everything with them when they go.Amateur Radio is going to be left in ruin. Right now they are slowling, limb by limb dismembering Amateur Radio. Morse is being accused of being the cause of all the problems.Old time radio hams who love telegraphy are being accused of holding things back.The younger" You Owe Me Society"are demanding easier access to ham radio " privilages. " Amateur Radio has been split up into groups and are now fighting among each other, the divide and conquer method approach . All those who are apart of the NCI group are only ruining what once was a good thing just because they are led to believe by the ARRl that code is the major problem.The sooner all Radio Amateurs demand unification by reuniteing and demand that no lowering of any standards be set, the sooner Amateur Radio will regain its strengh into the future,but we can not do it by lowering standards and allowing ARRL to continue on proposing idiotic ideas in order to gain members into the ARRL. The population of Amatuer Radio need not be so large that if it does not support the ARRL financially is considered to low. ARRL has continued on making the population of Radio Amateurs its main goal for no other reason than its own membership.If the ARRL was to simply go out of buisness,things would improve in a more natural way without forceful recruiting programs to attract more members.

CW is going to survive and be around long after ham radio perhaps forgotten and most of us here today are dead and buried.If anyone thinks otherwise they are most welcome to do so. If you live long enough and turn into an old goat you will remember what I just said and wish that you had taken the time to learn that wonderful art of Morse Code, but then its never to late to learn is it?

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code Hazing Rituals
Date: Monday, May 17, 1999 8:47 PM

Where do so many of you NCI advocates get the notion that the Morse Code is a form of hazing. If you were to go for your ham exam and a VC person beat you over the head with an old telegraph key because you were not coping the code, then I would say it is a hazing. I think all you NCI people have monkeys on your back and are still afraid of the dark.

From: J1aguiar <j1aguiar@aol.com>
Subject: It Makes Sense?
Date: Friday, May 21, 1999 9:12 AM

1. Code is not longer needed.
2. I can not learn code.
3. Trying to learn to copy fast enough has causeed me mental depression.
4. I would not allow my childeren to waist time learning it.
5. I have my Extra and I can copy 25 wpm but never use it.
6. Governments want Amateur Radio frequencies so we need more hams.
7. Younger people would consider ham radio over internet if it were not for the code.
8. Having to learn the code is a form of hazing.
9. Morse code is used to discriminate.
10. Records show that hams who have learned the code and became hams cause more of the problems on the amateur radio bands.
11. Anyone who is against changing the code requirments is said to be old and living in the past.
12. The ARRL would like to see the code requirements changed because it would attract more interest into the hobby, and money has nothing to do with it.
13. The majority of hams using CW are found to be around 60 years old or older.
14. Keeping code requirements as they are will put the future of Amateur Radio at risk.
15. The future of Amateur Radio is looking grim because ARRL membership is low.

From: J1aguiar <j1aguiar@aol.com>
Subject: Were In Good Hand
Date: Friday, May 21, 1999 12:09 PM

I guess Amateur Radio is in good hands. As long as it can keep the money makers happy there will be no problem. I suppose if other Governments including ours could not touch ham radio frequencies if more hams were spending money on new radios and magazines. Then I guess the bands would be so crowded that it would be useless like the CB radio service and no one would want them. Could it be that the reducing or eliminating the code requirements for ham radio licenses be the answer? That must be it, get rid of code and amateur radio will survive, yup that must be it.

From: J1aguiar <j1aguiar@aol.com>
Subject: New Tests Requirements
Date: Friday, May 21, 1999 8:39 PM

No one with an IQ of less than 99 is allowed to take a ham exam. A blood test must show no signs of ever having genital infections.General physical GI style that includes a rectal exam, if you have hemrhoids you will be disqualified from taking the Extra Class exam . No one shall be blind, deaf and must have at least one good arm, hand and leg with a foot in order to qualifyfor the code test. All other limbs are not required .All adults must be four feet or taller and not weigh more than 98 pounds. Anyone under the ages of one year do not require a license . Anyone who now holds a license and is 60 years of age or older and sufferes from age spots and memory loss and is a member of the telegraph wireless society is automatically disqualified and no further renewals shall be granted unless he or she is an official of the ARRL and in good standing with NCI with a written letter of approval.

Subject: CW Just To Valuable
Date: Sunday, May 23, 1999 12:02 AM

How can anyone justify not keeping the code requirements as they are now. The code test must remain intact as it is now because changing it in anyway will certainly lower the standards of Amateur Radio. Anyone who learns the code to become a radio ham certainly has not waisted his time in doing so. Knowing the code is a valuable asset to communications.To say that the code requirements should be changed for the sake of attracting more new comers into the hobby is without question not in the best interest of amateur radio and the art of communications. CW is just to valuable and an effort from everyone who wants to become an Amateur Radio Operator should be made to learn how to use it with the upmost skill. Its unthinkable to even consider Amateur Radio licenses being issued without the current code requirements.

Subject: Old Generals Get Screwed
Date: Monday, May 24, 1999 4:03 PM

How about the old general class, remember when they used to take the license exams at a FCC field office ? They want to grandfather the Tech Plus and the Novice to general right? How come no one considers grandfather a general class who took his exam some 30 years ago at one of the FCC exam offices.I think it would be only fitting to at least consider giving them the Advanced. Now lets not forget the guy who took his advanced back then also, will he get an automatic grandfathering to Extra? Now this leaves the the Extra, what does he get, a free cigar for his efforts ? This whole idea of free rides is crazy. If the code tests are going to be reduced or even eliminated I think Tech Plus or Novice's should be required to retake the entire upgrade version of the new license. It only seems fair that they take the new exams that will be issued seeing as they never did pass the required code tests. So here it is again. The FCC has eliminated the code or reduced the required speed and all those who have still not upgraded to general will have to take the newly formulated exams inorder to become general.

Subject: The Big Joke
Date: Monday, May 24, 1999 5:43 PM

Two major initiatives will allow greater access to the full range of facilities that Amateur Radio has to offer, and broaden the appeal of the hobby to a wider audience. More amateurs will have the opportunity to experience worldwide communications, and newcomers to the hobby will find it possible to make contacts on a wider range of frequencies. In the above paragraph they use the words "major initiatives". What initiatives are

they talking about ? What they mean is they are going to give access to a full range of facilities that amateur radio has to offer. Hell it did not take any initiative to get that.

Subject: "Unknown Organization" speaks out
Date: Sunday, May 02, 1999 12:40 AM

To whom it may concern (or even not concern), At this time, alleged "unknown organization" will expose, by using "we" logic, that the ARRL is actually a cover group of NCI. DISCLAIMER: "Unknown organization" makes no claims that this is in any way a statement of policy or belief of said organization or any members or non-members. This is only an example of "inlligence type logic" and this "example" is not to be taken any more seriously than the original. "We" has "proven"; ;Premise #1 - Passing a code test is an achievement. ;Premise #2 - Things are achieved via hard work. ;Conclusion #1 - Passing a code test requires hard work. ;Premise #3 - Whine is defined as "a complaint uttered" {Webster's New ;Collegiate Dictionary} ;Premise #4 - [ARRL] has stated that it wants to lower the code test ;speed. [This could] be "interpreted as a complaint against an unjust CW ;test." ;This is validated by the fact that [ARRL] sent a document to the FCC ;requesting that its complaint be acted upon. ;Premise #5 - Publishing a web page with the intent that the web page ;gets read is synonymous with making an utterance. ;Conclusion #2 - [ARRL] is (and the members are by attribution) whiners. ;Premise #6 - [ARRL's] *stated* goal is [to change] code tests. ;Premise #7 - An organization with the *stated* goal of [changing] ;code tests will tend to primarily attract members who [want to change] ;all, or many, of the code tests required for the licenses they seek. ;Conclusion #3 - The [ARRL] membership is comprised primarily of people ;who have not passed all, or many, of the code tests required for the ;licenses they seek. "We" concluded with; ;I am now allowed to freely call any [ARRL] member a "malcontent", ;"whiner", or "non-achiever" at ill. ---- End of "proof" ---- And using this "logic", it follows that the ARRL is actually a whining cover group -of- NCI. This "logic" can seemingly be used against (almost) -anyone- who wants code test changes made. And since those "whiners" at the FCC are the ones that really started all this with that darn NPRM Jim Rosenthal, WA4STJ (Non-member of ...., or maybe I am.)

Subject: Hot Shot Electronic Engineer
Date: Thursday, June 03, 1999 5:27 PM

I remember a fellow some years back, considered as being a hot shot EE, it took him several trips"13" to the FCC office before he came home with his General Class. He was an Electronics Engineer and built his radio shack from scratch. Back then it was AM and his station was a big floor console on casters, Impressive it was, except he was getting into every television, radio and he was even getting into a bathroom next door,which I thought was funny then. As long as I knew this guy he never did correct the TVI problem nor did he know how. The FCC even put him on restricted hours for a spell. This fellow would be on the air constantly during the time he was at home and would stay up until the wee hours talking to who ever was there on his radio and unable to get off to work the next morning. Needless to say he was a disgrace to ham radio and the neighborhood I lived in, and because of him I was ashamed to admit that I was a ham also. Being an electronics engineer does not mean he will make a good ham. This fellow would have made a good NCI person as he hated code. This does not mean of course all electronics engineers are this way. Being an electronics engineer has absolutely nothing to do with being a better radio amateur.

Subject: How Many NCI Are ARRL Members?
Date: Sunday, June 06, 1999 12:05 PM

I wonder just how many NCI who post here are ARRL members and support ARRL by their membership dues ?. The majority of ARRL members are not NCI and the majority of ARRL members are PRO CODE. In this equation, lets assume that we take into consideration all the hams who are currently licensed as Advanced or General, and let us not forget Tecnician Class who have every motivation to see the current code requirements lowered to in order to upgrade to Extra Class. If any adjustments are made to the licenseing requirments to induce growth in the amateur radio population, it will not only be a dismal growth increase that will reflect nothing more than a negligible growth in ARRL membership, amateur radio will also loose its crediblity makeing it less attractive. Once again, were are not selling a product here. 73'es J1

Subject: The End Is Near As Predicted
Date: Sunday, June 13, 1999 2:23 PM

It sure looks like the end is near for ARRL and VHF and UHF. As for HF radio I think its on its way out as well, but not totally.In the not to distant future HF radio will continue on being the place for CW activity. Telegraphy will dominate the HF bands over any other mode of operation. SSB and digital will soon disapear from HF radio. Those who remain using CW or Telegraphy on HF will have no interest in the ARRL if it should even continue to exsist, which I doubt it will as we know it today. One thing for certain, the quoted " Devoted Entirely To Amateur Radio" will be nothing more than a memory. Change is coming as predicted. J1

Hi Jim:
I did it "She is 55 es she is his sister" and its a good exercise. I have been using a bug for the past half century and I must say there is no substitute for a Vibroplex. I have seen and tried a lot of so called bugs and they are at best junk.

I am not a Vibroplex collector, but I never refuse buying an old Vibroplex. The other day I was driving past a yard sale and stopped to see what there was.To my surprize I saw an old Vibroplex Original Standard Mode just like brand new. $5 and I walked away with it. Many years ago I owned a Blue Racer and I cant remember where it went. Today I have a new Original Deluxe that I bought when they were being made up in Maine, I also have an old Lightning Bug and the one I got at the yard sale. I have a closet full of paddles that are all brand new and some of which cost as much as $300. However I use two Vibroplex Paddles, one is the older single lever "non Iambic" and the other is a newer double lever "Iambic" which has been modified for non Iambic use. The other non Vibroplex paddles still remain in there boxes and have never been used. I must admit though, most of them are really a work of art and required some heavy design and machine work to produce, not to mention the extensive use of brass and silver. Its amazing though, in todays age that Vibroplex is still able to produce the same product as it did some 50 or so years ago. Some things dont change, thank goodness. Last but not least, the sound of a Vibroplex is the signiture of

a pro.HI J1

To all you NCI people, I say raspberries to you. Zane W1HIC made fools of all you people.I think the ARRL published the story to prove a point. Wake up NCI, everyone is laughting at you. The whole NCI thing is one big sham. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Learning Code Is Easy
Date: Saturday, June 19, 1999 12:58 PM

Yes its easy. Actually its so easy that it scares the hell out of most people.All it requires is a minimum amount of effort to be able to use code at 13 wpm, and 20 wpm is not much more faster and a lot more enjoyable. Younger people are not as likely to become intimidated by learning the code. I think older folks are more affraid of failure than anything else and that is why the code has become the stumbling block. Anyone can do it, and even those who have tried for years can do it if they just put their minds to doing it instead of failing. Reducing the code standards is going to cause more harm than good if it means that so many people wont be required to learn it to get their license. Amateur radio is Morse Code and CW is one of the most used and enjoyed modes of operation in amateur radio today.To become a ham and not know code is a horrible thougt. That is the truth. 73'es J1

From: J1aguiar <j1aguiar@aol.com>
Subject: No Respect
Date: Monday, June 21, 1999 2:14 PM

I think if keeping the Morse Code serves no other purpose but to filter out the rude arogant and self centered greedy indiviuals who call themselves NCI, then its all the more reason that the code requirements remain intact

as they are today. Its bad enough that some have already found a way around the code and have obtained an Extra Class license. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: All CW
Date: Wednesday, June 23, 1999 3:15 PM

The FCC should consider opening all HF radio, general coverage to CW only and require a 50 wpm code test as a weed eater. This way the No Coder Communicators can have a ball without having to put up with CW on their ham frequencies. It would require a new licence for telegraphy only, and to tell you the truth I just as soon it not be called Amateur Radio anymore. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Obvious Postings
Date: Tuesday, June 29, 1999 11:53 AM

Why do people continue on trying to promote the no code standard, or at least reduced code requirements. Its obvious that these so called no coders either dont like CW, or they dont even want to learn it,not to mention those who stand to gain by it. They even invent reasons why learning the code is of little importance and that if the code requirements are not reduced it will be the end of ham radio. And even worst, some of these people actually take it apon them selves to teach and promote amateur radio to youngsters. I have never met a youngster yet who has found learning the code difficult or uninteresting and that goes for many of the adults who find learning code something they have always wondered about and never had a reason to learn it until now. Amateur radio is a very good reason why one should learn and practice using the code. A amatuer radio population that is code ignorant is not amateur radio anymore.J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Another Joke
Date: Friday, July 02, 1999 9:30 AM

Here is part of another posting quoting the famous ARRL letter.

"The league has already sent a detailed letter to the Commission recently almost demanding that they adopt their proposal as a middle of the road compromise and claiming that the delay is stopping a lot of Amateurs from upgrading their license class etc."

Reading the above I am wondering how a delay could have stopped anyone from upgrading. Surely by now the ARRL must realize that the term upgrade is no longer a valid one. If the ARRL proposal is to ever be excepted, then there will be no upgrading. The entire incentive program would need to be changed before any new proposals can be considered.

Looking a bit closer at the ARRL letter shows more than a concern for all those who are waiting for the new proposal to upgrade. It shows that the ARRL has once again shot itself in the left foot and is prepared to shoot the other in an attempt to increase a dwindling ARRL membership.

The last time I visited a radio club that was doing VE exams for Amateur Radio Licenses I never once saw any guards standing at the door stopping anyone from upgrading, if fact everyone was welcome to apply for and take the exams. 73 J1

Subject: And Then He Created HF
Date: Monday, July 19, 1999 3:00 PM

There is no question that CW and HF radio go together. Anything else is just a passing fad that comes and goes. All your digital modes are nothing more than computer parlor games for those who like to play computer jocky on the ham radio bands. Digital modes are best left to the cable or the VHF and UHF part of the radio frequency spectrum. The only other mode that I will consider for HF is SSB. Single Side Band works out really great on HF. Why anyone would want to use digital on HF is beyond me, especially when they can sit back and communicate with CW or SSB with out all the computer junk that is required to make digital possible. J1.

Subject: The True Story
Date: Tuesday, August 17, 1999 1:17 PM

When all is said and done and the reduction and or elimination of the Morse Code requirements become the standard amateur radio as we know it will change for ever. The change will make it possible for many who simply want to utilize ham radio for personal communications and have no interest in amateur radio for what it is. Amateur radio is not and never has been intended to be used for commercial use. Many who stand to gain financially are anxiously waiting for the change in hopes it will increase the population of licensed amateurs. None of these changes are best interests of amateur radio, it will indeed suffer from the increased numbers of non amateur radio interested people and those who are hoping to financially gain. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Poor Reasoning
Date: Monday, August 23, 1999 1:03 PM

There is no reason other than laziness or stubornness, not to mention the" YOU OWE ME" attitude for not being able to learn code and get up to speed. Amateur radio is unlike any other kind of communications. It does not matter if the commercial or military has stopped using code or not, its all the more reason why amateur radio must keep the code requirements as they are.In the history of amateur radio everyone learned the code and was never sorry they did, even if they chose not to use it. One could simply say that they would never build or repair their own amateur radio station equipment, so why should they have to learn the technology that makes it all work. There are countless reasons why we all should not learn or do things that we dislike and we try to justify reasons in one way or another. One of the reasons that has really come to light is that code is being forced on one,

its a pitty that anyone could even consider that reason as being a valid one. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: CB and Ham Radio
Date: Saturday, August 28, 1999 1:23 PM

Everyone should be welcomed to join amateur radio. To say that the people who use CB radio are not capable of becoming a ham is not true. I knew of an old timer who for years was a ham, electroincs engineer, ET in the Navy where he learned electronics and through the years as a ham he built all his own amateur radio equipment. As time passed he gave up amateur radio for CB. But what I am saying is not that, I think everyone should be treated equally. Anyone who wants to get into ham radio should not find it difficult. Most of the radio clubs welcome anyone and everyone is always more than willing to help one get started. I know of many hams who were once a CB'er and have made the transisition without any difficulty what so ever. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: CW Forever ?
Date: Sunday, August 29, 1999 9:27 AM

No question, CW is the favorite of all modes and its not about to change, not now and not later. In the future its possible that ARRL may be long gone due to financial illness and Amateur Radio as we know it today will certainly change. There may even be a new magazine that says"Devoted Entirely To Amateur Radio" on its cover. In the future CW will become even stronger than ever before and those who choose not to use it will be left out,not because of any license requirements, but because they chose apon them selves to be left out. I would not be surprized one bit if Amateur Radio becomes a CW only activity some time in the future because nothing else will be of interest in radio other than the use of it, in fact its already happening. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: To Many Poor Reasons
Date: Saturday, September 04, 1999 2:04 PM

I often wonder if there is an end to the excuses why one should not have to learn code, or why code should be removed from the amateur radio license exams. They are all excuses, one way form or another, non of which have any bearing on amateur radio and, or its requirements. I think anyone who insists on creating reasons to why they should not do something instead of simply doing it , especially when doing is much easier than not is a fool playing a fools game, there are no winners in that game. I hope that the FCC listens up and takes all into consideration in thinking about the new proposals, it would be a sad day when fools can be considered worthy of any changes that would destroy the incentives of those who take pride in what they do. The poorest reason is, " just because you did it, why should I have to be forced to do something if I dont like it" J1

Subject: Another Persons Opinion
Date: Monday, September 13, 1999 7:05 PM

I am posting this for another person. After my telling him what has been
going on here on the NG he asked me to post this for him until he can find
his way clear to responding himself. Here goes the following text.J1

"CW is part of ham radio; do away with CW and you do away with part of ham radio. Sure, cw is not essential but niether is Ham radio, it is just a HOBBY. The CW requirement is like an IQ test. If you can't pass the code, then your mentally retarded and really should not be playing with electricity anyway. Why lower the standard? As it is now, the newer hams I've met are a bunch of wingnuts GIVEN a license. Most hams are wingnuts to begin with. Ever have an eye-ball for the first time with a ham you have heard on the air many times. Quite frankly, I am more times than not, very disappointed. It seems to me that we ought to increase the code speed requirement. Seems to me, like a lot of things today, we are going BACKWARD...FAST! Why pick on CW? Anyone who tells me that the written exam is more difficult now that it was years ago is a mental midget; it has always been a piece of cake. Anyone that complains that the exam is difficult is a cry baby and we don't want them. Same goes with the code test...can't pass it, go to K-mart or radio shack and buy a CB radio and be like the rest of the assholes. Don't ruin my hobby".....That is the end of the message....I found it somewhat interesting coming from a younger fellow, who incidently has an Extra Class License. J1

Its bad enough now that Amateur Radio already has a code free license, that in my opinion is a finger in an eye of ham radio. To even consider the reduction of the code requirements is a finger in the other eye. And here we have the ARRL with its left foot already shot off and about to shoot the other one to hell. Amateur radio is in a bad way, half blind with one eye out and about to go blind in the other, and with a crippled organization leading the way I think were going to walk right smack into the gate at Y2K. As for the FCC, I would not blame them if they pulled the plug on ham radio. Lets face it, Amateur Radio has out lived its purpose and were dam lucky they have not pulled the plug on us already. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Class Of License
Date: Saturday, September 18, 1999 8:51 PM

It seems to me that all the griping about learning code has to have some sort of logical answer. Here we are seeking ways to simplify things and we dont see the answer to the problem because its standing so close to us. There can be two classes of ham radio licenses, the Extra will be called Class A1,and will require the full 20 wpm test. The next to the top Class could be A3 full privilages above 30 MHZ and all phone privilages below . There wont be any need to limit them from using CW, because they wont know how anyway. So there we have two classes. The A1 and the A3.Everyone gets what they want with only two classess of license.Oh yea, the A3 class can not have a vanity call, they must have a 5x5 call, eg, abcde5fghij. That would be Alpha Bravo Charlie Delta Echo FIve Fox Golf Henry Item Juliet, That way we will know them dummies when we hear them on the air. HI J1

Subject: Unreasonable

Date: Thursday, September 30, 1999 4:58 PM

I don't know who really wrote this one, but its a good example of the mentality thats behind the code requirment changes. Here goes...

I'm not a ham yet Rick, but I have shifted through hours of reading on the internet. I've poured through the IARU site,ARRL site, and email reflectors in order to get a full grasp on the morse code debate that goes on here. Even though I would like to see code eliminated, I still think 5 wpm should be a standard requirement across the board in the future till the requirement is struck from the international treaty. And yes, 12 wpm is reasonable for the Extra class at this time, since no one is required to hold an Extra class license unless he/she so chooses.

So there you have it.....What is so reasonable about a 12 wpm code test for an Extra Class License ? And then he says " no one is required to hold an Extra Class license unless he/she so chooses", are you kidding, with a code test like that you can dam well bet he/she will break a leg getting down to the local radio club for that next Extra Exam. Unless they keep things the way they are, we can expect to see Amateur Radio go down the tubes in the next decade. J1

Subject: Why A License?
Date: Tuesday, November 02, 1999 12:53 PM

Is there any reason today for amateur radio licenses? Seems as though the FCC and ARRL and everyone else involved in regulating amateur radio licenses is struggleing to justify a reason to what I assume as an almost un needed license. I read where "most" amateurs are no longer involved in the technical apsect of radio electronics. Every ham, or I should say the vast majority of hams today buy their radio equipment commercially. Repairs are mostly done at repair centers. Actually there is no need for any license that requires a written exam dealilng with electronic theory. Perhaps a simplified exam dealing with operating proceedure may suffice. As for the Morse Code, there again, it has been proven that the majority of people who desire to obtain a license have no desire to either learn the code or ever use it . It would seem reasonable that a license could be issued on a simplified exam dealing with just the important things such as important FCC rules. My question is, why are licenses required at all. J1

For the same reason that Morse code should be. It is still a very viable, frequently used technology that can and does serve the public interest. There are millions of electron tubes in existance, and many hams still use tube type gear, some of which is hybridized such that the drive and final amplifier stages are tube type. Othere still use gear based on vacuum tubes, and many still build simple tube type ham gear for use on the ham bands. All news to you, isnt' it?
The point is clear: Just because more efficient technologies have taken over the mainstream of communications in no invalidates the usefulness of the eariler technilogies still in existance. When they become as hard to find as a wireline telegraph installation, then it might be time to write them off completely.
I don't know of a single wireline telegraph installation still in use. There are a few guys in a St.Louis club who like to play with it in their own meetings.

Hi Dwight,

Thanks for the clarification. While I've not gotten to the six element level, I did add two more director elements to expand her to a four element quad. I need to clarify though. I have a half-acre plot with some fairly tall trees. When my wife and I first settled in, I threw up a dipole (taped to the wall, no less) and amazed my wife by working xxxxxxx (geographical references removed to protect the guilty) and xxxxxxxx xxxxxx in short order with 12 watts.

She asked if we'd be able to QSO with her Uncle in xxxxxxx, I told her we'd give it a shot but decided to "stack the deck" in our favor by puting up a stationary wire quad, appropriately aimed. Viola, just as if he was in the room next to her. I explained that we'd do even better on 10 meters with 100 watts and clearer frequencies. Now she's studying for her ticket. That's how our stationary wire quad was born. I'd love to erect a six element conventional 10 meter quad. (Yet another project to add to my list.) My next 11 meter project is a three element pseudo-quad with a "bi-square" as the driven element. I'm mulling over exactly how to feed this array. Our trees give us nice height (and camouflage) although my best friend in rural MD laughs at me and jokes that our trees qualify as large branches where he lives. That's ok, for all his space he can't put up an array of any size due to his neighborhood's deed restrictions. His hand are full just camouflaging a 2 meter quad in his trees. Anyway, sorry for getting so long winded on you. Take it easy, Dwight, and thanks again for the info.

But that statement does not address the problem. There is NO NEED to
memorize questions and answers, and certainly not any such numbers at
that. Applicants who prefer just take one element at a time and work
with it until they can match enough answers to their questions to pass
that test, then move on the the next test element and repeat. You don't
seem to think they really do this. Worse, you refuse to believe it when
I and many others tell you outright, from both watching it happen and
from those who have done it, that it is happening.

So why do you insist on playing coy, Ed? Do you really believe that
none of the anticoders would dump code from ham radio instantly if they
just had the opportunity? Well, they DON'T have the opportunity - now.
So it makes much more sense to just be congenial and say "We really
don't care if you use it.." knowing full well there's nothing they can
do about it - now. But the drive to abolish mode allocations in the HF
bands, should it ever come to fruition, might change that opportunity.
So then, things change, don't they? If they decide to populate the
traditional CW/Data end of the bands with QRO voice, they have a
'point' then that "there is no room for 'i nefficient' legacy modes.."
With the type of help the Commission now had, judging from the initial
wording of the restructuring NPRM should we not expect a sympathetic ear
there?

To quote Bill Sohl in a very recent posting "Times change, positions
change.."
(or at least that's the overt explanation).

It is still completely possible to build an automobile from scratch, Dick,
but virtually nobody does it anymore. Times have changed. Hams simply do not
need to know how to build their own rigs anymore. It's nice if they do
but it is not necessary just as it was not necessary for you to build
your own tubes. As the level of integration goes up, the necessary
knowledge goes down. That's the truism of technical progress.

Have you ever asked yourself: What is the most important function that
hams perform? What knowledge/skill does a ham need to perform that
function? Should arbitrary knowledge/skill requirements keep people
capable of performing that most important function out of the ARS?

What kind of answer did you expect, Bill? :-) Wonder if Dick would
support a test on building one's own tubes as a Morse code exam replacement?

Well then, those guys are doing exactly what you want, Dick. They are
expending a lot of energy doing the unnecessary work, work, work of
memorizing the Q&A's when it is a lot easier simply to learn the material.
They are taking the hard way out rather than the easy way. That's exactly
what you said you wanted.

It was not a value judgment, Larry, just a means of identification.
Slow/med/fast for 5/13/20 seems an entirely logical way to identify
the different code *testing* levels.

Sure. The side that moved down onto the group residing there, of course. Which would naturally lead the residents, mostly <100 watt users, to go QRO, and well within the rules, mind you, since rules say one can use whatever level of legal power it takes to complete the communication. So then you have CW ops at a KW competing with SSB ops running at least that level. Result? Chaos.

I can't be responsible for your refusal to read in detail all the NCI postings of the past few years. You're the guy who just can't believe that the question pool exams can't be passed without learning all the detailed material the questions are based on when all the exact questiona and their exact matching answers are given in advance, and many study guides show only the barest minimum of information, that is only the correct answer choice to each question, and a number of posters here have stated cagorically that they passed the tests 'studying' exactly that way.
You are deliberately turning your back to the realities of the situation. That sets prececent for your attitude toward NCI and their goals. See no evil, hear no evil, speak no evil.

As you well know, that is a figure of speech, intended to illustrate
how easy it is to get an Extra class license today. But there ARE lots
of trained (and not so well trained) monkeys on the bands.

> ARS after April 15, 2000.

If you had a clue you'r know that the freebanders infiltrated long
before restructuring, and many held ham licenses and continue to to hold
them as they still work their illicit activities.

How do you know your "mode war" is not just
> another one of your many delusions? Do foreign hams with no legal mode
> separation have mode wars?

So you're too clueless to do the numbers and get some factual figures?
How many total hams are in Canada? Germany? England? in ALL of the rest
of the world? In Japan they have lots of licensees but the vast
majority are severely limited in both power output and band segments.
Most other countries of the world have so few hams it matters not the
least where they operate nor how, QRM is not a factor.

USA has several times the numbers of active HF hams of most of the rest
of the world combined, all concentrated within a limited area of real
estate, all ready to QRM each other. The Tower of Babel personified. Why
do the users of different modes mostly stay separate from other modes?
Why do you almost never hear a CW QSO up in the phone portions, where
they have always been completely legal? Why don't you believe the hams
in other countries who state categorically that they are opposed to
changing US rules to eliminate the CW/Data portions, for this very
reason?
Why don't you spend a little time learning about some of this before
running your mouth?

Cecil has said that his primary interest in ham radio is in
experimenting iwth antennas, so it should come as no surprise that he
know so little about what goes on on the air.

How do you know? There is a school of thought that says otherwise.

Generalizations are dangerous. So is ignoring a large body of experience which shows trends that are dangerous. Many homosexual men are known to prey specifically on young boys. Should parents just ignore that fact since they are a minority of homosexual men?

It always amazes me that so many highly educated people are incapable
of seeing the larger picture. And in so many different ways. Cecil
thinks that just because ham radio is a hobby it can't be serious or
dangerous. You'd think that he doesn't know that situations can change
very quickly. And Jim thinks that just because he never had an interest
in CW that he could possibly ever have a need to use it under any
circumstnces.

Nor have thgey since the introduction of factory built units. So you
then believe that there is never a need for a ham to be able to build
anything at all. Very curious. If you had your way, nothing not on the
leding edge would be allowed to remain in existance. You come across as
the most zealous of zealots.

It's nice if they do
> but it is not necessary just as it was not necessary for you to build

Your comparison is without merit. Building a vacuum tube and
constructing a working radio of discrete componants are light years
apart.

Ah, so you believe that no ham should be required to fill any function
other than the most important one. We see. Whatta concept.

Cecil the Lame scores again with a slap shot to the audience.
I already have far more vacuum tubes I could expect to use any any
conceivable circumstances. What hams need is some of the expertise to
use thosetubes and also some transistors to build a working radio set.
Transmitter and receiver. I was looking at a 50's CQ magazine articlethe
other day where a ham built a small transciever for working 540 and 80
meter CW. It had a VFO builtin and a Superheterodye receiver. It used
four vacuum tubes. I was impressed.
You couldn't do that with four transistors.

How much bonus money is the ARRL Board paying you for you to imply something to the readers by making a statement like that? For the Board to say they are not going to propose eliminating code, but they won't oppose a change, is the same thing.
That's like saying: we're not going to set the building on fire, but if one starts, we'll let it burn.

It's either the sin of commission or the sin of omission. I guess the ARRL will get what it wants, to dumb down amateur radio further. This time it won't have to lift a finger to do it. They can come out looking like the good-guy. Thank Ed, checks in the mail.

Hey, Cecil, I saw this in a local paper today and, for some reason, immediately thought of you.

A 24 year old Marshville (NC) man
was charged April 8th with shoplifting
and disorderly conduct. <name withheld>
entered a Conway convenience store and
attempted to purchase an alcoholic
beverage. When the clerk refused to
sell (due to a ban on Sunday alcohol
sales), the man berated the clerk,
threw money on the counter and left
with the alcohol anyway. The clerk
called police with a description of the
vehicle. Due to the encouragement of
a female companion who was waiting in
the car, however, <name withheld>
shortly reentered the store and put the
alcohol back on the counter. Police
arrived a few minutes later to arrest
the suspect. The suspect was released
without bail on a notice to appear
citation.

It appears you're not the only person who feels he has inalienable right to buy alcohol on Sunday? However, you can bet your sweet bippie that <name withheld> won't try to exercise that right in exactly the same way again.

Hey, no need to ever apologize for talking about radio with me - I truly enjoy the subject. However, I haven't been too involved with CB over the last few years. In fact, all I have right now is the obligatory, but rarely used, CB radio in my SUV. All other equipment has been put away except for the antenna outside the house (which I use for shortwave and scanner reception at the moment - an Antron makes a good antenna for this). But, I did have a blast with CB years ago and do plan to get involved again one day. Take care, Bert.

>
> [snip] Me thinks in the scope of radio
> enforcement, any half baked attorney
> would clean the clock of a local cop who
> couldn't show the required knowledge. [snip]

What "required knowledge," Bill? A cop doesn't have to be an expert to recognize and gather evidence. For example, a cop doesn't have to be a gun expert to pick up stray bullets or shell casings off the ground for evidence. Or a gun expert to recognize a sawed off shotgun. Or a medical expert to recognize an injury has occurred. Or a alcohol expert to recognize the intoxicated. Or a drug expert to recognize illegal drugs. Or an electronics expert to recognize what a television is before deciding it is stolen. And the same with almost everything else the cop does.

In whatever situation, all the cop has to have is enough knowledge to do his job, which is to gather evidence properly or perform whatever test is available properly. If expert testimony is needed, again that usually comes from outside law enforcement circles.

And there is no reason to believe that it will be any different when it comes to enforcing CB regulations. The only skills a cop will need is the ability to recognize an illegal device and gather it for evidence. And, as I've already said in another message, it does not take great skill or knowledge to do that. If expert evidence is needed, that can be obtained by having the device tested by an expert after it is collected from the scene. And, in most cases, that expert will not even have to show up in court - his report will stand unless challenged.

Oh, come on, guys (Ed, Richard, Larry, Cecil, and Dick). Read the darn subject line. When Jim said to that "we need to eliminate code entirely," he was obviously addressing the subject (code testing). He even mentioned "classifications based upon code speed," which is a testing issue having little to do with people using code on the radio. And he is right - when it comes to code testing, code probably should be a thing of the past.

Don't you love these guys that sign their artwork? Can't fault a guy for voicing his opinion, that's how we all learn, but Jeez, have the balls to admit who you are!

I wonder what suggestion or implementation all the folks that love to bash the new rules came up with as a solution to the problem of declining participants. I don't think I've ever read any on the groups. I guess they're too busy protecting their turf. Maybe a ham boot camp that includes PT, engineering, 25 wpm code, demerits, cigarette smoking, etc., all on the prospect's nickel.

I propose a new class of license, the "LORD" Class. Just be able to have a closed mind, no solutions, pass the old advanced test, be able to work at a minimum of 25 wpm and you will have "Lord" privileges. You can do what you please, say what you please, buy what you please, go as fast as you please and not be required to help anyone or anything - ever! Your word will be treated as scripture and all will bow at your presence! Having any ticket less that Lord Class will tag you as incompetent (with a Good Buddy armband requirement), give restaurant owners the right to not serve you and dogs permission to bite you.

I'm not saying that the rule changes were good or bad, we'll all admit the overall abilities of the older hams are far above many of the new folks, but did any of you good ol boys ever think that by relaxing the code requirements, interest in the hobby would increase? How many folks have gotten their tickets under the new rules and advanced themselves because of a greater desire to participate? Come on, raise your hands! I don't feel anyone thinks less of you because of the new rules, but I can tell you that I fully respect the knowledge and talent you have, which is far above mine. At this point I can't keep up with your conversations, but you know what? One day I will. How about that? the "new" rules may have given birth to "fans"!

>I can't be responsible for your refusal to read in detail all the NCI
>postings of the past few years.

I have read most of them in detail, Dick, and those that I have read have been very clear that NCI does not oppose the use of Morse code on the ham bands. Can you provide references to those posts "by NCI" that state otherwise?

> You're the guy who just can't believe that the question pool exams can't be
> passed without learning all the detailed material ...

I am the guy who believes that it is possible for someone to memorize 1000 questions without learning anything, but that most hams do what I did when I got my General -- a combination of learning, memorizing, lucky guessing and just plain hoping that some questions are not on the exam. I have posted this view a number of times. Did you miss them, or are you making up an "interpretation" of what I said to bolster your point?

>and many study guides show only the barest minimum of information,

The most popular study guides are the ones that give explanations for why the correct answers are correct.

Maybe the study guide for the General should be reduced to 16 pages like it was in 1964... Instead of those "barest minimum" pages, we now have a Tech study guide of over 200 pages...

> and a number of posters here have stated cagorically that they
> passed the tests 'studying' exactly that way.

"A number?" I don't think that "a number" of posters has discussed what methods they used to pass their tests, and of those that have, I can think of only two who claimed that they didn't learn anything, and one of those was talking about his General back in the 50s. Of the rest, most seem to fall into my category of having learned/memorized/guessed.

>You are deliberately turning your back to the realities of the
>situation

I am deliberately disagreeing with you, Dick.

>That sets prececent for your attitude toward NCI and their
>goals.

I am not a member of NCI. ARRL could care less what organizations I belong to, as long as I do my job.

I operate a fair amount in the lower portion of the HF bands, Dick, and I haven't heard this mode war. Can you provide some examples of when and where it occured? What did Cecil miss on the air?

>> Tube therey should be part of the basics today?
>> Why?

> For the same reason that Morse code should be.

Do you really believe that Morse code testing and the testing about tube theory should be on the same par? If so, do you want to include enough tube theory that people need to spend dozens, if not more, hours to learn it and that they have to answer 7 of the 10 questions about this theory correctly or they don't pass, or do you want to revise the Morse code testing so it can be passed after an hour or two of study and if the applicant gets all the questions wrong, he or she will still pass if the overall score is >75%?

Uh, oh, this is devolving to gratuitous insult. ..

>What hams need is some of the expertise to
>use thosetubes and also some transistors to build a working radio set.

The 16 pages I studied to pass my General in 1964 did not give me the expertise to build a working radio set. Neither did the Extra I passed in the 70s. Why are you asking that hams today have to achieve more than you or I did? I think I turned out okay after studying 16 pages to get all amateur privleges.

>I was looking at a 50's CQ magazine articlethe
>other day where a ham built a small transciever for working 540 and 80
>meter CW. It had a VFO builtin and a Superheterodye receiver. It used
>four vacuum tubes. I was impressed.

In the 1950s, only a small percentage of hams could have designed that and they could not have designed that on the basis of having passed their Extra Class exam. They learned more electronics than was on the exam, either professionally, or as a result of what they did within Amateur Radio.

>You couldn't do that with four transistors.

You could do that with one IC... And, like the simple construction projects of today, that 4-device circuit was the exception that disproved the rule.

And you know this how? I could not have built a station from scratch as a result of passing the tests I took in the 60s to get my license. I needed a bit of trial and error.

And today, it is lots easier than it was then to build equipment.

The real fallacy in this 5-miles-to-school scenario is that most "old time" hams built their own equipment. They owned Hallicrafters or Johnson commercial gear, for the most part. Those that did build probably built a Heathkit (connect the red wire to pin 3; there are three wires on that pin now; solder them).

>other than the most important one. We see. Whatta concept.

Hams are not required to fulfill any function, Dick. To require a ham to do emergency communications (or practice thereof) would require a rule that stipulates that a ham must conduct N hours of emergency communication within his or her license term. To require a ham be able to build would require a rule that stipulates certain construction achievements. Those requirements have never existed in the US, to my knowledge, nor have the tests of any era I have direct knowlege of tested the ability of the applicant to do the type of construction you are discussing.

Here in NJ, in Bergen County and a few other surrounding counties, not only the cell phones were out during Floyd, but landline as well.

A major control point for the phone company was under water. You could only make landline calls within your local switch's area. There was NO linking between central offices.

Stayed that way for a few days.

As noted in other posts about CPR, well, CPR does save more lives and does it on a day-to-day basis.

I just happen to own a company that teaches CPR and the use of defibrillators to the general public, corporations, organizations and to anywhere where people tend to gather.

Considering most state laws require reporting and medical oversight everytime an automatic external defibrillator (AED) is used, we have already seen our students save lives.

What's probably better is to have an adult conversation about code vs. no-code, cut the personal attacks out except for emailing each other directly, and yes, learn CPR as well. While you're at it, learn how to use an AED along with the CPR.

For every minute that passes from the time cardiac arrest starts, approximately 7-10 percent of survivability is lost (AHA statistic).

Yes. Problem being that they don't do it often enough to impress the
horde. They spanked one last week to the tune of $13,500 and yesterday
there were a half dozen of 'em in the 10m cw segement. Getting whacked

by the FCC is statistically a very low risk wherein lies the ineffectiveness of the rare spankings. Bang ten of 'em a week and maybe . . .

>them as they still work their illicit activities.

For the most part, freebander activities are of litle
consequence to legitamate hams...as long as that
freebanding stays out of the ham bands. Presumably,
the freebanding is in that "no man's land" of spectrum
that seems to have no stated users at all.

I have posted this before...the best counter to
freebanding is to give the "freeband" back to
hams and then the hams will be proactive
users and monitors of any illegal activity which
can be then passed on (reports, data, audio tapes)
to the FCC for enforcement.

If the freebanders just operate in the freeband space, who
really cares? That's no different than me not worrying
if somebody is speeding on a deserted highway.

Cheers,
Bill K2UNK

Passing the General theory test in 1957/58 didn't
require much different either. Memorization and
the ability to solve a few basic algebra formulas
(without knowing the theory that established the
formula) was all it took for a teenager.

> You are deliberately turning your back to the realities of the

Yes Dick, that great conspiracy is there. Hey,
we all are part of the one world government movement too,
and then there's the secret society of the bell, and
there's also the (insert name of any paranoid
belief).

Cheers,
Bill K2UNK

Yep, and during that outage, the use of VHF FM
served the day quite well. The outages were very localized
since the typical telco central office in NJ probably covers a
radius of 10-20 miles at most...and often considerable
less. Throughout the outages, there were many
VHF repeaters active and in use for emergency comms.

As I said, I frankly don't remember the reason but it seemed entirely
inappropriate and trivial at the time, to me. Maybe they were trying to

Having been in the Armed Forces somehow makes it "OK" to be guttermouthed?

>Nursie has to show actual, real quotes of the above "liberal use of
>profanity." Emphasis on liberal.

Above quote deeply appreciated to make point. Thanks, Lennie.

>[you are unaffected by criticsm but the word is "ineffective," nursie]

Bored again, I see, Lennie. Must be rough, having all those great retirement options, only to spend them parked in front of the CRT looking for opportunities to elevate yourself.

Nice try.

>Nursie consistently writes on amatuer radio. Tsk, tsk, tsk.

Again, I see. No "argument" to the context of the comments. Not that I expect any. You have not been able to defend your positions on other topics, I doubt to see anything meaningful in the future.

>Nursie uses this word a great deal. It is a not-nice word of
>Yiddish equivalent to the colloquial American "dickhead."

Really? I wasn't aware of that particular definition. Interesting how everything in nature finds it's own level, though.

>Test element 1 for a US amateur radio license examination is
>still code testing, still required for a General or Extra class
>license.

Yep, and still the MINIMUM the FCC determined from PUBLIC opinion on what would be appropropriate until the treaty is ammended.

You are STILL trying to act as though this is an issue put thre by the FCC just to taunt you. The FCC has made it clear that it's hands are tied to the treaty. The present code test fulfills both the spirit and the letter of the law.

Phil Kane have very effectively explained to you that a treaty ratified by the United States IS US law.

>Firstly, the "fact" is nothing of the kind. It is just a supposition
>by nursie and one or two others in here

"Supposition" or not, this has been addressed by moe than one FCC official at one time or another and it has been made clear that the FCC is tired of this argument. They WILL eliminate the test after the treaty is allowed.

>Secondly, the FCC has said nothing about "dispensing with a
>code test in the future." The FCC said only that, in 1990 and
>1999, that the code test is not considered of sufficient value
>for the FCC's purpose of licensing amateurs as part of its
>amateur radio regulation task.

You ahve nnot been paying attention to anything except what YOU want to hear. I don't necessarily want code testing to completely go away, but even
>>I<< can hear the FCC loud and clear.

What's YOUR problem, Oh Lifeless One?

>Thirdly, the current ITU-R WRC agendas for the whole
>conference in 2003 and the preliminary conference in 2002
>have nothing about S25.5 (commonly and mistakenly
>called "the treaty") alteration, modification, or changing.

Again, Lennie has NOT been paying attention, but that's OK, we accept his oversights.

And there is NOTHING "mistaken" about calling it "the treaty". S25.5 IS part and parcel of overall ITU regulations which ARE themselves part of international treaties to which the United States is signatory.

Perhaps Phil can spend some more time on the intracacies of the United States' legal obligations to you in an 8th-grade level YOU can understand?

>Note: Only S25, the entire body of ITU-R amateur radio
>simplified standards is indicated as being an assignement
>of Study Group 8.

Of which S25.5 is a hotly discussed and important topic to most administrations.

>Nursie should do something about those multiple personalities.

Nothing "multiple" about accepting you as a fool, Lennie.

>Well now, nursie does admit to her obsession. There is always
>optimism for a cure when the patient recognizes her disorder.

Now what can we do to get you to admit yours?

>Actually, not as much as claimed. US radio spectrum allocations
>go from 9 KHz on up to 300 GHz.

And any Amateur allocations still provide me (and most other Radio Amateurs) with somewhere in the "high-90's" of a percent MORE spectrum RIGHT NOW than YOU could use today, Lennie, when one adds up Part 15 and Part 95

subparts that you are "authorized" to use.

>The "basement of RF" is ELF ....

In which we MAY find Lennie at 1750 meters.

>"Daylight" could be roughly 1000 nanometers (actually the IR
>component of daylight) at a frequency of about 300 THz.

On the other end, he may add a modulator to a laser pen for
"point-to-point" communications.

>Several have wondered if nursie has seen any daylight.

Just you and Hans...And I still wonder about this since NO ONE has ever
seen the two of you in the same room...Hmmmmmm?!?!?!

>There has never been any "refusal to get a license." That is in
>nursie's vivid out-of-body imagination working overtime.

Leonard H. Anderson is again lying.

>My discussion, when not spent 95% refuting nursie's erroneous
>and false charges, is about the elimination of the code test for
>an amateur radio license.

I am not making any "claims". And if it WEREN'T true, why would you have
to TRY and refute ANYTHING, Lennie? The archives of USENET would have long ago
borne you out.

They haven't.

>Also, nursie's list of radio services useable without an amateur
>radio license is woefully inadequate.

An Amateur Radio license is only good in the Amatuer Radio Service.

>All of broadcasting,
>private land mobile radio, aviation radio service, several fixed
>land radio services do not require a license to operate...just
>for starters.

YOU cannot operate a radio station in ANY service (Parts 15 and 95
notwithstanding) without a STATION license. That station license will specify
which discreet channel(s), mode and power levels you may operate that station
at. YOUR commercial license says so, right on the back.

UNLESS, od course, you can make a valid argument as to why the FCC is
WRONG...?!?!

>My advocacy in here is to eliminate the amateur radio code test. The TEST.

Yep. And the FCC has already made written policy for short term retention
of the code TEST, and has stated their intentions, both in formal comments and
personal "asides" of Commission officers and members.

It's over with, Lennie. You can pontificate about how you are avenging the weak and downtrodden ALL YOU WANT, but to what avail?

Lennie, PLEASE seek help. Reams of facts and ACTIONS by numerous agencies and organizations prove that you are the proverbial "day late and a dollar short" on almost daily basis, yet you STILL keep trying to ram those windmills.

Help. Lennie...SEEK HELP!

Commercial gear has been available since at least the
1930s. Since that time (70+ years) it is absolutely
true that a ham might never need to be able to build
anything. The issue isn't the choice to build, Cecil doesn't
oppose that at all. Cecil merely notes that today, for
most hams, building there own is NOT a choice. In
the 50s and 60s, we could "build our own" and save money
because parts were available from junked TVs, old military
surplus, etc. Them days are over.
>

>> knowledge goes down. That's the truism of technical progress.
>
>Nonsense. The stuff builds itself?

The engineers build it...the same as they do for
TVs, VCRs, Stereos, etc. The same advances that
make commercial rigs so much more attractive today
are what killed Eico, Heathkit, Knightkit and others.

Do you know ANYONE that builds there own VCRs,
TVs, Stereos, etc? All were, in the best, routinely
homebrewed (except, of course VCRs).

If you can read you already know but prefer to avoid it. It can be a
bit unpleasant to reach disturbing conclusions from all the small tips
and hints that aggregate into a clear 'position'. Such smokescreening is
done routinely, in fact little in politics is done otherwise. I suppose
ham radio is different, though. Right.

That was the prevailing attitude of most hams-until the illegals DID begin infringing on the ham bands. And now easy ham radio licenses brings them on into ham radio, to use their callsign or not, as whim and who is on the other end of the instant QSO dictates.

>
> I have posted this before...the best counter to
> freebanding is to give the "freeband" back to
> hams and then the hams will be proactive

Uh, the 'freeband' never did belong to ham radio, none of it is within international allocations (the freebsand is wherever in the specrum participants want it to be), and even if that could be done, FCC would no more be able to police it than it now is. That's a solution?

> If the freebanders just operate in the freeband space, who
> really cares? That's no different than me not worrying
> if somebody is speeding on a deserted highway.

That's the attitude that has allowed that sctivity to expans so enormously.

Dwight,

Thanks for the clarification. I did not intend for code to be abolished.
Code is just another mode for which there should be no specific testing.
After all, there is no testing for packet.

-jim

Dwight Stewart says:

>It appears you're not the only person who feels he has inalienable
>right to buy alcohol on Sunday?

Why does anyone have a problem with Cecil buy beer on Sunday? What
is different about having a tall cool one on Sunday as opposed to any
other day of the week?

The police have enough work to keep them busy regulating automobile
traffic, preventing robberies and crimes of violence and helping
lost children and little old ladies find their way home. As long
as the police confine themselves to such activities they are respected
friends of the public. But as soon as they begin inquiring into people's private
morals or enforcing blue laws, they become nothing more than
armed clergymen.

Steve Robeson LPN in a fit of patriotic fervor exclaimed:

>"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Due to lack of hostile targets in peacetime, preparation for war can consist of vectoring allied fighters to shoot down missionary planes, and sinking fishing boats full of schoolchildren.

In a sudden fit of awareness of his surroundings, Dick Carroll blurted out:

> Do you really believe that none of the anticoders would dump code
> from ham radio instantly if they just had the opportunity?

> But the drive to abolish mode allocations in the HF
> bands, should it ever come to fruition, might change
> that opportunity.

Since CW is allowed virtually everywhere (no other mode enjoys
that status in the US) and is the second most popular mode of
operation on HF, your premise that Morse might be banned not only
lacks credibility -- it is outright laughable!

I don't doubt that some whacko might propose such a ban, but
only a complete paranoid would take the idea seriously.

>w3rv

That's right.

First the ARRL goes ahead and takes away space because they wanted incentive licensing. That's OK, we should have some goals for advancement! Everyone got used to that.

Second, the FCC changes testing. Now the same tests are easier to pass. That's OK, it's the trend of the world. But clearly the Extra class is not really "extra" any longer.

Finally, the FCC takes space and effort away by allowing everone to have what amounts to an automatic upgrade. Holders of ALL classes of tickets with more than a "crude test" of 13 wpm are cheated by allowing people to have the same privledges with less effort.

Of course they did that mostly as a result of Kenwood and the no-work people.

Now the ARRL, in spite of overwhelming response that says keep CW, decides they just won't say anything if someone wants to remove CW requirements.

What a bunch of money grabbing fools. Radio isn't dying because of CW, or testing. Radio is dying because no one has the time or wants to make the effort to learn anything. It is no longer magic to sit in a room and talk to people half-way around the world. There is little time or incentive to build things, and anyone who does like to build things can learn more on internet than they ever can on the ham bands.

Ham radio is dying because the world has changed, not because of CW. It will not live no matter what is done, because people aren't all that interested.

All this no-code stuff does is screw up the time we have left, by moving amateur radio towards CB. Hell, CB even died way off. Why would anyone thing Ham radio should be any better at surviving the changes in society?

The (in)famous 8 and 12 foot limits come from the BOCA and UBC for
roof-mounted antennas not requiring a full analysis/building permit.

BOCA/UBC = "safety" standards, not "zoning" regulations, and
therefore give the municipalities a lot more wriggle room,
preemption nothwithstanding.

The last one that I find in the comm law digest is when the
FCC proposed giving more of the joint ISM-amateur shared bands to
the non-licensed Part 15 bunch, and the ARRL filed suit in the DC
Circuit (U S Court of Appeals for the District of Columbia Circuit)
for an immediate stay preventing the FCC's decision from going into
effect (and the wireless industry flooding the market with gadgets),
pending the results of further interference studies which were
underway. Just as happened with the earlier Petition for
Reconsideration, "The Fix Was In" and the court felt that there was
no need for an immediate stay. Score: Goldberg 2, Imlay 0.

And what if quasi-marine style "Rambo" cop decides to confiscate my legal IC706 because he is convinced that I am the "CBer" causing the interference to the complainant? You see, Dwight, I know of cops like that around here. Once they strap on a gun and a badge, they think their sh** don't stink, they are right regardless, and a citizen is always wrong. Have you ever tried to explain something to one of THOSE kinds of cops, Dwight? Have you ever been told, "You better shut up, boy, or you'll go to jail"? Even though you were RIGHT, and KNEW it, and only got out, "But, sir, I.....", you ever been yelled at by a Rambo cop even when you had done nothing wrong? What happens when you pull out a license that is SUPPOSED to end the episode, and, not amenable to having his "authority" challenged, he ignores your attempts to explain?

I had one incident where I was able to humiliate an NC Highway Patrolman and was damn glad to do it. I, as a member of CAP, was called to respond to the crash of a light Cessna many years ago. Appointed as temporary Incident Commander by the state authorities, I arrived with two primary duties. One was to secure the area from spectators for the NTSB, the other was to silence the ELT. I arrived just a few minutes after the pilot had been taken away, and drove up to find an NCHP trooper snapping out orders to get spectators to move their cars--which was great. Resplendent in his black and grey uniform, Smokey Bear hat, and the requisite flight sunglasses, he was the epitome of military spit and polish.

I drove up, got out of the car and approached the twisted wreck to locate and silence the ELT. Upon noticing me approaching the craft, he

whirled, and yelled, "Just what th' HELL do you think YOU'RE doin'? GET OUT OF THERE---NOW!" I stopped and waited as he marched quickly over to me. I introduced myself, started to explain why I was there, "I have orders to......." "I DON'T GIVE A DAMN WHO YOU ARE, YOU LEAVE THE AREA RIGHT NOW OR I WILL ARREST YOU"----in spite of the fact that I was in uniform which should have told him I wasn't just a curious bystander. I returned to the vehicle, got on the HF radio and informed the NC Wing Emergency Services Officer that the trooper had ordered me away. Col. Reese told me to stand by just a minute. He phoned the NCHP HQ in Raleigh. As the trooper once again approached, likely to tell me to drive away. his outside speaker blared, "F741, this is Salisbury." He went to answer. Not knowing what the message was, the speaker once again blared out loudly, "F741, you have a uniformed Civil Air Patrol officer on scene, right?" (answer not known) "TROOPER xxxxxxx, YOU WILL COOPERATE WITH ANY AND ALL CAP MEMBERS ON SCENE AND FOLLOW ANY REASONABLE REQUESTS THEY MIGHT HAVE, IS THAT UNDERSTOOD?!" All this before the civilians he was threatening a few moments before! A much chastened and angry trooper emerged from his car--to the giggles and smirks of those who had witnessed his overbearing and unprofessional conduct towards me. He stared daggers at me during the whole time he was on scene, but never gave me further grief. I just smirked at him every chance I got.

THAT is the kind of officer I am talking about: the one who THINKS he knows it all and the kind that some hapless ham is going to run into someday IF local LEOS do, in fact, enforce regulations. That is what I have always objected to about the local enforcement thing. Most cops are decent, hard working, down to earth people. But there are those who think they can do no wrong.

And *IF* it should happen to me, there will be a lawsuit--guaranteed--if it costs me thousands!

3567. Riley says 40M may be cut - restructuring a stroke of brilliance

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-23 17:32:23 UTC
From: w2dne@ziplip.com
Message-ID: <200104231732.f3NHWLt27956@mail.mailgate.org>
Source record: 7917

Pleasant Hills, PA, 14 April 2001 -- The FCC Enforcement Bureau's Special Counsel for Amateur Radio, Riley Hollingsworth K4ZDH, spoke for over 45 minutes to a crowd of over 50 Amateur Radio operators at the Blue Flame restaurant on Route 51 this morning. It was one of two talks he was scheduled to give today in the Pittsburgh area, the second being that evening in Monroeville at the Palace Inn hotel.

Hollingsworth covered a wide variety of topics involving the FCC and the Amateur Radio Service, covering enforcement issues, possible International regulatory changes, and some of his views for the future of the Amateur service.

He emphasized several times the importance of "how we sound on the air" both domestically and internationally, and how critical that was at upcoming ITU conferences with other countries - conferences where the rule was, large or small, that "one county(has) one vote -- just like we do." He warned the crowd that there was a good chance that the 40 Meter Amateur band would be reduced by 1/3 (from 300 to 200 kHz wide) at the next World Administrative Radio Conference, and that it was very important that we conduct ourselves well on the air. "Operate as if the whole world is listening!"

On cases of interference and other enforcement issues,
Hollingsworth emphasized the need for vigilance against the "proliferation of all that junk out there," citing some specific cases.

He urged amateurs to "hear it, document it, and notify the FCC," and that while it may take 3 to 5 years to get back up to full enforcement levels of years past, enforcement IS back but we should not become complacent about it. He also reminded the audience that enforcement alone won't save Amateur Radio, as "there is no rule against being stupid" on the air.

Hollingsworth compared the existing Amateur Radio spectrum to New York's Central Park, reminding the audience that it was "worth billions" and would become a target if the Amateur service did not manage itself properly. He pointed out that the new demands for spectrum today compared to as little as 15 years ago, and emphasized the need for the Amateur Radio community to have a strong National voice and presence - and that the American Radio Relay League is all we have.

Hollingsworth also discussed briefly the growing problem of restrictive zoning, deeds and covenants, mentioning some of the "horror stories" that the FCC had heard about CC&R's only disclosed at the closing or settlement, when it was too late for the home buyer to do anything about it. And he brought up some recent legislation in Texas that would have essentially prohibited all towers (including Amateur) over 25 feet high throughout the state, that the ARRL was able to resolve in our favor. He emphasized that the FCC would only take action to strengthen PRB-1 over deed restrictions if the Amateur community continued to provide the FCC with factual information and insist that action be taken.

Hollingsworth also had praise for the Amateur community in their efforts to innovate new communications techniques, specifically mentioning the new digital PSK-31 mode as

something "amazing" and a "big draw for people." He urged the audience to "spark your own enthusiasm" on this and other new communication modes.

"Amateur Radio is at a crossroads right now," and Hollingsworth added that with the convergence of computer and radio technology, we have "the greatest potential" to grow in the last 20 to 25 years.

He pointed out that while it was important to try and draw younger people into the Service, we should remember that Amateur Radio appeals to all age groups. He also urged the Amateur community to continue to train and educate incoming amateurs, stating that "we have a duty to teach new operators everything we know."
But he also urged us to "stay away from the negative operators" and to not "give them a safe harbor "as the survival of Amateur Radio was at stake. "Negative operators need to learn that Amateur Radio is not the training ground for "the next Jerry Springer," and that with the technology now available to the FCC monitoring stations (despite the closing of many local field offices) that they "can and will be caught, sooner or later."

He also urged Amateurs to get more publicity out about themselves and what they do, stating that "we're not equipped to give ourselves credit." He cited the publicity following recent pirate attacks on shipping in the Caribbean as an example of what we should be doing, and singling out ABC's "20/20" program for getting the story right - "the best publicity we've had in 20 years." But the lack of publicity of the importance of Amateur Radio to the Hurricane Watch and other events of that scope is something we need to do more about.

On the matter of the Amateur Service restructuring, Hollingsworth emphasized that it was "done" and that we would look back on this at the end of the decade as a "stroke of brilliance." He also pointed out that a side effect has been an upswing in the use by Amateurs of Morse Code communication. More Amateurs are turning or returning to the mode since higher speeds are no longer mandated, citing the analogy "the best way to kill a good book is to put it on the required reading list." He felt that this showed that it wasn't the code speed that was important, but the code itself.

Hollingsworth also touched briefly on the positive relationship that the ARRL President is developing with the FCC commissioners, and that the ARRL and that the ARRL will be giving a presentation and demonstration to the FCC Commissioners once all of the new members have been seated. He brought up that FCC Chairman Powell is very enthusiastic and thinks very positively of the Amateur service. But he also brought up that without Senator Barry Goldwater or FCC Commissioner Lee in Washington any more, we have "no built in safety mechanism" or "insurance policy" and that it is up to us. He also discussed the ARRL's upcoming Big Project to try and put an Amateur station in every elementary school in the country, and the great potential that AMSAT-OSCAR 40 will present to us, even with all of it's problems.

He concluded by reminding everyone present that we need to realize "what a great gift (Amateur Radio) is," but that like any great gifts, it comes with great responsibilities too.

Yeah, I know--let's just grow our hair long, move to Haiut (sic) Asbury, play guitars, have love-ins. Let's just get rid of all our defensive weapons and EVERYBODY in the world will join us in peace. Typical drippy-hippy, leftist tripe. It is that very preparation for war that prevents it. And no one goes out and practices on innocent civilians. At least not the Western nations.

And anyone not prepared to fight for freedon must be prepared to LOSE it. I don't know whose that is--it just seemed appropriate.

Yup,

Dick and I exchanged a couple emails about this very thing. The trouble is that when you mix in a group of "dominant" personalities, this case gay scoutmasters or older scouts who are gay, the young ones are vulnerable due tho the fact that at the ages of 11-13, they are awakening to a whole new set of changes in their bodies and minds. They are curious, eager for information, and even confused about the things that are happening to them. So if a "gay" person (still like the original terms like queer, fag, fairy, etc, because they fit better) kinda brings up the subject of sex to the younger ones, it is possible to lead them into something they are not equipped to deal with--which is why there are age of consent laws. The older Scouts are more settled and not as impressionable--and they are bigger so they can whup hell outta someone that tries that! LOL!

It has always made me wonder why the queers are so all-fired bent on getting into Scouts by and while rubbing their lifestyle in our faces. They already CAN participate in Scouts! All they gotta do is join, do the activities, keep quiet about their sexual prefs., and keep their hands to themselves. But can they DO that? I would rather deny the privilege to one group in order to protect our most precious resource: our kids. Better safe than sorry sounds about right.

Jerry Oxendine says:

> And no one goes out and practices on innocent civilians.
> At least not the Western nations.

Over the weekend, US and Peruvian warplanes cooperated in shooting down an unarmed missionary flight, killing Veronica Bowers, KD4CKM and her infant daughter, while practicing interception techniques.

A few weeks ago a US warship sank a Japanese fishing boat, killing 9, including schoolchildren, while practicing surfacing their boat.

Last I checked, both the US and Peru were "Western nations".

Good luck on this one now.

Additionally, very few hams actually DESIGNED and
built their own station equipment. Most of us that
did any homebrew usually followed a construction
article from the pages of the ARRL handbook,
QST, CQ magazine, Pop. Electronics and/or others.
It was much more of a "kit" project except instead
of Heathkit gathering all the components and providing
all the predrilled/punched/labeled hardware we did it
ourselves.

>interest.

Except for very limited application (e.g. power amps), what
is any other use of tubes in amateur radio today?
There is not a single tube regularly in use in any ham or consumer
electronics I have in my home. I have two antique ham
recievers that have tubes...but they are not in any
daily use at all. The reality is that my ancient S-20R
reciever is just used for AM broadcast when I am in
my garage.

>There are millions of electron tubes in existance, and many
>hams still use tube type gear, some of which is hybridized such that the
>drive and final amplifier stages are tube type.

IF any ham wants to use tube equipment, that's fine, but
that doesn't make it a required subject area for all hams.
Power amps maybe, but that'd be a strech too as many
of the under 300 watt units are also solid state today.

>Othere still use gear
>based on vacuum tubes, and many still build simple tube type ham gear
>for use on the ham bands.

Godd for them. That is "live in the past" technology.
Why anyone builds tube equipment today that can
just as easily be done with solid state defies logic.

>All news to you, isnt' it?

Not at all. I just disagree with the need for ALL hams
to be tested on archaic technology. The fact that it is
used by some hams doesn't change the fact that it
is obsolete (stand by for Vinnie B diatribe :-)

> The point is clear: Just because more efficient technologies have taken
>over the mainstream of communications in no invalidates the usefulness
>of the eariler technilogies still in existance. When they become as hard

>to find as a wireline telegraph installation, then it might be time to
>write them off completely.

No one is asking you or anyone else to write-off
the technology IF you like it. The issue is valid
licensing requirements. Just how much tube
technology do you think technician and/or EE
students get these days?

I had over 100 tubes, many brand new. I donated
them all to a fellow employee that is heavy into
antique radios. He was very pleased.

>What hams need is some of the expertise to

>You couldn't do that with four transistors.

One reason that 4 tubes cut it was because the later tubes
were often two or even three tubes in one tube envelope.
Could you replace one dual triode with one transistor...
not at all, but you can often replace multiple tubes/transistors with
one IC chip.

How could we even "dump" code at all? Do you
believe that code, as a mode, would ever be "outlawed"
at the international level? much less by the FCC?

>So it makes much more sense to just be congenial and say "We really
>don't care if you use it.." knowing full well there's nothing they can
>do about it - now. But the drive to abolish mode allocations in the HF

Without passing judgement on the 8' limit,
the fact remains that you can engage in
very credible communications with antennae
that fits in that 8' limit. I have worked Europe, Hawaii
and others with just a 10m dipole INSIDE my attic.

Cheers,

>be a gun expert to pick up stray bullets or shell casings off the
>ground for evidence.

True, but then you had better have a ballistics
expert testify as to the meaning of what was found.

>Or a gun expert to recognize a sawed off shotgun.

An obvious situation for anyone. Bad example.

>Or a medical expert to recognize an injury has occurred. Or
>a alcohol expert to recognize the intoxicated.

Actually, the police are quizzed extensively on DWI
testing and lose caes where proper procedures are
not followed.

>Or a drug expert to
>recognize illegal drugs.

If I hand pills to a cop, how does s/he tell if they are
legal medications (prescription or over the counter)
or if they are illicit drugs. It takes an expert analysis
to testify as to what something (drugs) actually is.

>Or an electronics expert to recognize what a
>television is before deciding it is stolen.

Actually, unless it can be identified by some particular
aspect, such proof is not as easy as it might appear.

>And the same with almost
>everything else the cop does.

Dream on.

> In whatever situation, all the cop has to have is enough knowledge
>to do his job, which is to gather evidence properly or perform
>whatever test is available properly.

If you don't think cops need to be qualified/certified
on certain technologies, you have much to learn.
Here in NJ, a cop needs to be trained and "certified"
to use and be able to testify as to the readings
obtained with a noise meter in cases involving nuisance
complaints due to noise.

> If expert testimony is needed,
>again that usually comes from outside law enforcement circles.

If the "measurment process is flawed" that taints
the evidence.

> And there is no reason to believe that it will be any different when
>it comes to enforcing CB regulations. The only skills a cop will need
>is the ability to recognize an illegal device and gather it for
>evidence.

PLEASE tell us how a cop can do that at all? There are
thousands of legal CB radios that can modified without
much difficulty and which, when modified,
show no external signs of being modified.

>And, as I've already said in another message, it does not
>take great skill or knowledge to do that. If expert evidence is
>needed, that can be obtained by having the device tested by an expert
>after it is collected from the scene. And, in most cases, that expert
>will not even have to show up in court - his report will stand unless challenged.

No attorney of any credibility will allow an expert witness
report stand on stipulation.

It could be. The FCC could consider making that "freeband"
spectrum a US ham band allowing limited power to avoid
interference to other services which are in other countries.

The question is: Just what and where is any legal use being
made of that "freeband" spectrum?

>> If the freebanders just operate in the freeband space, who

BULLSHIT! What technology? More details please.

The commission is running a bargain basement interferometer
system that they built in house, after stealing the plans from a
commercial outfit in California. It has never worked worth a shit and
is down more than it is up. They've never solved the problem of lightning
strikes. When it's up, the accuracy stinks. Their stupidity was in not
contracting out to have a superior system built. The piece of shit system
they built is a standard joke within private industry circles. The software
they're using was stolen from the U.S. Navy and was never intended to
be used with the hardware they stole. The commission has never solved
the software-hardware mismatch and never will. At an industry trade
show, I once heard the FCC system referred to as a "Chinese mattress
spring, held together with bubble gum and bailing wire."

Somebody was duped and wrote the following fairy tale:

and that with the technology now available to the FCC monitoring stations
(despite the closing of many local field offices) that they "can and will be
caught, sooner or later."

I can tell you why I don't believe Bill Clinton any longer; he lied and got caught at it several times.

It seems that your only reason for assuming that people are lying is that sometimes some people lie. I need more to call a person a liar, Dick, and I need more to be persuaded that someone is lying. "Might be so is" might be a good enough standard for you, but it is not good enough for me.

But thanks for the explanation of how you came to your conclusions. It does put things into a better perspective.

I agree, reaching "conclusions" from non-existant "small tips and hints" is
unpleasant, indeed. If you believe it to be unpleasant, why do you do it?

> Such smokescreening is done routinely, in fact little in politics is done
otherwise.

Most of the smokescreening I have seen in politics involves trying to
persuade people that there is some secret and nefarious agenda in place by
the opposing party. It is usually done with inuendo, rather than concrete
examples.

Can you offer more than a vague generalization that there are small tips and
hints that "prove" that Bill is lying when he tells us that NCI does not
have a secret agenda to eliminate Morse code use on the ham bands?

Well I would like to see you talk uhf/vhf with a 8' height restriction, can you do it yes barely, and only if you are into repeaters. Is it reasonable No Not at all.. I cannot even put up a R-7 in my backyard the size of the lot is 150' x 225' plenty of room . There is a Home depot within 200' of my front door the roof top is higher than my antennas are allowed, the local post office which is directly across the street, the flag pole is higher than any antenna I can have. A ham in our town got a variance for a 35' tower 2 months before I applied for my permit. The top of my house is 22' to the peak, so any other ham/ non-ham with a roof top of 35' in my town will at least have better coverage then me. Why should I have to use dipoles, and inferior compromise antennas Where is the reasonable accommodation. I have had legal counsel the ARRL's said they couldn't do anything, I have went to Superior Court to fight the planning boards desicion the judges discussion was for me to re- apply and the town was to consider Prb-1, which they knew about all along and did consider in the first place. But they felt the towns concerns out-weighed Prb-1. My antenna was labeled an attractive nuisance, an eyesore, among other things. I had spoken to Chris Imlay when this happened and he was going to try and help, but of course he did not. I just hope other hams don't run into this problem because when someone like me gets turned down they now have shot down the rest of us.

Bill, So am I stuck on 10 meters then?
Don't think I can fit a 80 meter dipole in my attic, nor 40 nor 20 I would like a beam antenna is that reasonable, perhaps I want a vertical antenna I cannot have one I don't live in a town house, or condo I live on a residential/commercial street in a rural type area, The light posts at the Post office across the street from my house are Higher than any antenna I can Have. You try to live in a town like this. Any Offers of help are appreciated.

Why you don't just put a small ball and pulley on the top of the antenna and call it a flagpole. What's their requirements for flagpoles?

I deal with over 400 police depts in NJ. I fix the traffic radar they use, the video cameras and the mobile data terminals(computers)most have no clue about electronics, nor the desire to learn about it They have a hard time figuring which brand radar they use what Band it transmits on etc, How in the world are they going to know about CB radios unless they take a training course and are well versed in CB's I just don't see that happening at this time there are many mor problems to solve ...

This is pretty much what hams are doing to day, too, only I believe that there are more of them now than then. I think the little Tuna Tin 2 kit sold over 800. I doubt that more than 800 people duplicated any particular project from the 50s and 60s.

Actually, you come across as the fascist - trying to force people to learn something for their own good. The need for a ham to be able to build anything comes from that ham as an act of freedom of choice. I know that you do NOT believe in freedom of choice, Dick, but freedom of choice is imminently appropriate in a hobby in a free society.

Building electronic equipment is NOT a requirement for hams. Some choose to build and some choose not to build. That is exactly as it should be. We don't need fascism in this country.

It is a big if to assume that NCI will someday set a policy that it wants to eliminate mode segments. With that big if in mind, do you think that they should have the right to ask the FCC for that rules change, or that they should be stopped somehow?

What end result do you envision to this thread?

Note that I didn't say anything about requiring hams to fulfill any function.
Dick is big on forcing hams to satisfy his idea of what a ham should be.

So the question to ask is: Is Dick taking the idea seriously?

I work 40m SSB splits, Dick, with the foreign hams transmitting in
the middle of the CW/data portion of the band. I haven't seen any
wars yet.

The foreign SSB ops in the US CW/data portion of of 40m have
been doing it for many, many years without any detectable chaos.

??? As good as it was built to be, of course.
Let's see now - you're saying that since no individual can readily build gear that competes with commercial gear, hams shouldn't need to build anything. Since they don't need to ever build anything, you agree with Cecil that there is no reason for hams to know anything about radio or electronics technology. So we are in the final analysis nothing but a bunch of CBers in your and NCI's view.

Then you admit that, contrary to your earlier prediction, freebanding is
not associated with restructuring and freebanders were there before
restructuring.

> Why do you almost never hear a CW QSO up in the phone portions, where
> they have always been completely legal?

Your question disproves your argument, Dick. CW is NOT prohibited from
the phone part of the band yet the gentlemen's agreement works there just
fine like it works just fine for foreign ham bands. You shot your own
argument down.

It this analogy were true, Cecil, one could argue that the FCC regs do not require a ham to even operate, so under the Cecil principle, no exams would need be given.

I don't think that many are going to buy that one, Cec'.

Really!!?? No wonder for most hams building is not a choice! Today they
don't learn enough to throw their own HF dipole together! So how the
devil would they ever begin go think about building a radio?

Hey Bruce, where are you? You had it right all along,"Without CW it's
Just CB"!
These clowns prove it more and more with every post.

It's hard to see how any ham could badly injure himself with his IC-706.
It is the responsibility of each individual ham to protect himself from
danger. One shouldn't climb a 100ft tower without a safety harness and I
didn't see a word about that on any of the amateur radio exams I have
ever taken (including the Extra). Please present the Q&A from any of
the exams that will ensure foolproof safety protection for hams.

Ham radio is simply not like falling 10k feet out of the sky. Anyone
who thinks ham radio is anywhere near as dangerous as piloting an
airplane is too far gone to reason with.

I know that. And I know that CW is very much used within the ARS. The same
logic holds. If code should be eliminated then so should horses for the
same reason.

One time there was a 19th century outlaw who killed a guy in Arkansas, stole
his horse, and fled to Texas. He was hanged in Texas for horse theft, not
for murder.

There was a special on Hitler's sex life on the History Channel a
few weeks ago. He drove his female cousin crazy with his perversions.

> Generalizations are dangerous. So is ignoring a large body of
> experience which shows trends that are dangerous. Many homosexual men
> are known to prey specifically on young boys. Should parents just ignore
> that fact since they are a minority of homosexual men?

A minority of men are murderers. Do you ignore them? Do you consider
every man a murderer until proven otherwise? There is an extreme
danger in collectivism. That has been proven over and over down
through history. When are we ever going to learn to protect ourselves
and our loved ones in general and judge each individual in particular?

Little girls are twice as likely to be molested by a heterosexual male
as little boys are likely to be molested by a homosexual male. Should
we not protect our little girls? A strange male is twice as likely to
be a molester of little girls as he is to be a molester of little boys.

Condemning all members of any group for the actions of some members of the
group is simply an evil thing to do. That is the basis for collectivisms
like racism and sexism.

However, private organizations should have the right to admit or reject
anyone they choose. If the Boy Scouts don't accept any public money,
they have the logical right to reject men with brown eyes if they so
choose. I know that's politically incorrect, but that's the way things
should be. It broadly comes under the heading of property rights.

3631. Roni L. Bower, KD4CKM, Silent key

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-24 00:53:41 UTC
From: Larry Klose <lklose@net-link.net>
Message-ID: <3ae4cedf$0$88190$bbae4d71@news.net-link.net>
Source record: 8031

Mrs. Roni L. Bower, KD4CKM, and infant daughter, silent key.

From QRZ, written by PATRICK HERMAN
~~~~~~
The Missionary plane shot down over Peru by the Peruvian military, included the loss of a ham. Veronica "RONNIE" Bowers KD4CKN. Ronnie and her husband Jim Bowers KD4CKM were on there way to Iquitos Peru from Benjamin Constant in Brazil.

Muskegon, Mich-native Veronica "Roni" Bowers, 37, and her 7-month-old daughter, Charity, were killed and pilot Kevin Donaldson was wounded when their Cessna was shot down by a drug-sniffing Peruvian aircraft. A U.S. surveillance plane monitored Peru's downing of the plane carrying American missionaries, a U.S. Embassy official said Saturday. Map courtesy www.larepublica.com.pe "There was a US government tracking aircraft in the area in support of the Peruvian intercept mission," was the official statement from an embassy official in Lima. "As part of an agreement between the US and Peru, U.S. radar and aircraft provide tracking information to the Peruvian Air Force on planes suspected of smuggling illegal drugs in the region. U.S. government tracking aircraft used for this program are unarmed and do not participate in any way in shooting down suspect planes Jim and Corey returned to the United States Sunday. They are in North Carolina, where they will spend time with family members before returning home to Muskegon.

Thanks for all the Prayers, Patrick Herman KI8EP cousin of Jim Bowers"
~~~~~~

The United States government is involves to aerial warfare
in a far off land trying to solve domestic consumption problem.
Makes no sense.

As a Technician Plus, she had no HF frequency privileges
below 28.5mhz other then Morse code CW emissions.
Like many United States missionaries that travel to
distance lands to help other, they need access to
HF bands for long distance communications back
to the United States. Until just recently our government
required applicants to pass an unnecessary 13 & 20 wpm
Morse code exam. This test served no regulator purpose,
and is not in conformity with 5 U.S.C 706.
Makes no sense.

It long past time to delete ITU rule S25.5
and FCC rule 47 CFR 97.503(a).

Larry KC8EPO

Thus are the seeds of collectivism. If only one child's life is saved,
guns should be outlawed. It's a slippery slope.

The solution is to allow private organizations to select their members
and reject *anyone* for *any* reason. It falls under the heading of property
rights. IMO, if the Boy Scouts don't accept any public money, then they
have a logical right to bar gays or even anyone with brown eyes.

So far as I am informed there has been no other nation with the numbers of hams that would cause the crossmode congestion of the sort that is rather certain to result if the band mode segments were dropped. I do clearly remember when SSB was beginning to make inroads into AM in the 50's and 60's, here within the US of A... lots of contentious scrapping was invloved.

A lot of the problem is merely the result of prevailing attitudes. If hams were still nearly all gentlemen, as it was, one might suggest that the problem would be self solving. Unfortunately we have far too many hams today who disdain the term.
And at that, the FCC saw fit (rightly I am convinced) to partition the bands long ago, and with good and sufficient reason (probably as much to protect foreigh operations as anything else). Nothing has since happened that would indicate that hams have moved in the direction of better cooperation such that any modification of the band segments is indicated.

Some time ago I heard about a proposal to move the ham band on 40
down a 100KHz, so it would start at 6.9MHz and end at 7.2MHz. Thus
avoiding the broadcasters above 7.2MHz. Who/what is allocated in
6.9 to 7MHz anyway?

You can do a decent job with an 8ft vertical section and a
large top hat along with a large ground plane. If I were you,
I would install a 100ft by 50ft top hat at exactly the legal
height limit and I would make it as ugly as possible. :-)

You really have no clue, do you? Despite your longtime license.
CW ops stay out of the SSB portions of the band because they WANT to.
The day that band segments are dropped we will see that there is no such
reciprocity from the SSBers. In particular, the code haters.

How CAN a fellow of your education be so far off base??

A Tecbnician class license, obtainable easily from sitting through a
single day of "cram school" wherein the applicant learns nothing beyond
a few memory tricks with which to answer at least 70% of the very
questions with their exact answers he learned in the same session -- the
graduate gets full 1,500 watt privileges on a vast array of frequencies
using gear that he has no clue to what is inside..which at that power
level definitely has hazardous voltages that -to me as a former Aircoupe
owner and Cessna jock- make a simple takeoff and landing a piece of
cake.
Evidently you've never seen the inside of a high powered transmitter.
Anyone groping within had better know, and know well, in advance where
the gotchas are located.

In case you hadn't heard- you might as well fall 10,000 feet as 10,
most of the time. The medics say that if you fall your own height you
are at high risk for life threatening injury.

Your logic is really amazing.

Pedophiles, adult males who prey sexually on juvenile males, are a presumably small subset of homosexual males, who comprise a small percentage of all males. How the duece can you equate that to "murderers are a minority of men" and act as though it was in some way equivalent? Are you really that far out of touch?

The Boy Scouts should not allow homosexuals to be scout leaders for the simple reason that it is well known that pedophiles naturally gyrate toward group settings where vulnerable juvenile males are concentrated, and those settings where they are most likely to be able to have close isolated personal contact with the youths.
That alone is sufficient reason to eliminate homosexuals as scout leaders or officials in any capacity.

Here's what the discussion was about, Dick.
Have you ever asked yourself: What is the most important function that
hams perform? What knowledge/skill does a ham need to perform that
function? Should arbitrary knowledge/skill requirements keep people
capable of performing that most important function out of the ARS?

Larry,

To use the story of two tragic deaths in order to further editorialize on your pet anti-morse testing peeve makes you look like an unfeeling jerk. The woman's death had nothing to do with amateur radio or with her lack of HF access.

Dave K8MN

But taking an exam *IS* a requirement for hams so there's no analogy. But
it is true that someone who is not going to operate need not take an exam.

I don't work on stuff that I know nothing about, Dick, do you?
If someone is foolish enough to work on a 1,500 watt transmitter without knowing what he's doing, he deserves to be on the list for the Darwin awards. And I don't recall any Q&As on any of the exams that would qualify someone to work on a 1,500 watt transmitter.

Is there a governmental requirement to pass a test on poisonous snakes before anyone is allowed to pick one up? Get real, Dick. Only a fool would think there is a way to protect a fool from himself.

> Are you really that far out of touch?

Your statement says exactly the same thing, Dick. If you are going to
condemn all homosexual males for the actions of a few, then to be
consistent, you must condemn all males for the actions of a few or
all blacks for the actions of the few or all whites for the actions
of a few or all Jews for the actions of a few or all Germans for
the actions of a few. It is a never-ending slippery slope.

> The Boy Scouts should not allow homosexuals to be scout leaders for

> leaders or officials in any capacity.

Then using exactly the same logic, heterosexual males should not be
involved in the Girl Scouts where all those juvenile females are
concentrated. After all, there are twice as many pedophiles among
heterosexual males as there are among homosexual males.

But you missed my Libertarian point. If the Boy Scouts do not accept any
public funding then they should have a right to bar anyone for any reason.

Hi,
I am looking for a morse code practice program for Windows 98.
It can not be a DOS program because my sound card will not work
with it and my computer has no PC speaker. I have hunted
around and only find DOS type programs or programs that require
a PC speaker.

Anyone have any ideas?

Thanks,

Your terminology is suspect as usual. "Most important" may not be
congruent with all the elements of satisfied by the 'basis and purpose".
If there was no reason for ham radio other than for emergency
communications and the only requirement for those operators was merely
PTT or keyboard operating skill, then there would be no valid for the
existance of an amateur radio service. You can't separate that single
operator function from the other parts. An operator may need technical
skills as well as just the ability to talk into a microphine. He might
have to install a station and build and erect an antenna, solder PL259's
to coax, install open wire line, build a twin lead Jpole for 2meters
etc. in an emergency situation. Your point is way too dull to be
effective.

The difference is that you and I have knowledge enough to learn what we
are about to get into. Licensees whose entire body of technical
knowledge consists of an afternoon with Gordon West do not.

Don't you know, these guys don't care what happens to amateur radio. They want it to stay exactly the same as it was for the next 20 years, they're too rigid to adapt to any changes. Then in twenty years they'll be dead, and they could care less what happens after that. It's the infantile "I want what I want, and I want it NOW!" syndrome in a 50+ body. Too bad they're too big to spank.

Besides there are no frequency restrictions on hams in South America.
If you have a license you get to operate.

So what do you think of LA's recent decision to limit the boy scout's use of public facilities in that city, Cecil? A large number of groups, like the boy scouts, use those facilities each year and I'm sure the city has not checked membership rules of those other groups. In other words, the boy scouts were singled out solely because gay groups decided to target that specific organization. Of course, this leaves the boy scouts in a no-win situation - the best way to fight this rule is to find other organizations with similar rules (showing the rule was unfairly applied to them alone), however to do so would mean those other organizations might face the same harassment the scouts are now facing (something that nobody would wish on their worst enemy). I'm ashamed the city of Los Angeles, one of the largest cities in this country, would choose gay groups over the BSA (and I'm sure those gay groups still get to use the public facilities in LA).

> one on Sunday as opposed to any other
> day of the week?

Anyone can have a beer anytime they want, Hans. However, since the state is responsible for licensing alcohol sales, they have the right to set rules concerning those sales. And, in some parts of this country, the residents of those states feel a law restricting sales on Sunday is exactly what they want. By the way, the primary reason for these laws is to shut down bars, and strip clubs, so people don't have to deal with that nonsense on their way to and from church on Sunday (or, for those not so religious, while out on family recreational activities).

> [snip] But as soon as they begin
> inquiring into people's private morals
> or enforcing blue laws, they become
> nothing more than armed clergymen.

The police don't enforce the blue laws, Hans. That is the responsibility of the businesses with alcohol licenses (in the story I gave, the police were enforcing the shoplifting law, not the blue law). And, again, nobody is "inquiring into people's private morals." You're free to get as drunk as your morals desire - even on Sunday, Hans.

I know you don't like not having the ability to buy alcohol on Sunday, but you're not the sole resident of this country (and neither is Cecil). When the state makes laws, they have to find a balance between what you want and what others want. And I'm sure lawmakers felt that allowing you to buy alcohol six days a week, and banning sales one day a week, was a more than generous balance between the desires of those who want to get drunk and those who want no sales at all.

13.10.010 Shortwave radio receiver defined.

As used in this chapter, "shortwave radio receiver" means and includes any radio receiver or other device capable of receiving messages or communications transmitted on any radio transmission station operating on a frequency between 1600 kilocycles and 2500 kilocycles, or on a frequency between 30 megacycles and 40 megacycles, or between 150 megacycles and 160 megacycles. (Ord. 5462 ï¿½ 1, 1950: Ord. 4322 ï¿½ 1, 1944.)

13.10.020 Installing or using shortwave radios in vehicles prohibited without permit.

Except as provided in Section 13.20.050 of this chapter, every person who, without obtaining a permit from the sheriff or from the forester and fire warden authorizing him to do so, equips any vehicle with, or operates any vehicle equipped with, a shortwave radio receiver, is guilty of an infraction. (Ord. 83-0066 ï¿½ 90, 1983: Ord. 5462 ï¿½ 2, 1950: Ord. 4322 ï¿½ 2, 1944.)

13.10.050 Exemptions from permit requirements.

The provisions of Section 13.10.020 of this chapter do not apply to:

A. A vehicle owned or operated by the United States, the state of California, any county, city and county, or municipality of this state, or any subdivision, agency or instrumentality of the foregoing if the department head or other governmental officer in responsible control over the operation of such vehicle has expressly ordered, authorized or approved the use of a shortwave radio receiver therein;

B. Any vehicle owned or operated by a person or association of persons licensed by the Federal Communications Commission to operate a fixed or mobile shortwave transmission station, one of the authorized purposes of which is to communicate by radio with such vehicle or with other vehicles owned or operated by such person or association. The owner of such vehicle coming within the foregoing exemption shall inform the sheriff of such use and give him the license number of the vehicle. Failure to do so is a misdemeanor;

C. Mobile telephone equipment for use in conjunction with communication service furnished by public utilities under the jurisdiction of the Public Utilities Commission of the state of California or the Federal Communications Commission. (Ord. 4861 ï¿½ 1, 1947; Ord. 4322 ï¿½ 4, 1942.)

13.10.070 Violation -- Penalty.

Violation of this chapter is an infraction punishable by:

A. A fine not exceeding $50.00 for a first violation;

B. A fine not exceeding $100.00 for a second violation within one year;

C. A fine not exceeding $250.00 for each additional violation within one year. (Ord. 12264 ï¿½ 1, 1980: Ord. 4322 ï¿½ 7, 1942.)

13.10.080 Severability.

If any provisions of the ordinance codified in this chapter, or the application thereof to any person or circumstance is held invalid, the remainder of such ordinance, and the application of such provision to other persons or circumstances, shall not be affected thereby. (Ord. 4322 ï¿½ 6, 1942.)

Yes, I've met arrogant cops before, Jerry. But I've never met one who would openly, and willfully, violate the law over something anywhere near as simple as a CB radio complaint would be (and that includes the cop in your little story). Therefore, to suggest this is something that the average person should be gravely concerned about when it comes to HR-2346 is absolutely absurd. In other words, lets try to keep this discussion within the realm of reality.

No kidding, Bill. That's what I've been saying all along. A cop doesn't have to be an expert to do his job - experts are brought in later, if needed, to testify about any evidence gathered. All the cop has to have is enough knowledge to recognize a probable violation, gather information, and gather evidence. Again, when it comes to HR-2346, any testimony of an electronics nature would involve an expert called during any legal hearing into the matter.

> > In whatever situation, all the cop has to have

> due to noise.

Are we talking in circles here, Bill? I just got through saying that a cop has to have enough knowledge to do his job (gather evidence and perform whatever test), and then you come back with a rant about me not thinking a cop needs to be qualified. I'll repeat it again (using your word this time so you'll understand what I'm saying) - yes, a cop has to be "qualified" to do his job. But that does not suggest for a moment that the cop has to be an electronics expert to do his job, or any other kind of an expert to do his job. If expert testimony is required to give details about that illegal radio (or

whatever), that expert can be called later in the courtroom.

> PLEASE tell us how a cop can do that at all?

Oh, good grief! I just answered that a few messages ago in this very thread, Bill. So that I don't have to keep repeating myself for every single person who joins this thread, please go back and read my previous answer.

> expert witness report stand on stipulation.

Reports from experts are entered into evidence every day in courtrooms across America, Bill. And, in the great majority of those cases, the report is never challenged. In fact, about the only time it would be challenged is if the lawyer, or his expert, found a weakness in the report. Otherwise, most opposing lawyers would rather not draw too much attention to a report that adds evidence against his client.

Actually, Sam (and here is your answer also, Bill), since legal CB equipment has a type-acceptance sticker on it, and illegal equipment does not, here is one extremely simple method that could be used to determine if the device is illegal for the unlicensed operator. And I can think of several additional methods that would be just about as simple.

They were not "practicing interception techniques." They were engaging what they thought was a aircraft transporting drugs, with no flight plan filed and no response to radio challenges.

> A few weeks ago a US warship sank a Japanese
> fishing boat, killing 9, including
> schoolchildren, while practicing surfacing
> their boat.

They were not "practicing surfacing their boat." They were giving a demonstration of that submarine's ability to surface quickly - a demonstration the Captain was ordered to do by fleet headquarters when conducting tours for visitors (more in another thread).

Gee, the deaths of those two people certainly provides another opportunity to trash the drug laws again, doesn't it, Keith? Are you planning to write that on their grave stones also? Sorry, but those two people are not victims of the drug war. They're victims of a flight plan that didn't get listed properly, and a pilot that didn't monitor the proper frequencies. Had either of those two things occurred, those people would be alive today (drug war or not).

Oh, come on, guys (Ed, Richard, Larry, Cecil, and Dick). Read the darn subject line. When Jim said to that "we need to eliminate code entirely," he was obviously addressing the subject (code testing). He even mentioned "classifications based upon code speed," which is a testing issue having little to do with people using code on the radio. And he is right - when it comes to code testing, code probably should be a thing of the past.

Don't overthink the problem Dwight. The biggest reason bars close on
Sunday is that the bar owners want to.

Douglas County in NE is 'dry' which in NE means beer and package. Omaha
which covers most of it is quite wet but doesn't open until noon on
Sunday. You have never seen so much beer sold in a six hour period from
6AM to noon anywhere outside the Quebec ballparks where they don't sell in
the stands..

I still can't believe people who keep wanting to hold the code so near and dear. If you want to use this form of communication, great. It is outdated. Keeping it does not attract new hams. Kids with computers are just not excited by the prospect of morse code. People have to get used to change and quit clinging on to the past.

Second, the ARRL can't win. If they support all hams passing a 30 WPM code test, the coders are happy and everyone else gets pissed. If they support no-code, all the old timers that cling to the past get pissed. They can't win.

If little boys are twice as likely to molest little girls, then we keep
little boys away from the Girl Scouts.

If homosexual mean are more likely to molest boys, we keep homosexual men
away from Boy Scouts.

So yes, does that answer the question?

Perhaps more hams would be gentle if certain old timers would start setting a good example and acting gentle instead of spouting insults and innuendo. I will believe you are concerned about the gentleness of hams when you feel it applies to your conduct here. I have seen you do many things that I do not consider to be good examples.

Can you explain why you feel that gentle conduct should apply to others and not yourself?

3693. Submarine & Captain's Mast

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-24 11:05:31 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3AE55DEB.A40606A4@sccoast.net>
Source record: 7992

Since I know a good number here have military backgrounds, I'm sure most have followed the events surrounding the submarine accident (involving the Japanese boat several weeks ago). Therefore, I know most will have heard the results of the Captain's Mast today (written reprimand).

I don't think the Captain of that submarine should have received any form of punishment at all. If fleet wanted such a dangerous activity like that done while visitors were aboard, they should at least stand behind the Captain if, and when, an accident occurs. Instead, we have what appears to be yet another military member falling on his sword to cover the shortsightedness of his superiors.

This is especially true when, in my opinion, the Captain didn't really do anything wrong. A big fuss was made about the amount of time he looked through the periscope (about 90 seconds instead of the recommended 180). However, that recommended three minutes is for normal surfacing operations, not the procedure that was being demonstrated - zero seconds are recommended for that procedure (emergency surfacing), so 90 seconds was more than reasonable for a simulation like that.

Furthermore, it really doesn't matter how long he looked through the periscope. Since he had not seen the approaching vessel during the time he was looking (the vessel was not visible in the conditions that existed that day), he would not have saw it approaching no matter how long he had been looking - two minutes or two hours. The accident would still have occurred if that submarine surfaced at that moment.

People have to understand that the military's job is a dangerous one, and occasionally accidents like this are going to happen. There is no way to prevent them. Heck, we have civilian boating accidents all the time, even without the complexities of military missions thrown in. In reality, it is a wonder, and a credit to the military, that we don't have far more accidents. And, like there is often no way to prevent those accidents, there is often no particular person at fault - the accident is simply the result of pushing men and machines to the limits. This incident appears to be one of those accidents where nobody was truly at fault. The procedure that submarine was doing is dramatic and obviously dangerous to nearby vessels. The crew did it's job well (even if not perfectly). The Captain did his job well (even if not perfectly). What more can we expect from human beings?

Anyway, I understand why the Navy decided to punish the Captain, and why the Captain decided to take that punishment without a fight, but I don't think it is right in the end. Doing it for the good of the country, or for the good of the Navy, is not right if an innocent

person is punished, or if that hides a real problem (the military's tendency to find a scapegoat whenever something goes wrong, or even when something doesn't go wrong but it looks bad).

> So who says that Bill sets NCI's agenda?

You have, Dick, on numerous occasions. Bill has said that he speaks for NCI when he states that the organization is not opposed to the use of Morse code. The NCI web page states that the organization is not opposed to the use of Morse code. Yet you persist in this "secret agenda" paranoia. NCI has a secret agenda, ARRL has a secret agenda. You probably believe it is coincidence that all of those organizations and individuals whose views differ from your own are hiding some secret.

Yes, I do, Dick. I do a fair amount of travel, mostly on ARRL business, and
spend most of my weekends outdoors working on my old pickup truck or my yard.

Why do you ask?

As to my sourpusseshness, I pointed out that it is pretty petty to drop your
League membership over something not important enough to remember. I still find
that a bit odd.

The Dope War is the DIRECT cause of the deaths of two innocent people
and the possibly permanent crippling of another.

Net gain -- none.

> Are you
> planning to write that on their grave stones also? Sorry, but those
> two people are not victims of the drug war. They're victims of a
> flight plan that didn't get listed properly,

Sorry, this is not correct.

> and a pilot that didn't monitor the proper frequencies.

Actually, he was monitoring the frequencies that he was assigned to
monitor.

> Had either of those two things occurred, those people would be alive today (drug war or
not).

You must be so proud that you can find a way to get off the hook for
your money being spent to kill a missionary and her 7-month-old
daughter.

However, the fact is that they were breaking no law, they were targetted
by a multimillion-dollar AMERICAN "interdiction" jet, which spent an
hour leading Peruvian fighters to the missionaries. This is not the
first time that this activity has resulted in the shootdown of innocent
people, it just happens to be the first time that the victims couldn't
be smeared as drug smugglers following the crash.

The official statement from the US State Department, made to justify the
killing, is a lie (the claim is made that the plane entered Peruvian
airspace from Colombia, when in fact the plane never left Peru at any
time during the trip).

I dunno about you, Dwight, but when the government has to lie to get out of trouble, clearly what they were doing is WRONG.

When the Dope War is the excuse for this kind of activity, even if NOBODY had died, don't you see a problem here?

It's Brakob, Phil. And Hans' retired grade do NOT mean that anything he has to say on defense-related topics makes his word sancrosanct, any more than my service in the Marines makes mine immediately beyond reconsideration.

None the less, it would appear that Hans didn't learn anything while accumulating enough frequent flyer miles to acquire that title. Hans was proabaly on the "ROAD" program...(R)etired (O)n (A)ctive (D)uty.

The incidents cited by Hans were tragic and horrific.

Should we STOP trying to intercept drugs or practicing emergency surfacing techniques on submarines because they happened? I don't think so.

Should we learn from them and move forward...?!?! Hmmmmm....?!?!?! Me thinks that a far better way to proceed than to be making the snide, demeaning sleights he has. Not very well thought out and directed at the wrong parties.

>Date: 04/23/01 5:48 PM Eastern Daylight Time

>Sadly they are the latest innocent victims in America's ever growing drug
>war.

They are just the most obvious.

According to the AMA, there may be as many as 75 to 200 drug related deaths of children (defined as under 21 by them) in the United States alone DAILY. This includes deaths from the drug use itself, and violence related to the culture.

That's EVERY DAY. Where is the indignation and the pontificating from Hans and the others over THOSE deaths?

THOSE deaths aren't spectacular and DON'T fit Hans' rant against me, ergo they go unnoticed and without comment. Go figure.

These were horrific deaths. I hope there are some sort of repercussions for the controller who directed the attack and the pilot who pulled the trigger...but this situation should generate new intercept techniques and visual identification of targets.

A fly-by of the Cessna and a demand to land would have certainly been acknowledged and complied with by the missionary pilot. A tragedy would have been averted.

Drug related deaths and tragedies won't end until the apathy about drug use and it's terrible toll on human life and our families ends.

>change and quit clinging on to the past.

Kids are not excited by radio....PERIOD.

It is old, it has no mystique, it is nothing special. It like getting
excited about a telephone., or a cell phone.

The problem is not CW, or a lack of CW. CW is meaningless, except to
those who use it.

>Second, the ARRL can't win. If they support all hams passing a 30 WPM code
>test, the coders are happy and everyone else gets pissed. If they support
>no-code, all the old timers that cling to the past get pissed. They can't
>win.

Getting new activity has nothing to do with old-timers or new timers.
Radio used to be cutting edge, and now it isn't. People used to like
to fuss around with stuff and build stuff, now they don't.

The world changes, and the current trend is away from working for
anything..or learning how stuff actually works.

The effect of eliminating code is simply to piss off the people who
enjoy CW, and it will certainly NOT rekindle interest is old stale
technology like radio.

It isn't old timers against "new age" radio operators. It is people
who grew up loving radio and who were thrilled by the concept of
talking to people all over the world trying to understand how people
view it as something no more magic than a telephone.

Hell, look at CB. It peaked and died way off. The only real activity
that is increasing is pirates without tickets of any kind. They are on
160, 80, 30,20,15, and ten meters...and there are more every month.
That's where the future of radio is...in not having ANY license. And
nothing we can do will change that, all we can do is make it more
uncomfortable for people who used to enjoy it.

Unfortunately that's the way most things work. You do what you can to
prevent known dangers and work with what results as best you can.
You can be sure that keeping known adult homosexuals from leading Boy
Scouts will prevent some cases of abuse, if not all.
Homosexuals have the right to be different. They DON'T have the right
to force it on the rest.

For sure there are some of those who could benefit from it. Just like
some ARRL staffers. <BSEG>

Ed likes to ignore facts, like who is it that has stridently demanded
their "right" to the airwaves, whether or not they conformed to the
requirements.

Sure I'll explain it. You say that if they use their callsign you have
no problem with them, them youstudiously ignore the second half of the
issue. What does THAT mean if not that you'd rather ignore them?

Maybe you'd better dig back into the archives and refresh your fading memory on the subject, OM and find out just who did what to whom. I don't take that sort of treaemant lightly. In case you don't know, one cannot deliberately trash someone else then expect to receive the best sort of treatment in return. Some people don't take well to that sort of abuse-that which was handed out by so many of the codehaters posting here. I'll never again have positive feelings about some of them and I don't see that changing. For sure you ignoring all they did and criticising me for responding won't do it. 'insults and innuendo' is basically fact, whether or not you wish to accept it. Yeah, it sure would have been nice if all this crap had never started. But I didn't start it. I can't end it. But I won't capitulate to it.

So you'd rather ignore that I dropped my membership becasue the ARRL
sued the FCC instead you'd rather focus on the trivial reason why they
did it. I see.

"Land Mobile" globally from 6765 to 7000. Not much going on that I can
hear.
>
Only 7000-7100 is exclusively ham radio globally. 7100-7300 is shared
with broadcasting globally. Many couutries don't let hams above 7200.
>
Lotta scuttlebutt floating around on this one. It's based on first
getting an agreement with the broadcasters to stay out of the 40m ham
band at the next ITU gathering. Whch may or may not fly at the outset.
SWL broadcsating is growing, the heat is on.
>
If such an agreement is reached the scuttlebutt indicates that the
40m band could become either 6.900-7.200 or 6.900-7.100. Seems like
there is some possibility of losing 100kHz of the 40m band in trade
for getting rid of the broasdcasters.
>
Personally I see a lotta potential for being pain in the butt no
matter which way it might go if changes are made, might be better to
leave 40m as is. None of the existing "legal" HF ham xcvrs can
transmit between 6900 and 7000 for instance. Snip, snip . .

God believing something turns it into reality, Dick. Does your believing something turn it into reality? If so, please believe that I will win the Texas Lottery. I have presented evidence that foreign hams don't cause chaos in their unsegmented ham bands. You, OTOH, have presented your feelings instead of any evidence. Why do the PACTOR Extras stay out of the lower 25 KHz of 40m? It is perfectly legal to operate PACTOR there.

What we appear to be seeing is the effect of allowing the government to own public facilities. That is akin to the devine right of kings and Libertarians are against such.

Don't know the details, Dwight, but I can state the Libertarian position in general. The individual who owns the property gets to make the rules concerning the use of the property. "Public facilities" as they exist today, would be phased out under Libertarianism.

To bad you are incapable of applying that rule to yourself. I have
posted a reasonable argument only to suffer an ad hominem attack
from you in return.

There's a Windows based program called "NuMorse" at

http://www.jonal.net/marc/files.htm

It can use either the PC speaker or a soundcard for output. Have not used the program, so can't comment on how good it is, but I know some folks who've used it and liked it.

The pilot said he did file a flight plan and did identify himself
over the radio. There is even a recording of his frantic radio
messages.

Let me help you put this Captain's punishment in prospective, Dwight.
When I was in the Army in Bad Kissengen Germany with the 3rd Infantry
Division a Private, the lowest rank in the US Army, refused a Sergeants order
to go into a garbage loader and find some lost military book. Then a officer
ordered him to do the same thing and he refused, demanding protection to help
from being exposed to disease.
For that "criminal act" he received 45 days restriction to barracks,
lost two months pay and was assigned to extra duty for 45 days. Upon
completion of that sentence he was kicked out of the Army, lost his entire
college fund of $30,000 and had to reimburse the Army his enlistment bonus.

And you think this Navy Captain who get a slap on the wrist and will retire
with a nice pension and benefits that negligently killed nine people due
to his dereliction of duty should not be punished?

That is rude and insulting, Dick. Is this an example of how old timers are all gentlemen, as you implied in an earlier posts.

If the best you can manage is to devolve this into a petty insult, I see little reason to continue. It reminds me of my grammar school days when a kid would be caught being wrong and respond with an insult to try to salvage what little he could from a losing situation. I had expected better of you, Dick. I am disappointed.

Perhaps you are not aware of the number of conversations I have had with Brennan price on the various ways to address the 10-meter intrusion problems. I didn't mention it here because I thought we were all in agreement that 10-meter intrusion is a Bad Thing, so I didn't see a need to state the obvious. Obviously there was a need to state the obvious, so let me do so; 10-meter intrusion by people who are operating outside the scope of Part 97 is a bad thing.

I remember it well, Dick, and I spoke out against what I felt was mistreatment back then, too. (Ask Carl.) And they, like you, presumed that I was speaking out because I disagreed with their views on code testing; I can't count the number of times that Carl Stevenson "knew" that I and ARRL had a "secret agenda" to keep code testing forever. It is unfortunate that things seem to have come full circle. I don't know what it is about being on the "losing" side that seems to bring out the worst in people.

> In case you don't know, one cannot deliberately trash someone else then expect to

> many of the codehaters posting here.

And who is handing out the abuse now?

> I'll never again have positive feelings about some of them and I
> don't see that changing.

My point exactly, Dick; you are perpetuating a cycle that will leave many newcomers not having positive feelings about you, old timers in general and the message that you think you are offering about the value of Morse code. In case you don't know, one cannot deliberately trash someone else then expect to receive the best sort of treatment in return. What really gets to me is that the conduct you are choosing is really undermining the only way we are going to have left to promote the use of Morse code.

> For sure you ignoring all they did and criticising me for responding won't do it.

What is with you and this obsession with the word "ignoring," Dick? The reason I am not discussing the reprehensible conduct by some of the NCTA folks several years back is that, well, that was several years back and this is now. If you feel I am "ignoring" things that happened years ago because

I don't discuss them now, I will agree with you, as long as we have made it clear what you mean by "ignoring."

>Yeah, it sure would have been nice if all this crap had never started. But I didn't
> start it. I can't end it. But I won't capitulate to it.

Yes, you can end it, Dick; we are all responsible for our conduct and, if you meant the first half of your post, you know the net effect of the choices you are making right now in "not ending" it. Unfortunately, some of the rest of us have to watch you tear down Morse code and watch you discourage new hams from ever wanting to learn it.

Continue if you must, but don't try to say that someone "made" you do this. You are choosing to do and say everything you do and say and you are completely aware of the consequences and that you are perpetuating the crap.

>None of the existing "legal" HF ham xcvrs can
>transmit between 6900 and 7000 for instance. Snip, snip . .

My Southgate Type 7 transceiver already operates down to 6900 kHz. ;-)
Perfectly legal, too. (the rig, that is. I don't transmit with it below 7000).

Many of the most modern current rigs (Elecraft K2, FT-817, FT-1000MP, etc.)
will simply need a firmware upgrade - easy way for the mfrs. to make a few
bucks. Classic rigs like the S-line, Drake line and Heath "3395 second IF" rigs
will simply need a new heterodyne xtal and a realignment. It's the rigs in the
middle (too old to be supported by the mfrs. but new enough to be
firmware-controlled) that will suffer the worst.

--

Which is better for ham radio: the 40 meter status quo mess that goes back at
least as far as 1938, or accepting a shift to a nonharmonic assignments that
eliminates sharing? Or possibly accepting the loss of 100 kHz in return for a
worldwide 200 kHz exclusive amateur segment?

Great post! The few kids that have an interest in radio usually have a parent
or other older relative that's a ham. Most of the technogeeks today are
interested in computers.

Burt Fisher, who is a bane of this newsgroup because of *how* he says things, has essentially been saying the same thing for years. Ham radio is predominately a hobby for white, overweight, retirees who need something to keep them away from their wives. Younger people who a avid hams are usually social outcasts in their peer group. One only needs to attend a large hamfest to confirm this. Dayton draws quite a few characters. (I usually get a laugh from the ones who plaster antennas all over themselves)

Wayne Green amuses me when he gets on his high horse about ham radio's dwindling ranks. The interest isn't there. Even if it is, kids will grow bored with ham radio when they hear a bunch od old men on the HF frequencies talking about the weather, health problems, or "rig hr is...". As for contests, I'm tired of those after about 15 minutes. The same goes for DX and other "wallpaper" collecting.

...and if you dare to trash morse code testing - in particular, the now-defunct high-speed code testing - you're a liberal, communist, pinko (or to quote Rush Limbo, a "long-haired, dope-smoking, FM type".)

I guess that this now includes ALL new vehicles that have stock radios where
the "AM Broadcast Band" goes up to 1710.....

Also noted in that range is the 160m amateur band. Federal regulations and
rulings override. Licensed amateurs do not have to notify the sheriff as per
the exception in "B" below. FCC ruling 93-17 made that clear: Licensed
amateurs are exempt from state and local "scanner" laws, including those
regarding scanners in vehicles. [The ruling also involved amateur transmitters
with "out of band reception capability."]

3751. It's Not About Numbers, It's About Quality

Newsgroup: rec.radio.amateur.policy
Date: 2001-04-24 20:03:25 UTC
From: k4yz@aol.com
Message-ID: <20010424160325.08623.00001328@ng-md1.aol.com>
Source record: 8051

QUOTE FROM ARRL WEB PAGE

Amateur Radio Numbers Show Post-Restructuring Growth Spurt (Apr 20, 2001) -- Amateur Radio is experiencing a bit of a growth spurt in the wake of the amateur license restructuring that became effective a year ago this month. FCC licensing statistics as of the end of March--the most recent complete figures available--show a net gain of approximately 6600 current licensees, or about 1%, from last April, when restructuring went into effect. Prior to that, the number of amateurs had remained relatively stable since 1998.

END QUOTE

So much for the "new blood" theory of those who professed "Give Them No Code And They Will Come" camp.

Any "salvation" of Amateur Radio will NOT come from dropping the code, either as a testing requirement for HF or no-code for the rest of it, not that any salvation is necessary, but some seem to think so.

This is what Lennie calls a "strawman". The issue has been out there for 40 years now, 10 of which have had a no-code alternative. It's been a panacea, at best.

Other than occassional spurts here and there as other technolgy cycles have come and gone, Amateur Radio has pretty much appealed to a certain type of mindset, and try as some will to make it otherwise so, I imagine it will always remain this way.

Many will argue that there are faster, better ways to communicate. This is true.

But Amateur Radio is as much about FUN as it is about "technology". Anyone can pick up a cellphone, dial a series of numbers and be in contact with someone in Brisbane, Tokyo or Moscow in seconds.

But just dial up "any old number" on the old cellphone and say "howdy", and let me know what your reception on the other end is. When you send "CQ", however, regardless of the mode, you know you are going to be chatting with a like-minded person on the other end.

Not so if you just dial 867-5309 and take your chances...Jenny might just as easily call the cops on you for harrasment as engage you in a conversation.

It's also about learning. And like any other technology or technique, it requires the user to crawl before they can walk and to walk before they can run. And yes, there are those who can stand right up and take off in a trot "in no time flat", but that is the exception...NOT the rule.

Thankfully the FCC has not seen fit to micromanage the licensing structure, but they have, through the input of the ARRL and numerous public comments, created a licensing structure that SHOULD allow the average citizen to advance in such a manner as to have a certain degree of knowledge and competencey when they reach certain levels.

UNfortunately, we presently hamstring (pardon the pun) ourselves with a "program" which does absolutely nothing to really create a learning enviroment, nor does it foster the same degree of respect that it once did BECAUSE of that lack of enviroment.

Amateur licensees USED to have a degree of respect in as much as holding an Amatuer license meant that the holder had assimilated a certain degree of radio technology knowledge.

No longer.

How can we change this?

(1) Close the question pools. I know, "We have heard that before". However often repeated, it still does not make it any less true. Closing the pools to SPECIFIC Q's and A's will force prospective licensees to KNOW something about the subject matter.

(2) Foster and support the "Elmer" concept. Local clubs and individual volunteers who are ready, willing and able to walk the student through the hoops.

(3) Peer pressure of non-compliants. Just like it says. If someone doesn't want to "play nice", we let them know. I whole heartedly agree with those who suggest taht many "newcomers" don't ant to be subjected to the goings-on of some ner'-do-wells. And if this doesn't work, enforcement will. No one want's to swim in a pool that has a certain brown effluent in it...Jammers and the "Liberty Network" idiots (and likeminded jerks) are OUR brown effluent.

(4) Encourage club PARTICIPATION. Thee are lot's of folks who get an Amateur License for no other use than to pass "honey-do" traffic, and that's fine, I guess, but what a waste!

Whatever you do, it's RADIO! Have fun.

That's not going to last either. Once the "computer" becomes just another appliance that controls data transfer from fiber optic cables to various digital video and data home gizmos, that'll be the end of it. Who the hell's gonna waste time with an appliance that downloads the latest bread recipes to your digital toaster? Maybe ham radio gets rediscovered.

Give it a few more years and the Internet as we know it today will be as boring as "rig hr is". Hell, I am already bored with it. You can only absorb so much Usenet crap, e-Bay hype, idiotic personal web pages, chat rooms for morons and porn. In the words of Homer Simpson: "Internet?! Is that thing still around?"

With all due respect, this opinion is subjective. Fly fishing is still around
but one would hardly call it obsolete just because there are commercial fishing
boats out there. When the conditions get marginal and SSB signals fade into the
noise, CW is a reliable form of communication. Therefore, people will still be
able to dx around the world while those without CW knowledge are restricted by
sunspots to talking to their neighbors.

> Keeping it does not attract new hams. Kids with computers are

Discarding it doesn't seem to be attracting new hams either. People who view ham
radio as a substitute for cellphones are not hams in my dictionary.

I somehow fail to see a ten mile lineup of people who can't wait for Morse code
to be discontinued so they can jump into 160 m dxing, contesting and building
radios. Would eliminating any and all testing increase the number of ham radio
operators? Sure it would. Do we want to increase our numbers in such a way? No,
we don't.

Awwwwwhhhh Jim, give us an ever-loving break. Nobody at NCI wants to
end CW use. They only want to end Morse code skill testing. Skill at
PACTOR is not tested for typing ability.

Perhaps, if Dick would give us a list of licensed amateur radio operators
operating outside of Part 97, that would help.

All the hams to whom DXing around the world during the low of the sunspot cycle is important, will be forced by reality to learn Morse code. Being forced by reality to learn Morse code is magnitudes superior to being forced by the FCC to learn Morse code.

> Discarding it doesn't seem to be attracting new hams either.

What????? Subtract out the nocode techs and what have you got?

But, but, but, Jim, using their own argument - isn't it worth it if only one life is saved by calling off the drug war? Is the drug war worth the killing of children? I'm sure this is not the first time but of course, there is a bright side. That dead child will never use drugs so they did him/her a favor. A lot of drug users have been killed by the authorities and saved from ever using drugs again. Some drug users have apparently been murdered by the authorities in order to obtain their possessions under the RICO(sp?) laws.

When a civilian pilot is maimed/blamed and his passengers killed for not being on the "right" frequency over a Western country during peace time, the cat is out of the bag. The anti-drug Nazis are in control. God help the innocents who get stepped on in this fascist process.

These are the words which preceded the question you asked:

> "like who is it that has stridently demanded
> their "right" to the airwaves, whether or not they conformed to the
> requirements."

I find nothing in those words about eliminating CW use. And similarly my response was unrelated to such an idea. Some of the folks on the list have indeed argued that requirements they have not met be eliminated - presumably in order that they might be able to obtain greater privileges.

The use of 13 & 20 wpm Morse code exams to bar otherwise
competent missionary operators was also preventable.
Unfortunately, a few procode forever over advocates corrupted
the public due process of FCC. The 13 & 20 wpm exams
should have ended in 1990, not 2000.

You right, below 28.3mhz, or more precisely 28.1mhz,
since Novice and Tech Plus can use data between
28.1 and 28.3mhz.

Actually, the vast majority of these doe-related deaths are a direct
result of the Dope War, in the same way similar deaths were common
during Prohibition but stopped when that absurd policy went away.

In regards the foreign operation by USA citizens in South America, the FCC web site states: "The FCC does not have or provide information on the specific requirements for reciprocal operation in foreign countries. FCC-licensed amateur operators should make their arrangements with the appropriate governmental agency in the foreign country."

If what you say is true, then we have South American countries permitting USA citizens frequency privileges that their own country denies. Makes no sense.

When the privileges authorized by the FCC license grant are Technician Plus operation privileges, the corresponding CEPT operating privileges are CEPT radio amateur class 1. The Technician plus operating in Europe can use 20 meters, but can not use 20 while in the USA. Makes no sense.

As a hypothetical, I would have to look at the
specifics. Frankly, I don't see that happening
in any case in the immediate future (1-5 yrs).

The issue may well come to the table, if and
when use of the "non-phone" segments subsides
to where there is clearly congestion in the phone
segments but less than full usage in the non-phone.
That may hinge heavily on the code users to
keep up their use...i.e. use it or lose it.
The refarming of the Novice segments made
good sense to me even though the FCC avoided
it. Ain't much, if any, activity in those segments
at all.

I'm saying there is no requirement to do so. The CHOICE of any
individual to build something is their choice. Build it
if you want. I believe, however, that there is no expectation
in the FCC that the ability to design and build homebrewed
equipment by hams at all.

>Since they don't need to ever build anything, you agree
>with Cecil that there is no reason for hams to know anything about radio
>or electronics technology.

Not at all. There is, I believe, justification for knowing
the basics, especially regarding safety to one's self
and others, interference, etc. You can not adequately
be safety conscience without knowing the basics.

Cheers,
Bill K2UNK

>So we are in the final analysis nothing but a
>bunch of CBers in your and NCI's view.

Not as long as we have test requirements we aren't.

Cheers,
Bill K2UNK

That is absolutely not NCI policy.

>Do you think a majority of the present NCI Board of Directors would vote for
>such a policy?

I believe such a vote would fail. I personally, as you and
others know, submitted suggestions to VCC to improve the testing
to make it less prone to memorization. I believe the ability
to radiate power at 1500 watts PEP is not adequately addressed
by ham theory required for technician licenses. I believe
no hams should be limited more regarding power that is
better reflected in the test syllabus for each licnese class.

>>students get these days?
>
>Who will design the tube amplifiers of the future, Bill?

The point is that the design of those tube amps is far more
a specialty today than the general theory of all tubes
which I learned in tech school in 1962/3. The focus today of
basic circuitry, basic components is solid state. The use
of tubes at all now is very specialized applications.

Have you applied for a variance for a simple verticle?
If you wanted a 10/12 foot verticle, that would seem to
be a pretty reasonable request to get granted.

Have you tried getting other hams in your town to get
together to present a proposal to allow the height to be
greater than 8 feet? Odds are that 8 foot hight limit
was put on the books years ago and none of the
current city council members even know why it would
be limited to only 8 foot. You might just be able to get
them to change it.

For a 40m or 80m dipole, you could run that between trees
if the property is big enough. There are also other designs,
less than idela perhaps, that could get you on 40m or 80m
within that 8 foot space.

If you are just waiting for something in your city to change, don't
hold your breath, existing laws are rarely reviewed for current
applicability exceptwhen attention is brought to them. The
ball is in your court.

Heck, you might think about running for town council
yourself to help make things better.

Sounds like you have good reasons to be able to apply
for and get a variance then. YOU are the one that must
live across from that Home Depot. The Home Depot
folks don't care if you want a variance. Woud your
immediate residential neighbors care?

>A ham in our town got a variance for a 35'

Dave, you did not disappoint me with your reply. What else would one expect from a employee of a government agency that recently described the hacking to death of ethic-group women and children as not meeting the precise legal definition genocide.

The death of Ronie Bower and her child is indeed a tragedy. It also shows the failure of US policy. We find USA personal directing a Peru war plane into position to shoot down civilian aircraft. Would we permit that in the United States? I think not.

As for the connection the FCC amateur radio I would recommend that you read the WT Docket #98-143 comments filed missionaries. They may enlighten you.

Well I have to agree with you on this one Steve. However, I don't see the connection with Hans. The illegal usage of drug in our country is a very serious public health problem. Aerial combat in Peru with civilian aircraft is not going to solve the problem. You should ask some of your local elected representatives to spent a weekend in ER with you. The solution is here not there.

Don't know. Once I got into ham radio, I started reading ham radio
magazines - figuring that would be the place to read about ham radio
related topics. Even today, most of the ham radio electronics
construction projects articles are written by hams.

WASHINGTON (CNN) -- In 1994, the Pentagon opposed providing "real-time" aerial tracking data to assist Peru in its policy of shooting down civilian aircraft suspected of drug smuggling because it could lead "to the death of innocent persons and would likely be a serious diplomatic embarrassment," declassified documents show.

The documents, obtained by the National Security Archive under the Freedom of Information Act, are posted on the Internet at http://www.gwu.edu/~nsarchiv/

Two Americans died Friday when a Peruvian fighter -- with guidance from a U.S. surveillance aircraft that was looking for drug smugglers -- shot down the missionaries' plane.

A State Department memo dated May 1, 1994, outlined the vigorous internal debate over the policy, and warned that the Pentagon had ceased providing "real-time tracking data because of its belief that using weapons against civilian aircraft is "inconsistent with international law."

At one point, the memo warned that "mistakes are likely to occur under any policy that contemplates the use of weapons against civil aircraft in flight, even as a last resort," and that by providing real-time tracking information to Peru and Colombia, the United States is "closely involved in the operation and arguable bears some responsibility."

The Pentagon pointed out that the United States argued vigorously after the Soviet Union shot down a civilian Korean jetliner "such actions violate article 3(d) of the 1944 Convention on Internal Civil Aviation and customary international law."

The State Department was divided on the policy, some arguing that aiding the Peruvians actually saved lives, because it lessened the chances of mistakes. "In a perverse way the DoD (Department of Defense) position increases the risk of loss of innocent life in the Andes," the May 10th memo stated. "DoD provides excellent real-time tracking data. By terminating it they do not necessarily force the Colombian and Peruvian governments to cease their policies."

The issue was settled the next year when President Clinton decided to allow the sharing of tracking assistance "if the President has determined that such actions are necessary because of the threat posed by drugtrafficking [sic] to the national security of that country and that the country has appropriate procedures in place to protect innocent aircraft."

A great eulogy to HPM, but the last word is on page 15, citing the
Old Man
himself in QST September 1927:

" And as the last embers of the old pipe turn to grey ash, I ask how it
all
came about : that the ARRL should have succeeded and all its opponents
failed. The answer is clear. It is because with our opponents there was
always some kind of selfish motive to be served for someone, whereas in
ARRL we insisted from the beginning that no selfish motive for anybody
or
anything should ever prevail. Everything that ARRL undertakes must be
100%
for the general good. That policy bred loyalty and confidence. With
these
two things an organisation can prosper forever."

Food for thought.

In my opinion Maxim's acheivement was the creation of amateur radio
as a social organisation.
There were all manner of people experimenting in the early days.
Maxim connected many of them for a common purpose: Relaying messages
and
thereby overcoming the limits of what was then for most a short range
means
of communication. He also set up a social organisation with rank and
position and defined roles, plus a system of ethics, symbols and signs
of recognition.
This system is with today, but sadly is taken for granted and many
mistakes
are being made at the organisational level, in my opinion.
There were other models: In the UK before WWII the model was the
gentlemen
amateur scientist: There was an "artificial aerial" ie dummy load
license
class so chaps could experiment with transmitting technology without
actually radiating a signal. And calling CQ was forbidden. They called
"testing, testing".
The Soviets ran amateur radio under the Ministry of Sport.
Nowadays because of falling numbers of new entrants to amateur radio
there
is a push to lower entry standards and remove code qualifications. In
the
process everything that makes us unique will go.

In ZL all amateurs once had to spend six months on 80m before getting
other
band privileges. In that six months Elmers and new hams met on the air,
assisted one another and in many cases made life long friendships.
Now new hams go on hf and like Tony Hancock in the famous television
sketch
"....have friends all over the world. Just don't have any around here."
Removing the probationary period on 80 was meant to encourage new
operators,
but instead the numbers dropped and many gave up after a period on the
air.
And in ZL the greatest loss of amateurs is amongst no code licensees.
There is an attempt to solve the problems of amateur radio at by
administrative and technical means. I believe these are bound to fail
as the
problems are social and environmental.
Where are you Hiram? We need you.
73.

What *would* T.O.M say?

I dare not pretend to step into his shoes,
but I might dare a synopsis of an imaginery article
from TOM, based on his reaction to other observations
he had made in print, in yon days of yore . . .

First thing he might do is remind us that we are
all young squirts.
Only he had the right to do that.

Then he might remind us about the rotten radio practices
that almost beached Amateur radio in
the pre 1912 era, because every man did
"what was good in his own eyes".

Then, i think, he would walk us down memory lane,
as only the Old Man could, considering it would be
HIS first hand memory. He would remind us about
the previous crisis points, and how we managed
to rescue Amateur Radio time and time again thru
the demonstration of our SERVICE to our fellows,
our competancy and our conduct. Our ability to
adapt to a changing environment, and our supreme
willingness to study, to show ourselves approved
to our fellows, and to the world.

Then he might interject a cameo of sevices performed
during the Monongahela Flood Disasters, where
Amateur Radio distinguished herself with valour
and bravery, especially before the press.

He might remind us that it was this SERVICE,
and not our NUMBERS that saved us at Cairo in '27.

Then he would probably conclude with a summary,
a typical Maxim maxim: anything worth having
is worth working for. We do not build our treasures
by lowering it's worth, but by buttressing it's value,
it's sanctity, and it's purpose.

We stretch ourselves to meet our goals, not
the reverse. And No-Code for the sake of numbers
is Rotten Radio, indeed.

And if I would be so rash to conclude, he would
sign off with " T.O.M. "

And I echo your last sentance,:
Where are you, Hiram ? We need you.

NOwhere if it isn't allowed to begin. No prudent parent knowingly allows
his children to be accessed by predators.

You'd do well to be disappointed with yourself. Your own conduct is not
exactly exemplary here if I may say. You've cone everything you could to
belittle me and my firm assertions on testing which are based on years
of hands on experience as a VE while you have none. You seem to believe
that you can't be wrong and I can't be right.

And I have given you the very reason why- and exactly why that chaos
WILL result when they abandon band plans in the USA -- there are too few
foreign hams. If you had a clue you'r already know that. But you spend
all your time tinkering with antennas so don't know much about what goes
on on the air.

That is correct. The FCC pre-emption specifically stated
"transcievers". No mention was given to separate
recievers (i.e. such as a scanner). The FCC preemption
protects you if your 2m mobile or HT also can receive
any of the cited frequencies.

> the WT Docket #98-143 comments filed missionaries. They may enlighten you.

Take this as fact: The death of the woman and her child had nothing to
do with amateur radio operation or with morse code testing. That you
tried linking the two reveals you to an opportunistic and self-serving
boob.

Hans, thanks a million for that URL! I read the thread and tried downloading it. Can't say I was impressed by NuMorse as it is really stuck in LOW gear - complete with the spacing and all. However, at the URL you gave there was also MorseCat. Now there is a neat program! Ran really nice in Win98. I tried the cypher groups at 30 - I've got a bit of work to do. All text is easier, but it has been many years since I copied 40 without error (that was the fastest tape the US Navy had at Bainbridge Md when I was there in 1967). Heck, I've got something to play with! I'll have to see what I can get back to before I get the HF rig.

While the following is not *exactly* directly following the line of thought in the thread, I think it is relevant in the light of changes on societal thinking in its pursuit of "enlightenment" and the discarding of past mores.

Historically, homosexual activity has been regarded as deviant, abnormal and, indeed, disgusting. I can agree that to mistreat ANY human being just because that person is known to be "gay" is wrong, however. As long as that person conducts him/herself in a manner that is proper, dignified, and circumspect in public, then I should treat that person the same as anyone else I might deal with in the public arena. Heterosexual persons may be uncomfortable in that person's presence, but the obligation to treat that person kindly is there nonetheless. And I, as well as others not of their persuasion, DO feel ill at ease with those who appear to be "effeminate" or a little too "friendly".

There is another "group" of people called Pedophiles who have an unnatural attraction to children and, indeed, cannot relate to adults of either sex. Their attraction may be to boys or girls, but the majority of pedophiles *seem* to be men for whatever reason.

Everybody has an agenda these days. Remember, I stated earlier that the idea of "gay-ness" was something that was not accepted, or, rather, the attending ACTIVITIES of gays was not accepted. In, say, 1965, the idea of having known gay Scouts, or Scout Masters would not have even been brought up. Today, the issues has taken on the cloak of "rights", and in a more liberal, humanistic society, the gays have seized upon this liberalism to bring forth, not the fact that they are gay, but that they should be allowed to openly practice same, and even teach this "lifestyle" as an equal alternative to the hetrosexual lifestyle to our children.

It has been argued that pedophiles are not necessarily gay, but even using the slide rule of ratios (so many non gay pedos to so many gay ones, etc), it would follow that there ARE some pedophiles that are gay. A certain number of those gay pedos WOULD prey on young children. It is not possible to tell who, how many, where, or when one of those would molest a Scout. In years past, the BSA did have some kids molested by other (gay?) Scouts and they were sued. Farther back, a defined policy to protect Scouts was not in place simply because the mores of the time were *usually* sufficient to deter most molestations. Sure, they did occur, I am sure, but not on a scale that appears to have increased in lockstep and in proportion to the relaxing mores of our society. Thus, a policy to exclude sex offenders, felons, and known gays from scouting was put into place. And that galls the gay/lesbian "rights" crowd.

Back to the pedophiles. There is another movement behind the scenes that hasn't achieved any acceptance-----yet. And they are counting on the lessening of standards, the cheapening of morality to bring forth yet another form of perversion to "normality" under the guise of "rights". Yes, these are the pedophiles, the sex offenders, the "boy lovers" who want laws against adult/child sex lifted so they can engage in sex with our underaged sons and daughters! And if you think it is NOT true, then do what I did. Search on the internet for "Pedophile", NAMBLA (North American Man/Boy Love Association), and "boylover". Find a website---www.boylinks.net. If you haven't been aware of this before, you will be shocked, dismayed, and angered. If you are a parent, as I am, you should be alarmed upon viewing the agenda, the goals of these people, photos of kids, AND stories that will/should infuriate you. Some of it is quite harmless--pictures of kids playing sports and kids just being kids. BUT there are others of NUDE boys that shouldn't even be on the 'net. They are there to appeal to the deviant, sick minds of perverts--perverts that would LOVE to be Scout Masters!

NOW! Those that say, "WHY, society would NEVER accept or legalize what now is considered abhorent, sick, deviant and illegal molestation of our children". And I ask WHY NOT? Again, in 1965 or even later, society would not accept an open, legal "marriage" of gays. It was abhorent, sick, deviant and illegal behavior. Yet today, there are alleged "clergy" that will "marry" queers. Society has become so "enlightened", so sensitive to the issue of "civil rights", that we are blinded to what is RIGHT. So is it, therefore, a surprise that any group with an agenda brings forth said agenda, no matter how deviant and wrong,

by cloaking it in a righteous robe of "CIVIL" rights? Yes, they know that this is the only path to their goals--the path that takes a route thru the briars and brambles, the underbrush of liberalism where we cannot see the adversary, and, ultimately blindsides us into conceding THEM their "rights".

Therefore, in order to protect even ONE Scout, one Church youth group, one child from being placed in a position that he/she neither expects or understands, the battle line MUST be drawn and the only way to do that, even at the expense of one homosexual who might NOT molest a child, is to exclude the entire group. The rights of children must be given priority because an adult should be old and mature enough for his wants not to hurt him--especially if he "wants" to molest MY kid!!

In conclusion, two things come to mind. The first is, referring to a comment Dick made earlier; "body of experience". I ask WHOSE body do you want a pervert to have EXPERIENCE with? Your son? Your daughter? Your 12 year old? Is it OK with you if it happens to be MY 13 year old and not yours? Again, the line must be drawn in the sand somewhere.

The second item is something I have heard and never forgot: "You MUST stand for something, or you'll fall for anything"!

Thanks and 73

Jerry

Steve, I agree with you 100% except for the cellphone thing. That would not have worked very well a couple of years ago in the Northeast. Neither would the internet. People forget that the large infrastucture of our 'normal' communications systems can also be its' downfall. Take out the power over a large area (say a state or three) and suddenly you are either 'wireless' or without communications!

I sure do agree about the Q&A stuff. Heck, let a computer generate the numbers on the spot for the various resistance, reactance, resonant frequency, and other stuff. No two exams the same. Sure, the safety questions, operating proceedure, and similar may be mutiple guess, but again - don't publish them.

Morse code may not make much sense, but the technical aspects have been so dumbed down that I simply checked off random answers to resonant frequency problems since I didn't have a calculator, didn't feel like extracting square roots (I can without guessing), and knew I had enough correct answers to not have to worry about it. Besides, going through the whole smash at once in 1993 took enough time without trying to see how high a score I could get.

You mean "Fixed and Mobile" (an international designation). "Land
Mobile" is US slang for same.

International agencies such as national Red Cross/Red Crescent
Societies and the Salvation Army use spot frequencies in that region
when they need to talk to each other in international disaster
relief operations. In the US, the ARC gets such allocations on an
STA basis.

Or was iot the one that the League filed after the loss of the
220-222 MHz portion, and the DC Circuit ruled against the League?
That one doesn't show up in Pike & Fischer so I assume that it may
have been an unpublished summary decision. (Chris is at NAB this
week.)

It's not just a problem of counterfeit stickers. A Type Accepted radio can have a diode snipped out without disturbing it's sticker.

If the cop wants to be a "radio cop" he damned well better have
the qualifications and knowledge that an FCC enforcement agent has
(electronics technician level) or else he's no better than a "police
wannabe" trying to do more familiar police duties.

Your reliance on a sticker/label to determine compliance is about
as accurate as reading the nameplate on a transformer to determine
the output voltage that it is supplying.

The FCC will not and does not rely on that alone to intitate seizure
of operating equipment (marketing violations are another story) -
technical measurements are required.

Rules of evidence.....

Totally preempted by FCC pronouncement. Note the frequencies -
1940s era.

I was with the LA Sheriff's Department in the late 1950s and the
only persons who applied for such permits were sheriff's deputies
who were required to do so by departmental regulations.

Minus 2 on the troll-o-meter.

Doesn't the news about the "toilet plunger" assault in NY or the
Rampart Division falsification-of-evidence mess in LA or the asset
forfeiture scandals across the country get to your part of the
world? (I saw some of that first-hand when I was a reserve officer
in a major police department.)

Rodney King's beating was about a speeding violation that went
"downhill from there".

Following exactly the same reasoning and given that the majority of
child molesters are heterosexual, would you say the battle line MUST
be drawn and the only way to do that, even at the expense of one
heterosexual who might NOT molest a child, is to exclude the entire
group?

Man you are *the* study in strangeness....
Should the FCC then be responsible for him legally allowing a child to
have free access to uncovered high voltage because he was not required
to learn that he was dealing with dangerous hardware, and the need to
protect himself and others from it? FCC should become a party to child
neglect?

The FCC is not responsible for it. The stupid parent is responsible for it.
Is the federal government responsible for stupid parents allowing their
children access to guns? You liberals want to make individual responsibility
a thing of the past.

We are not talking about known child molesters, Dick. We are talking
about unknown child molesters. There are twice as many heterosexual
child molesters as there are homosexual child molesters.

If it is so "meaningless," why is it still required (internationally)
as an HF-privilige license test? Oh...I understand, it is for those
who have been licensed as a long time and had to take the test
in order to get that license. Yup, understandable.

Has the FCC ever, repeat ever hinted at outlawing CW on the
US amateur radio bands? I don't think so.

Strange...I've not seen that in the professional radio-electronics
world. Must be an amateur thing.

>The effect of eliminating code is simply to piss off the people who
>enjoy CW, and it will certainly NOT rekindle interest is old stale
>technology like radio.

Interesting conclusion. "Effect of eliminating code is simply to
piss off the people who enjoy CW..." No one, including NCTAs
in here, are advocating "elimination" of the code.

>It isn't old timers against "new age" radio operators.

No? Define "new age."

>It is people
>who grew up loving radio and who were thrilled by the concept of
>talking to people all over the world trying to understand how people
>view it as something no more magic than a telephone.

NCTAs are a spoiled bunch, no doubt. I'm an NCTA. I was just
hitting legal age when I QSYed a 1 KW transmitter for the first
time. In 1953.

"Magic." I was at the Magic Castle in Hollywood recently. That's
basically a professional magician's club, non-magicians get in
only on the invitation of a member (a professional magician).
Plenty "magic" there, but it is treated as a guild, a craft, actually
a technology of effects. People can appreciate such "magic"
even if the magicians think of themselves as entertainer-illusionists.

"Magic" is what you make it, but if entertainer-illusionists make
bad magic, folks won't like it.

>Hell, look at CB. It peaked and died way off. The only real activity
>that is increasing is pirates without tickets of any kind. They are on

>That's where the future of radio is...in not having ANY license. And
>nothing we can do will change that, all we can do is make it more
>uncomfortable for people who used to enjoy it.

"Discomfort" is caused by trying to keep the past the same even
though the technology and everything else has passed them by.

There is plenty that can be done. Learn, grow, keep on advancing.
Or complain about discomfort when trying to hold onto the past.

>Bill:
>
>Sorry, no sale. The NCTA have always used the need to "advance
>the state of the art" -- presumably in digital communications technology,
>as a primary reason to reduce or eliminate the Morse code testing
>requirement…as if the two were, indeed, mutually exclusive.

Incorrect.

>The claim
>had always been that the code test requirement was discouraging
>brilliant, computer-literate young people who would magically transform
>the landscape of amateur radio communications technology if only they
>had the fetters of this time-honored mode removed from them.

Incorrect and an attribution of the PCTAs, not the NCTAs. False.

>They
>have claimed the Morse code, and it's testing requirement, to be
>everything from "lame" to "ethnic cleansing" -- and insisted that those
>who support continuance of the testing requirement were not in step
>with the "inclusive" nature of this hobby, and, therefore, politically
>incorrect.

Factually and logically incorrect. NCI is advocating only the
elimination of the morse code TEST.

> No, Bill -- the NCTA and their apologists throughout the years have done
>an excellent job of marrying the concepts of Morse code skill with
>technical stagnation -- thus making proficiency in Morse/CW and technical
>competence mutually exclusive in the extreme.

Morse code skill has never been proven to advance any state of
the radio art in any radio service.

>You would have to undo
>over a decade's worth of Fidonet/Usenet debate on this topic to convince
>me otherwise.

This is not Fidonet. This is not a BBS net of any kind.

>I have read and authored the equivalent of dozens of
>full-length novels' worth of messages that relate to this topic, and can
>call myself an expert on the subject without any fear of exaggeration.

tRoll calls himself an "expert" without any fear. Not a problem.
The problem is that no one else considers him an expert.

>The link between technical incompetence and Morse code skill is the
>very foundation of every argument that has ever been made against the
>pre-Restructuring status quo in code testing.

Incorrect.

>This is the truth, the only truth, and the only reality.

Delusion.

>You cannot ever escape this reality in a
>feeble attempt to justify what has been done to permanently obviate
>any future growth in the use of the Morse/CW mode.

Morse code in its present form of aperiodic on-off signals
representing English language alphanumeric and punctuation
characters is approximately 157 years old. Given the highly
untechnical nature of that, it is unlikely to see any "growth"
in technology as applied to radio.

While radio in its infancy could not use any method except
on-off keying, radio has developed enormously in the 105
years since its birth. The development no longer requires
morse code for any regulatory license test reason.

> Deny this if you will, but it is the truth.

tRoll is advised to follow his own words. There is no longer
any valid reason to keep a code test for amateur radio
licensing. Deny that if you will, but it IS the truth.

Vacuum tube design theory, technology, and techniques are now well known. Specific designs are aided, improved, and controlled on the production line by solid-state architecture sensors and computers (TV picture tubes and computer monitors).

In heavy production worldwide, right now, descending order:

Color screen cathode ray tubes
Magnetrons (microwave oven production)
Travelling Wave Amplifiers (broadband microwave amplifiers)
Broadcast-use power amplifier tubes
Photomultiplier tubes
Electron-multiplier imagers (night vision scopes)

The ARRL has been two-faced on the code requirements issue for at least the last decade. On one hand, they're afraid of offending the "older" hams who comprise a large part of their membership base by giving away too much too fast. On the other, they are chomping at the bit to throw away ALL licensing requirements beyond filling out an application form as quickly as possible, in the belief that this will bring in more potential members and more business for their QST advertisers. They once walked a plank over shark-infested waters; it's been a 2x4 since '91, and will soon be a matchstick.

BTW you're completely wrong about Ed Hare. He's his own man here in r.r.a.p; and has proven so many times. The fact that he's totally in the tank with ARRL policies just means he's working for the right firm. If he worked for me, and said one word not in keeping with company policy, I'd stuff him in a cannon and shoot him out the front door, just to make extra sure it didn't hit him in the ass on his way out!

>What was contained in the 16 pages of study guide that got me my General in
>1964 that is lacking on the hundreds of pages people have to study today,
>Larry?

Ed:

Pretty much the same stuff, I rather suspect. The only reason why ham study guides are bigger now is because they contain an entire pool of questions and the exact answers, to be memorized by prospective test-takers. The study guides I used in the early '80's didn't seem that big, either -- but I had learned most of what I knew as a result of 15 years as an electronics hobbyist, so all I really needed to learn were the rules, operational techniques, and other ham-specific details.

>Do you think that it was those 16 pages that made me a valuable
>asset,
>or the things I did after I was given my license?

Both, obviously. I also believe that you are a more valuable asset as a ham because you possess functional proficiency in the Morse code -- something I believe all fully-privileged hams should have. I also believe that functional proficiency in Morse code naturally tends to lead to greater technical competence. People capable of gaining good Morse code skills are also usually at the high end of technical involvement for the same reason -- they aren't afraid to work at learning something useful. The overwhelming majority of the hams I've known that have the highest technical skills have also -- almost to the man -- been code proficient, CW-using, CW-loving Extra-class hams.

There are exceptions, naturally, but for the most part the above is the typical pattern among hams. The exceptions are usually the "repeater gurus" who work full-time in the LMR industry, and can build a linked, wide area coverage system out of the scraps left over from a day's work. I know several of them, and they are "Real Hams" in spite of the fact that they don't know a dit from

a beer bottle. However, at least for as long as I've been a ham, they have always been accommodated by the Technician class ticket with it's slow 5 WPM requirement, or, more recently, the No-Code Technician license. They had nothing to complain about, and they usually didn't. It's the people who don't want to know or learn anything other than how to work the PTT that need to be addressed in licensing requirements.

Bill, I'm not going to get into great details here, but it is not as easy as you imagine. Locate a legal piece of CB radio equipment, locate the FCC info, and then tell me it would be so easy to make up a phony sticker. Let me give you a hint - the FCC is not as stupid as you appear to think.

And, of course, you completely avoided my comment that the FCC info is just one method that could be used to detect an illegal device - that I could think of several other methods that could be used also.

First of all, I'm not relying on anything, Phil. And, as for the police relying on that, if you read back over my comments in this thread, you will see that this was offered as only one method, in a range of methods, that could be used to determine if a device is illegal.

In the 200+ page Technician study guide, Now You're Talking, last time I counted, about 80 pages are devoted to the questions. That leaves over 120 pages of other material -- over 100 pages of which are explanatory material for the 80 pages of questions. The Technician is the typical entry point of ham radio today. In my day, it was the Novice, which had a 4-page study guide. Not exactly the "same stuff" by my counts. Your count may vary.

Didn't you once work as an FCC field investigator, Phil? You know, I can think of one or two incidents where federal law enforcement personnel have went over the edge also. Since you seem to be suggesting that all local law enforcement officers are evil because a handful occasionally go over the edge, should we also think of federal officers the same way because a few occasionally go over the edge also?

What is even more distressing is that you seem to be suggesting that we should have no new laws because of potential police abuse. In fact, your whole opposition to HR-2346 seems to be based on your low opinion of local law enforcement (they're too stupid to enforce this law, too evil, etc). Well, I've got news for you - there are millions in this country that don't think that much more highly of federal law enforcement officers.

For example, when it comes to CB enforcement, I support HR-2346 exactly because I think FCC enforcement personnel has failed miserably over the last 30 years to enforce the citizens band (a situation that began long before the FCC started using budgets as an excuse for everything). In my opinion, local law enforcement can't do any worse at CB enforcement then FCC personnel have done over the years.

I'm sorry, contrary to the apparent attitude of many in this
newsgroup, I'm not willing to end law enforcement, and the rule of law
in this country, because a few bad cops occasionally go over the edge.
The solution is to deal with those out-of-control police officers,
not throw out the laws or resist new ones.

If you think they have an automatic "right" to inspect anyone's
premise because the FCC gets to "inspect a station" on request,
then you have it all wrong. Phil Karn has already
pointed that out to you and others...there is no extension
of that "inspect the station" extended to local police in
the federal law.

Add to that the arrest and handcuffing of a woman for
a seat belt violation in TX.

I am a conservative, but that type of arrest for motor
vehicle violations (other than DUI/DWI) should be
considered illegal. Sadly, he Supreme Ct ruled 5/4
yesterday that the police can do so.

No cheers on that note.

>handful occasionally go over the edge, should we also think of federal
>officers the same way because a few occasionally go over the edge also?

Neither Phil, nor I, nor anyone else is suggesting that ALL local
law enforcement officers are evil. The point is that there
should not be ANY locals that are in that catagory...AND the
law should be such that it does not foster or offer opportunities
for "evil" behavior by any local cop.

> What is even more distressing is that you seem to be suggesting that
>we should have no new laws because of potential police abuse.

We should be VERRRRY careful to avoid crafting any new
laws that open the door to such abuse. HR-2346 (IMHO) does that.

> In
>fact, your whole opposition to HR-2346 seems to be based on your low
>opinion of local law enforcement (they're too stupid to enforce this
>law, too evil, etc).

They are not too stupid, they simply do not have the technical
competency to get involved with radio regulations of any kind.

>Well, I've got news for you - there are millions
>in this country that don't think that much more highly of federal law
>enforcement officers.

Abuse by any enforcement agaency (local, county, state or federal)
should be viewed with great disgust by all.

>began long before the FCC started using budgets as an excuse for
>everything). In my opinion, local law enforcement can't do any worse
>at CB enforcement then FCC personnel have done over the years.

We obviously disagree...and, apparently so does most jurisdictions
since there has been NO rush to enact local legislation as
permitted by HR-2346. I know I would totally oppose it in
my community and I am certain I could convince my town council
peers that it is a subject area best left to the FCC.

> I'm sorry, contrary to the apparent attitude of many in this

>in this country, because a few bad cops occasionally go over the edge.
> The solution is to deal with those out-of-control police officers,
>not throw out the laws or resist new ones.

We must certainly DEAL with the bad apples. We also need to
avoid creating situations that can foster such bad behavior
under the guise of "doing good."

> trying to do more familiar police duties.

Nonsense, Phil. Police enforce laws all the time without technical knowledge of the technology surrounding the laws they're enforcing. Police have been enforcing scanner laws for years without technical knowledge of radio. Likewise, they have just begun to enforce cellular laws, again without technical knowledge of radio. And local communities have enforced laws regarding antenna structures for years with little or no technical knowledge of radio.

And the same with laws outside of radio - police routinely enforce laws without technical knowledge of the technology surrounding those laws. An officer does not have to know how a bank operates to know that a bank robbery has occurred. A game warden does not have to know about ecology to enforce gaming laws. An officer does not have to know about vehicle design to write a citation for bad brakes. And I could go on and on with examples almost indefinitely.

The point is that it is absurd to suggest that an officer must have technical knowledge before he can enforce a law. As I have said before, all that is required of an officer is that he have enough knowledge to gather information and evidence properly. If "expert" knowledge is required for a piece of evidence, that evidence can be studied by 'experts" after it is gathered from the scene, and that "expert" can be present in the courtroom to give testimony about that evidence.

> Nonsense, Phil. Police enforce laws all the time without technical
>knowledge of the technology surrounding the laws they're enforcing.
>Police have been enforcing scanner laws for years without technical
>knowledge of radio.

First, there are only a handful of states that even have scanner
laws. Second, the enforcement of such a law is far less
technical because the radio is in plain sight during a
traffic stop. Third, in those states with scanner laws, the locals,
prior to federal preemption rling, DID abuse hams with mobiles
that had extended recieve capability.

>Likewise, they have just begun to enforce
>cellular laws, again without technical knowledge of radio.

I know of NO local enforcement enforcing cellular laws...
unless you mean the outright prohibition of using a
cellphone while driving. That, again, is an overt act
that is not "technical" in terms of determination by a
local.

>And local
>communities have enforced laws regarding antenna structures for years
>with little or no technical knowledge of radio.

That's because the issues and facts are NOT technical (as in radio
technical), but rather they are solely a function of physical
construction, dimensions, materials, etc. Enforcement of a zoning
violation regarding an antenna simply requires visual
appearances and need never involve any actual use of
that antenna (or antenna structure) for recieving or
transmitting.

> And the same with laws outside of radio - police routinely enforce
>laws without technical knowledge of the technology surrounding those
>laws. An officer does not have to know how a bank operates to know
>that a bank robbery has occurred. A game warden does not have to know
>about ecology to enforce gaming laws.

These are all totally "physical" evidence issues. None involve
technical competence...although gaming laws can involve
the very specific identification of species (e.g. shooting
a protected animal vs one not protected).

>An officer does not have to
>know about vehicle design to write a citation for bad brakes.

Police issue tickets for failure to stop. How can they
issue a ticket for faulty brakes unless there is a test of
those brakes. 40+ years of driving and I have never
met anyone that has been cited for "faulty brakes."
Bad example.

>And I
>could go on and on with examples almost indefinitely.

And none of these examples get into the issues that surround
operating a CB (legal or otherwise) from the confines of
someone's home. That is still something you won't address
with any common sense (IMHO).

And in the HR-2346 situation, you are (IMHO as well as that
of Phil Kane (sorry Phil, in another post I said Phil Karn))
wrong. Your comments and opinons so far fail to adequately
address just how the local LEO gets to first "gather any
evidence at all in situations involving private residences.

Cecil, I said they were "engaging what they _THOUGHT_ was a aircraft transporting drugs, with no flight plan filed and no response to radio challenges." An investigation is under way and it may take some time before we know all the details. However, according to reports, either the flight plan didn't actually get filed (contrary to claims otherwise) or flight plan didn't get listed properly.

As for the radio messages, the law enforcement personnel involved claim the pilot didn't respond to challenges. Now, that could mean that the law enforcement personnel are wrong, or it could mean that the pilot didn't respond (still a possibility), or it could mean that the pilot was transmitting on a wrong frequency. Whatever the case, the parts of the tape I heard didn't contain any attempt by the pilot to ID his aircraft - only an unidentified person yelling that they were shooting at them.

I'd like to add one more thing at this point - we still have to consider the possibility that this plane was indeed transporting drugs. Until the investigation is over, which I assume will include attempts to locate the plane, we do not know the whole facts surrounding this incident and should not jump to conclusions until we do.

> again - don't publish them.

I remember this issue has come up here before from time to time, and I agree with your point about the exact questions and answers not being published. While you don't want to make the exams at the "engineering" level, all Hams need to have a grasp of the basics however. Memorizing the answers, by highlighting them in a "study guide", then picking them out on the exam just does not do it. I am surprised by the fair number of Hams who don't feel "comfortable" without the means to memorize the exam questions. I feel as time goes by that more Hams are turning out to be "appliance operators" who can read the owners manual, but have little to no understanding of what goes on under the covers.

While real project construction many not be as common as it once was Hams should be encouraged to do at least some basic "paper" design work. I may not do much construction work for Ham Radio, I do plenty for work where I spend half my time in the lab, I do like to understand what make my equipment tick. In that light I get out the CAD software, calculator, and books to analyze something I'm interested in. I don't see where learning in Ham Radio should stop with the last page in the rigs owners manual.

> Of course your figures are most probably wrong.

Check them out yourself. Records indicate that twice as many little
girls as little boys are molested.

Since I have daughters, I am sensitive to this issue. Why is most
of the energy focused on molested boys when there are twice as many
molested girls? Is it somehow OK for little girls to be molested?
Is molestation of little girls more "natural" thus more understandable
and acceptable?

Yeah, Right! The FCC licenses a new ham to use high power supplied by
high voltage based on testing ol flawed and that he isn't required to
know the characteristics of his own hardware, and they have no
responsibility for it.

Why is testing needed at all?

So it's OK to send your kids out with the homosexual kind because there's only half as many of them. I think we understand where you're coming from.

Tell ya what Cecil.... You support me in keeping the homosexual predators away from my grandsons in the Boy Scouts and for darn sure I'll support whatever method you deem appropriate in kkeeping the heterosexual predators from your girls in their scouting activities.

But somehow your drift here is toward letting them all have at all kids in every instance. WHy is that?

Actually the no-code techs had only a slight impact in active
amateurs. Most of them are never active.

For example, at MFJ Enterprises dozens of employees became no-code
techs. Within a year, only ONE remained active.

Among the people I know, most of the no-code techs are wives of
amateurs who got a license to avoid cellular phone charges, or couples
who did the same. Now that cell rates have dropped, so have the
antennas.

No-code numbers look good on paper, but I'm sure most of them are
actually not active. We ran into that here in my county, when we tried
to get people interested in Skywarn and emergency communication.
Virtually all no-code techs who replied d said they were no longer
interested.

So an innocent pilot flying over Western territory in peacetime
deserves to be shot down simply for making a human error? Everyone
makes human errors at one time or another so everyone should be
shot? I think I understand you, Dwight, and it frightens me.

By all means, kill everyone associated with drugs. That will certainly
eliminate the problem. Killing innocents in the process is merely
acceptable collateral damage.

HUMOR IMPAIRED INDUHVIDUALS HIT DELETE KEY NOW.

The world is methodically being dumbed down by government efforts to protect us from stupid people.

Stupid drivers don't recognize the dangers of speed, so they drive too fast and kill themselves. The government regulates speed, so now more stupid people survive.

Stupid pedestrians don't know enough to not step out into a busy street, so they get injured and killed trying to cross the street. The government makes laws giving them the right-of-way, so now more stupid people survive.

Stupid parents don't recognize the value of childhood innoculations. The government makes them vaccinate their children before entering school, so now more stupid people survive.

Stupid hams don't know enough to keep their fingers out of 3KV plate transformers, so they get fried in their own juice. Dick would have the government protect them, and more stupid people would survive.

In the ways of Mother Nature, stupidity was kept in check because stupid people generally didn't survive to breeding age, thus our species tended to get smarter over time.

But stupidity begets stupidity, so we are being overwhelmed by a tsunami of stupidity. The tsunami is triggered by the government protection of stupid people, which allows them to survive to reproduce.

That is akin to grabbing a fan belt when the motor is running. I don't recall any Q&A on my driver's license exam about not grabbing a fan belt while the motor is running and not allowing children to grab it either.

Libertarians are against laws that try to protect people from themselves and laws for which there is no victim. Dick, like many liberals, advocate such laws to advance his personal agenda. He took lessons from Hillary Clinton.

That's good to hear, Dick. Why did you wait so long to say it? I was
always suspicious of males around my girls. Have you heard about the
rash of statutory rapes by high school coaches? Is that no big deal
to you?

> But somehow your drift here is toward letting them all have at all kids
> in every instance. WHy is that?

You're wrong about that, Dick. I advocate being suspicious of everyone,
not just homosexuals. You, OTOH, seem to advocate suspicion only of
homosexuals. Why is that, Dick? Do you have some hidden agenda?

You got it backwards, Dick. It is not OK to send your kids out with
anyone without checking the person out. Your little girls are in
twice as much danger as your little boys, or don't you care?

Maybe in wartime, but certainly not in peacetime over a "friendly"
country. But you have to admit, Hans, if we kill off the human race
in the process of protecting it from drugs, the drug problem will
go away.

The current trend toward protect-you-from-yourself government (put you in cuffs for not wearing a seat belt, for example) will eventually get us to the point of a over-reaching catch-all law which says:

"Everything not specifically prohibited is mandatory.
Violation of this rule is punishable by summary execution."

I'm all for offing the dope peddlers, but there was no evidence (zilch, none, nada, zero) that this craft was carrying drugs. It engaged in no evasive maneuvers, it was in contact with it's destination airfield by radio, and even a superficial visual flyby would have revealed that it was occupied by a couple of children and their parents.

Pure and simple murder, but it will be brushed off as a "regrettable accident".

Although the ship's commander is ultimately responsible for what happens to his ship, there has been NO discussion (at last any that I've seen or heard) regarding the reason for having civilians onboard. I'm reasonably certain Cmdr Waddle did not invite them, but that he was ordered ("required"?) to take them for a ride. Who is responsible for THAT?

The policy for siteseeing excursions needs to be dumped. If it wasn't for that, they'd never been at sea. Give'em tours dockside, it's not Seaworld, it's the Navy dammit.

In my view, the skipper and some crewmembers of Greenville are guilty of manslaughter. Through carelessness, lack of diligent seamanship, and lacksidaisical internal communications, this ultramodern attack submarine failed to detect a 500-ton ship steaming in their oparea, and subsequently sank it with loss of 9 souls embarked. CDR Waddle got off way too easy, no matter how many crocodile tears he sheds on "60 Minutes".

I *think* that when an aircraft is challenged by hostile planes, it is recognizable internationally(?) that one can slow down, drop flaps, and landing gear (if any) to signify surrender????? Would this have been the correct thing to do by the pilot of the aircraft being challenged to prevent being shot down? Anybody got more details?

>Although the ship's commander is ultimately responsible for what happens to
>his ship, there has been NO discussion (at last any that I've seen or heard)
>regarding the reason for having civilians onboard.

Carrying civilians in warships, giving them rides in bombers or tanks, and other similar practices go back generations and are done for very good reasons.

Congressmen are embarked to impress them that the defense dollars are well spent, and to get them to vote favorably for new programs.

High school guidance counselors are taken to sea to see the high tech training available to their students.

Parents/spouses/children of sailors are embarked on "family cruises" to involve them in the environment where their family member works and to make them "part of the Navy team".

Media representatives (TV/newspaper reporters) are embarked to gain favorable press for the military, useful in recruiting campaigns, etc.

Entertainers are embarked on deployed units during the holiday season for morale purposes.

I could go on and on with good reasons why civilians may be embarked in warships.

None of those reasons, however, absolve the ships' captain and crew from the proper and vigilant exectution of their duties. Period.

As another noteworthy example, look at the statistics since code was
reduced.

We gain ONLY 6600 new amateurs (1%) in the last year since the code
was reduced. We UPGRADED 30% of the amateur population.

Clearly, there were no massive lines of people waiting to get in but
hampered by testing. Just as clearly, we gave a "free upgrade" to
somewhat less than 1/3 of the amateurs we already had.

Face it folks, the problem isn't testing or anything else. It is
social. The cure isn't going to be giving something away that no one
wants.

Is it a choice of remembering exactly what to do during a stressful
situation or death by being shot down? Whatever the pilot did or
didn't do, he's only a human civilian noncombatant and may be ignorant
of military aircraft protocol. The fault and blame lies squarely with
the drug policies of the United States and the support of an abjectly
evil agenda which is power, control, and the destruction of individual
rights. Today it's drugs, tomorrow it will be T-bone steaks and SUV's.

> his job well (even if not perfectly).

No they did not do their job well.

The crew and the skipper *failed miserably* in this evolution, to the extent that another ship and 9 embarked souls are at the bottom of the Pacific.

The facts are that this crew and skipper, with the facilities of an ultra-modern attack submarine at their disposal, failed to recognize a 500-ton surface vessel steaming within easy acquisition of their active and passive sensors, including (but not limited to) the Mark-I Eyeball.

A number of people were obviously asleep at the switch, and *not* "doing their well" at all!

And how is said "expert" going to evaluate something that is
volatile, i.e. the frequency and power of operation at the time of
observation, without being "on scene"? No "on scene" determination
of improper operation, no probable cause for a seizure and/or

charge, let alone entry.

I was raised in a tiny burg hard by the city limits of Philly. Five
similar surrounding PDs pooled resources to support the communal
police dispatch facility which in the 40s & 50s opersted on some red
Chebby rear fender ball mount & 8 foot whip freq. or another.
>
So anyway Henny Carr the only fulltime cop in town and he lived just
down the street caught wind of the fact that I was eavedropping on
that freq, I guess maybe because I biked my way to one too many
fender-benders looking for blood & gore. Henny was also a bit tired of
the neighbors telling him to do something about my felonious assaults
on their TV reception. Henny caught up with my Dad one day and told
him that I shouldn't be doing either, etc. Was not a good day for
wn3yik.
>
Thus it came to pass that my plea bargain deal was cut: I padded
Henny's living room AM broadcast rcvr up the dispatch freq so he
could listen too and the rest was forgiven.

Absolve? No. Interfere? Yes.

The only way to impress civilians is to give them "live" rides? No.

These are machines of war with incredible power for destruction, not Disney attractions. If a ride is necessary, give it to one or two at a time when there is a REALLY good reason (although I can't imagine a reason that good), not a dozen or two random thrillseekers all at once.

It originally addressed amateur transceivers which have out-of-band RX of public safety frequencies. The FCC's RESPONSE does encompass scanners also in that they found that RX reception of public safety frequencies (HOWEVER RECEIVED) by licensed amateur radio operators WAS for the "public good." The dispute that gave rise to the ruling was that of an amateur transmitter with expanded RX (i.e. public safety band included) installed in a vehicle and that local jurisdiction's law banning "mobile scanners." The local jurisdiction claimed that the transmitter, by having the expanded RX, violated its scanner law.

Try reading the BACKGROUND of the notice.

Actually, it's simply a presumption of motivations. Others on the list
have no expectation of personal gain from changes in the requirements.

> Some will see
> that presumption as the biased opinions of those who would

So as long as it's not our ox being gored, everything is just fine?
That is the way fascists operate. Divide and conquer. Does any thinking
person realize that if hams are the only group left with scanner
privileges, those privileges can disappear without much of a whimper.
The ploy is to take away scanner privileges one group at a time.
In the meantime, hams can feel really special since they will be the
last group to lose scanner privileges.

Testing never totally prohibits stupid behavior.

The state licenses drivers who, immediately upon
being licensed can go buy and drive ANY automobile
they want that is "street legal" which could be
a HIGH POWER Porsche, Ferrari, etc and ten go drive
it at excessive speeds. There is NO liability in such
situations attached at all to the licensing entity.

Cheers,
Bill K2UNK

It's a good thing for Hiram that he isn't around. If he were around, the present ARRL board of directors and League employees would seek him out and attempt to destroy him. They won't accept anyone with an opinion on amateur radio that differs from their opinion. The present ARRL leadership would feel threatened by Hiram because he would not agree that their dumbing down amateur radio policies would be a bennifit to the service. So, they would need to destroy him in order to continue their subversive activities.

A good point. A modern engineer who needs to design a tube circuit will find no shortage of reference material and can probably whip one up pretty quickly. It is certainly easier to design a tube amp than it is to design some of the modern VLSI ICs.

There is a big difference between asking that requirements be changed and
asking that people be given priveleges without meeting the priveleges.

Are you suggesting that those who serve on the NCI Board should not have the
right to petition their government for redress?

I am glad you added the qualifier. I will offer that even those who stand to gain may not have that gain be their primary reason for seeking change. Motivations are really impossible to know, and in all cases where I have seen people here try to proclaim the motivations or others, that proclamation (happenstance?) matches their agenda perfectly.

>However often repeated, it still does not make it any less true. Closing the
>pools to SPECIFIC Q's and A's will force prospective licensees to KNOW
>something about the subject matter.

How would you address the inevitability of these "closed" pools, sent to thousands of VEs, being posted anonymously and thereby "opened?" I have yet to see what I consider to be a workable answer to that one. Back in the days of "closed" pools there were about 2X the number of questions in the FCC pool than would appear on the exam. Half of the time, when one failed a test and went for a retest, he or she was given the exact same test. "Closed" pool? I think not.

Even so, it is easier to learn the fundamental material, at least to the extent that I did when I passed my General, than it is to learn over a thousand questions without understanding. If you disagree, prove me wrong by learning a thousand Russian definitions and I will cede the point.

> (2) Foster and support the "Elmer" concept. Local clubs and individual
>volunteers who are ready, willing and able to walk the student through the
>hoops.

This is happening right now, Steve. There is always room for more, but I know of few hams who think that Elmers are not important. They all have the ability to be Elmers right now, but are choosing not to. Just what would you do that would make a significant number of hams who are not Elmers right now choose to do so?

> (3) Peer pressure of non-compliants. Just like it says. If someone
>doesn't want to "play nice", we let them know. I whole heartedly agree with
>those who suggest taht many "newcomers" don't ant to be subjected to the
>goings-on of some ner'-do-wells. And if this doesn't work, enforcement will.

This is happening right now, too, and that is probably the biggest enforcement problem that the FCC has right now. Some of this "peer pressure" consists of carriers and other unwanted interference to those who dare to say "10-4" on the local repeater.

>No one want's to swim in a pool that has a certain brown effluent in
>it...Jammers and the "Liberty Network" idiots (and likeminded jerks) are OUR
>brown effluent.

If the Liberty Net folks jam ongoing communications, they are rulebreakers. If they fail to ID as required, they are rule breakers. But as much as I disagree with some the things that some of them say , I also believe that our Constitution gives them the right to speak their minds. The biggest rules violation related to nets like the Liberty Net is not being done by the net participants, from my listen.

> (4) Encourage club PARTICIPATION. Thee are lot's of folks who get an
>Amateur License for no other use than to pass "honey-do" traffic, and that's
>fine, I guess, but what a waste!

Ditto my comments about Elmers. Those who are not participating in clubs have every opportunity to do so right now, and are choosing not to. What would you do to get people who are making that choice right now to make a new choice?

> Whatever you do, it's RADIO! Have fun.

That one just might work.

Liberals have rights, real and imagined. They want government to pass laws that guarantee that no one will violate any of their rights. They have no responsibilities, it is up to government to take responsibility for everything.

Libertarians have rights, real and imagined. They want government to pass no laws that would violate their right to do what they feel is right, which is up to their own individual interpretation. Responsibilities? They take responsibility for only those things that would not hinder the exercising of their rights.

Conservatives have rights, real and imagined as well as responsibilities. They want government to pass laws to remind us the difference between our rights and responsibilities. There can be no freedom without responsibilities.

Power comes not from the freedom to do what you want but from the freedom to do what you ought.

And, Cecil, people paralyzed from the neck down are suffering from an affliction, either from birth or accident, right? They are not able to fly airplanes and cannot pass the requirements to get a an ATR rating, or get a job as a pilot. So using the theory of not excluding a group, then we must allowed paralyzed men and women to fly airliners? Out of that group of people, we may find a 'few' that could overcome the obstacles, maybe using special control devices. Yet, finding a way to accomodate those few would be prohibitively expensive, so, in a sense, we are "discriminating" against handicapped people. Still, people who have disabilities, or limiting factors in their lives, learn to accept these limitations, and go on with life. That is what the "gays" should do in this case--realize why such restrictions are in place, realize that the risks are too high not to do our best to keep even one abuser away from the kids, and find other adults of *like* (shudder) propensities instead of insisting on access to Scouts. But they are NOT going to do that. I still wonder why it is just SO important to allow "gays" to be Scout leaders. Yet, knowing that assaults HAVE occurred, organizations have been sued, STILL people want to open the doors to the kids to queer leaders. Come on, fellas, we KNOW why they want in. Organizations that have been sued by parents have put into place youth protection policies and background checks which ferreted out a surprising number of undesirables. Civil Air Patrol's Cadet Protection program is modeled on that of the Scouts--almost word for word. Adult members are required to be fingerprinted and submit to a full FBI background check. If there is ANYTHING to indicate homosexuality, child abuse, felonies, or other brushes with the law, that person doesn't get in. When these things began to be put in place, the fags and perverts screamed, "AAAAACK"! "NO FAIR"! "DISCRIMINATION"! "CIVIL RIGHTS"! Simple and plain: they want access to our "cute" little boys! And I say NEVER, NEVER, NEVER, NOT ONLY NO, BUT HELL NEVER!!!!!!!!!!

Unfortunately, there is no way to protect ALL every minute of the day. The never-ending (I'm afraid) slippery slope is the liberalism, the slacking and tearing down of morality, the things that were once considered wrong are now considered right (divorce, excess drinking, headlong pursuit of money, sex outside of marriage, and, of course, being queer). I often wish it were 1946 instead of 2001. All those things went on then, but it wasn't "approved" of. Now it's just BAU (business as usual.)

Interesting, but incorrect, to say the least. I haven't read the article, but I can't imagine what the author thought was going to replace code crunching. While the Internet certainly changed a lot in the everyday life and technology, that is nothing compared to what's coming when the fiber optics gets into our homes and replaces telephone wires and coax cable. All will be video and video will be all. In order to process that enormous amount of digital video, someone will have to write the code. Unless the author imagined that computers will write the code themselves, but this is more of an A.C.Clarke novel.

I don't think ham radio is going anywhere. We may witness a dramatic drop in numbers and activity when the older generations begin to die off, but I have a feeling the developing countries may keep it alive and well. Who knows - maybe there will be a huge pile up of BY and ZA ops trying to work a rare WA7 call.

And that _THOUGHT_ justifies shooting them down? I guess if someone
THINKS you are transporting drugs, you'll feel that shooting you
is okay too?

> with no flight plan filed and no response to radio
>challenges." An investigation is under way and it may take some time
>before we know all the details. However, according to reports, either
>the flight plan didn't actually get filed (contrary to claims
>otherwise) or flight plan didn't get listed properly.

Uh, CNN has a copy of the flight plan on their web site, obtained
from the flight service company in Iquitos it was filed with. Flight
plans are apparently required for all flights leaving from Iquitos,
so the air traffic control that cleared them would have known of
the flight plan. If CNN could find this, don't you think that the
people who were going to blast them out of the sky could have
been bothered to look as hard as CNN did?

I don't know about those reports you put so much faith in, either.
The original report said the plane had been in both Brazil and Columbia
prior to the shooting, but there doesn't seem to be any evidence that
the plane ever landed anywhere outside Peru. The flight plan had the
plane flying from the Amazon River at Iquitos in Peru, to the Rio
Yavari, which is the border between Brazil and Peru, at Islandia,
Peru. The purpose of the trip was to visit the Peruvian consulate
in Benjamin Constant, Brazil, to get a visa for the 7-month-old girl
who was shot. The plane flew them to the border, which they crossed
on land. The only confusion was that the flight plan was amended
with the tower in Iquitos when they left to include an othernight
stay in Islandia, rather than a same-day round trip (the flight
service company also has a copy of the letter requesting this).

> As for the radio messages, the law enforcement personnel involved
>claim the pilot didn't respond to challenges. Now, that could mean

>that the law enforcement personnel are wrong, or it could mean that
>the pilot didn't respond (still a possibility), or it could mean that
>the pilot was transmitting on a wrong frequency. Whatever the case,
>the parts of the tape I heard didn't contain any attempt by the pilot
>to ID his aircraft - only an unidentified person yelling that they
>were shooting at them.

The recording you are hearing was made by air traffic control at
Iquitos with whom the plane was in routine contact with, having been
handed off through air traffic control in Columbia (the plane was
flying along the Amazon, which is the border between Peru and Columbia
for at least some of the flight). Air traffic control in Iquitos
report that they were in contact with the plane, and knew who it
was. The plane was transmitting on precisely the frequency it was
supposed to be or the air traffic center that was controlling the
plane wouldn't have had a recording. Neither Iquitos nor Columbian
air traffic control reported ever hearing a challenge to the plane
on their frequencies, so there is a lot of independent evidence that
the pilot was listening to his radio on the frequency he was supposed
to be on, and no evidence that he was ever challenged on that
frequency.

> I'd like to add one more thing at this point - we still have to
>consider the possibility that this plane was indeed transporting
>drugs. Until the investigation is over, which I assume will include
>attempts to locate the plane, we do not know the whole facts
>surrounding this incident and should not jump to conclusions until we do.

Of course we will have to consider the possibility that you are
the drug dealer they were smuggling for too, since while the
reports we've had didn't mention anyone who thought that either the
missionaries or you were smuggling drugs, that is a negative
which is still hard to preclude with certainty. Even if they
don't have drugs with them they could have dropped them into
the river earlier. But let's consider what independent evidence
we do have. The plane was on a route that was consistent with a
previously filed flight plan. It was flying at 4,000 feet in broad
daylight above the Amazon river, which is exactly where you would
expect any float plane following that flight plan to be. It was
in contact with air traffic control along the entire route, the air
traffic control involved confirms this. The pilot was a missionary
who'd been in Peru for 18 years, the passengers were a missionary
family with two young children who had a verifiable legitimate
purpose for making the trip. It is still possible that they were
transporting drugs for you, but it is hard to see how anything
they did would make this conclusion so certain that they deserved
to be shot down out of the sky and the survivors strafed in the
river after the emergency landing.

And in fact all of the above is from reports from the same media
you heard your report from, just discovered after the official government

version you seem to be relying on. That first report also said the monitoring plane was staffed by "CIA contractors", implying at least a certain arms-length relationship to the government, when in fact the "contractor" turned out to be the US DoD which owned and operated the plane and which is even on record (via FOIA) as being uncomfortable in the role because of the possibility of shooting innocent people. And, of course, only news about Americans makes American news, so we have no idea how many innocent Peruvians, Columbians and Brazilians died this way. Except we do know that the program was suspended for a time in 1997 until congress passed a law absolving the monitoring plane crew of any responsibility for accidents for which the Peruvians were held responsible, so it is a safe bet this wasn't the first such accident.

I've seen estimates that 35,000 people die drug-related deaths in the US every year. Of these the number who die from actual illegal drug use (who the laws were presumably designed to protect?) is about 6,000, with the remainder dying from violence often associated with the distribution, sale and purchase of drugs. And we can surmise that many of the latter deaths are a direct consequence of the laws against drugs since the country has been here before; violent crime in the US dropped by 63% in the year following the repeal of prohibition. I don't use those drugs, and hence couldn't personally care less whether they're legal or not, but I'm still at risk because of the violence. The drug laws are a cure that seem to be worse than the problem being cured. They don't help people who use drugs to stay out of harm's way, and they put people who don't use drugs in harm's way. Like the people in Peru.

The same way police officers have been enforcing other laws for years without technical measurements or technical knowledge, Phil. The city (county, or whatever) writes a law that defines what a violation is and the officer enforces that law. Now, I have a question for you - why would an officer have to have technical knowledge of radio to enforce a simple CB violation when that same officer does not have to be an expert on anything else to enforce the many other laws out there? If police officers have to be experts on everything relating to the laws they enforce, there could not possibly be any law enforcement in this country. Your suggestion that enforcement of the potential CB laws will somehow be entirely different than enforcement of other existing laws simply doesn't ring true.

>For rules, regulations, operating, and safety.

I'll differ with that by reducing the requirement to just regulation.

The FCC's lawful task is to regulate US civil (non-government)
radio. The FCC has determined that licensing of individuals of
certain RF emitters along with tests of those individuals is in
their task of civil radio regulation.

Test question content, while approved by the FCC, includes
operation and safety. The only direct safety aspect is in the
(relatively new) questions concerning regulation of RF fields
that affect the human body. There is no other regulation
concerning the safety of operators who expose themselves
to lethal voltages or who fail to take precautions on antenna
erection and thereby injure themselves. The test questions
on health and safety other than RF exposure fall under the
"good operating practices" general questioning group.

Much of the hard-line arguments in here revolve around the
"academic" aspect of the license test itself as if it "proves"
some form of "expertise" in radio..."proof" of "qualification"
(credentialism) above and beyond others by "upgrading."

The FCC is not an academic body. It uses licensing and
the tests for licenses as a means of regulation of US
civil radio. Hard-line credentialists exaggerate the
regulatory testing well beyond its intended purpose.

US amateur radio is an activity carried on without
pecuniary interest, hence the name "amateur." It is a
hobby which requires regulation due to the physics of
radio waves. Amateur radio is not professional radio
but so many hard-liners desperately want to be just
like professionals in an amateur environment.

Ed:

It would be interesting to learn how many prospective Technicians actually
read (note I didn't say "studied" or "learned") the 100-plus pages of explanatory
material, as opposed to those who merely learned the right answers to the
questions. I learned most of my electronics by building homebrew projects
out of magazines (stuff like 6-transistor AM Broadcast radios, light dimmers,
power supplies, motor speed controls, etc.) and a couple of dozen Heathkits --
including two HW-8's and an HW-101. These were mainly kits I built for
other people -- including 100% of the ham gear! The only Heathkit I ever
built for my own personal use was that great little "micro-matic" keyer with
the capacitive "touch" paddles! I sold it to KA3T; wish I had it back! Rick -
are you out there?

Anyway, I digress...

You're right, the study guides are bigger today than they were in the Jurassic
era when you were first licensed. However, I am willing to bet that the average
New Ham of today knows a lot less about the technical aspects of the hobby
than you and your contemporaries did. Back then, your "Elmers" patiently
showed you how to neutralize the finals in your transmitter, or sat with you
when you checked into your first CW net. Today, "Elmers" are called on to
read instruction manuals for brand new HT's so they can help their "students"
figure out how to set the repeater offset and PL tones!

>It is certainly easier to design a tube amp than it is to design some of the
>modern VLSI ICs.

I was only making a point on what is available in current production of vacuum tubes.

I will differ in your last sentence in that there is no comparison between "a tube amp" and a "modern VLSI IC." Very Large Scale Integrated (VLSI) devices do much more than what "a tube amp" can do. A better comparison is between a tube amp [amplifier, sic] and a bipolar or field-effect transistor.

On the other hand, the necessary manufacturing equipment and technology needed to make a transistor is far more complicated than for any vacuum tube. That same capital equipment investment permits true mass production of semiconductors, far more than was possible with vacuum tubes.

Long-timers familiar with tubes but not familiar with semiconductors will invariably try to compare semiconductors with tubes using tubes as a baseline. That is not a personal fault but it simply shows an inability to understand the circuit possibilities of semiconductors if not a lack of flexibility to accommodate circuitry not bound by tube architectural rules.

In article <9c55qt$h6f$0@208.206.142.94>, Dick Carroll <dixie@townsqr.com>
writes:

> A great eulogy to HPM, but the last word is on page 15, citing the
> Old Man himself in QST September 1927:

<snip>

Eulogy? According to my 1978 ARRL Radio Amateur's Handbook,
Hiram Percy Maxim was president of that organization from the
start in 1914 to 1936. Unless Maxim's title was "president for life
and beyond," he was still alive by 1936.

1936 is five years before the USA became directly involved in World
War Two. 1936 is 65 years ago from today. Those born in 1936 are
now eligible for retirement benefits.

I have no qualms on praising someone who started the ARRL. I do
have quite a bit of a problem with those who long, yearn, or
desperately desire a return to the past, complete with all the
limitations of technology, the limitations of fewer HF bands of
65 years ago. The standards and practices of 1936 cannot be
taken verbatim for the year 2001.

My father and my father in law were both born in the year 1900.
That year was one year prior to Marconi's demonstration of the
first radio transmission across the atlantic, three years prior to
the first successful sustained heavier-than-air flight by the
Wright brothers. Both lived to watch Armstrong and Aldrin
set foot on the earth's moon over live television. What an
exciting time for a single man's life experience!

Dick Carroll wants to return to the past for the "simpler" time of
US amateur radio. He can do so less a number of conveniences
and medical advances available to humans of today. He can do
so using only ordinary, less-advanced vacuum tube technology
of the 1930s, using radio equipment manufactured by National
Radio or Hallicrafters. He will have to depend on OOK CW when
using simpler equipment in order to work above the inherent
higher noise level of receiver first-stage tubes. He will have to
depend on CW for transmitting at any high power since so few
in the 30s could afford the massive audio power amplifiers
needed for AM of those times. There would be little or no VHF
equipment possible for hams of the 30s (Yagi's parasitic-
element beam antenna paper would not be available until after
WW2) due to lack of tube technology and lack of theory of such

"ultrashort" wavelengths.

Return to 1936 and a "simpler" life? Not for me. I've been privileged to live through most of a technological explosion of knowledge and physics involving electronics and radio. No way would I want to miss such an opportunity by going back to a "simpler" life in the 30s.

I've adapted and continue to adapt to the new, have learned and continue to learn, have appreciated and continue to appreciate the advances, developements, and some utterly new things in radio. I'm sorry that some in amateur radio cannot do any of those. Their loss. I love TODAY and can't wait until tomorrow!

>The city (county, or whatever) writes a law that defines what a
>violation is and the officer enforces that law.

In accordance with the enabling legislation a city passes an
ordinance that no non-licensed operator may transmit outside the
authorized 40 CB channels or with transmitter power exceeding 4
watts output. That's what the enabling Federal legislation is all
about..

>Now, I have aquestion for you - why would an officer have to have technical
>knowledge of radio to enforce a simple CB violation when that same
>officer does not have to be an expert on anything else to enforce the
>many other laws out there?

An officer investigating any crime, say a robbery, still has to
evaluate "what happened" in terms of the elements of the crime, i.e.
did the perpetrator take property from the victim by force or fear
(or whatever that state defines as the elemenst of the crime).

How can an officer enforce the radio law, i.e. determine if a
transmitting station is in violation of that ordinance, without
making technical measurements and evaluating the results of those
measurements?

And to open another can of worms which has barely been touched on,
how will that officer conclusively determine thzt the suspect is in
fact theperson making the suspected transmissions? Will the officer
be equipped with a very proprietary (and long out of production) FCC
Model DR-27 fit-in-the-palm-of-the hand "snifter" (directional
receiver) which can determine which of two antennas five feet apart
(say on two adjacent buildings) the signal is coming from? And know
how to use it and interpret what he finds?

As I said earlier, if the officer is going to enforce radio laws, he
has to be qualified to understand what he is doing. And when those
measurements are made and evaluated, the qualifications of the
maker/evaluator bear directly on the credibility of those

measurments and conclusions. Any decent defense attorney will jump
on that first thing.

Must be their training.
'Bout 40 years ago I spent a couple Army years stationed in New Jersey within commuting distance of NYC. I was riding the local commuter bus into Port Authority Terminal going on leave one busy, congested Friday afternoon. The long line of busses exited the Holland Tunnel and continued to the first intersection where they turned right to go the last several blocks to the terminal. The traffic cop at the intersection was busily directing all the busses to make the right turn, but when my bus got there, he inexplicibly directed the driver to go straight ahead. Well, the driver didn't WANT to go straight ahead, he was on on final approach to the terminal, almost had it in sight, and he wasn't about to be shunted away, deep into the city, away from his destination, for no obvious reason. So he made the right turn same as all the other busses had, against the traffic cop's directions.
But Alas, we had to stop in a short distance due to traffic at a red light ahead. Of course the traffic cop was right there, rap! rap! rap! ing on the bus door. The driver opened it, and the stream of invective was immediate and at a high dB level. But - the light ahead turned green, the bus driver closed the door in the cop's face and away down the street we went. But - again, traffic stopped at a red light ahead halted us quickly. Again, Rap! Rap! Rap! on the door. Again, the driver opened it. This time instead of the jabbing finger on the hand accompanying the loud invective, the hand held a waving Service Revolver, the dB level was louder, if that was possible. And .....again, the traffic light ahead turned green, and damned if the driver didn't again close the door - but this time, he trapped the cop's hand and arm, gun and all, and literally dragged the cop down the street, with the arm, hand, waving revolver, all too visible to the stunned passengres - to yet another red light where we again stopped.

Where they came from I have no idea, but suddenly the bus was swarmed with blue uniforms. They pounced on the driver and dragged him away,

leaving the bus with engine idling and loaded with passengers, sitting in the middle of the busy New York street.
By that time we were within a few blocks of Port Authority terminal, and I had another bus to catch, so I grabbed my bags and hiked the rest of the distance.
I later read in the paper that they charged the driver with a long list of offenses including assaulting an officer.
Whew.....

I didn't have any exposed ham gear and I didn't run high power while
I had kids, Dick. It is the responsibility of anyone who runs high
power to deal with the associated problems. It is not the responsibility
of the feds. You do-gooder liberals are always poking your noses into
other people's business for the purpose of satisfying your personal
power trips.

Please post some details about kids who have gotten hurt while messing
with their Dad's ham gear.

You should try reading what I said, Dick, instead of pulling meanings
out of your posterior. What I have said is to check out and judge people
as individuals whether they be homosexual, heterosexual, or whatever.
Your best heterosexual drinking buddy may have his sights set on your
young daughter.

Well, now you have me confused. If homosexuals should be barred because it might save a little boy from being molested, shouldn't heterosexuals be barred because it might save a little girl from being molested? Don't little girls matter as much as little boys?

Incorrect, Kevin. Libertarians believe that the use of force and the threat
of force in human interactions should be illegal, i.e. when there is a real
victim of a crime, e.g. an armed robbery. We believe that victimless crimes
should be repealed. Victimless crimes are the path toward fascism.

Your seemingly don't-care attitude toward the possible molestation of
little girls is very troubling. How about keeping "even one abuser"
away from little girls?

Some of your colleagues have claimed to have all sorts of "rights" with respect to transmitting on the airwaves. Among them are people who had not "conformed to the requirements" they sought to change. That was the truth I saw in the comment.

If it wasn't at least many of them, there would be no market for the book. The question pools are downloadable for free.

>However, I am willing to bet that the average
>New Ham of today knows a lot less about the technical aspects of the hobby
>than you and your contemporaries did.

I gave this some thought a year or so ago when I was standing in front of a Tech class, teaching them about the E and H fields in the near-field of antennas. I don't think that my Novice test asked any questions about antennas at all.

> Today, "Elmers" are called on to read instruction manuals for brand new

> offset and PL tones!

I have fiddled with a few of these new radios, Larry; I am not sure I could easily set a non-standard offset on all of them, even with the manuals. The menus on these things can be several layers deep, with undocumented features.

It makes as much sense to claim that one can easily memorize 1000 Russian
defininitions without understanding as it does to claim that one can easily
memorize 1000 questions about Amateur Radio without understanding.

I can understand why you choose to call it a "mind twist" instead of doing to
demonstrate that your claims are right, though. I would say "good try," but it
really was pretty weak.

I think we can settle this one from the historical record. Dick, you have been a ham longer than I have; can you recall any instance where the child of a ham was electrocuted by touching the uncovered high voltage of a ham radio apparatus? This certainly would have been reported in one or more of the ham rags.

>>Sorry, no sale. The NCTA have always used the need to "advance
>>the state of the art" -- presumably in digital communications technology,
>>as a primary reason to reduce or eliminate the Morse code testing
>>requirement…as if the two were, indeed, mutually exclusive.

>Incorrect.

Leonard H. Anderson is once again LYING. Lennie, YOU YOURSELF have argued
that if the code test were completely dropped, all these scores of longing
engineers would flood the Amateur Radio ranks and dramatically improve "the
state of the art."

What I can't understand is why would these guys be waiting for the
opportunity to do this for free, when they could make money at it in the course
of thier employ?

>>The claim
>>had always been that the code test requirement was discouraging
>>brilliant, computer-literate young people who would magically transform
>>the landscape of amateur radio communications technology if only they
>>had the fetters of this time-honored mode removed from them.

>Incorrect and an attribution of the PCTAs, not the NCTAs. False.

Leonard H. Anderson is once again LYING. YOU YOURSELF have made these
very assertions. These were some of the very first exchanges we had, Lennie.

You are such a lying idiot that you can't even keep your OWN lies
straight.

>>They have claimed the Morse code, and it's testing requirement, to be
>>everything from "lame" to "ethnic cleansing" -- and insisted that those
>>who support continuance of the testing requirement were not in step
>>with the "inclusive" nature of this hobby, and, therefore, politically
>>incorrect.

>Factually and logically incorrect. NCI is advocating only the
>elimination of the morse code TEST.

Only correct as applied to NCI. The rest is completely and unalterably
correct when applied to YOU, in as much as you are dead center in the "NCTA"
camp and have USED such phraseology in many of the thouands of posts you ahve
polluted this NG with. To assert otherwisewould only be ONE MORE nail in the
"Lennie's Lies" coffin.

>>You would have to undo over a decade's worth of Fidonet/Usenet debate on this topic to >>convince me otherwise.

>This is not Fidonet. This is not a BBS net of any kind.

He did not mention ANY "BBS", and his comments vis-a-vis "Fidonet/Usenet" were correct. How would you claim otherwise?

>tRoll calls himself an "expert" without any fear. Not a problem.
>The problem is that no one else considers him an expert.

Pot/Kettle/Black.

>>The link between technical incompetence and Morse code skill is the
>>very foundation of every argument that has ever been made against the
>>pre-Restructuring status quo in code testing.

>Incorrect.

NOT "incorrect". YOU YOURSELF have claimed that a great number of persons, yourself included, persumably, have not become licensed because of thier intolerance to the concept of learning the Morse Code.

This is an archived fact.

>>This is the truth, the only truth, and the only reality.

>Delusion.

"Delussion"...?!?! Coming from YOU?

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

Perhaps not a practical statement, but no more "delusion(al) than anything YOU have posted!

>Morse code in its present form of aperiodic on-off signals
>representing English language alphanumeric and punctuation
>characters is approximately 157 years old. Given the highly
>untechnical nature of that, it is unlikely to see any "growth"
>in technology as applied to radio.

And dropping a line with a hook and some form of bait into water in order to coax a fish onto that hook is centuries old, but it still works.

>tRoll is advised to follow his own words

Pot/kettle/black...AGAIN!

>There is no longer any valid reason to keep a code test for amateur radio
>licensing.

The law, Lennie. The ITU says it's the law. The Congress of the United States has ratified the treaty, thereby MAKING it the law of the United States. The FCC has said, officially, that it will "revisit" the code testing issue when they are no longer bound by the treaty. FCC officials, including Riley, have said in publically made comments that they have every expectation that

Morse Code testing will be dropped shortly after the treaty is ammended and ratified.

That, however, has not prevented or detered YOU from continuing to charge full-bore at windmills, now has it?

>Deny that if you will, but it IS the truth.

Double on you.

NCI Director Bill Sohl says:

>Give us one real reason to build their own radio?
>It sure can't be the economics, it sure can't be
>to get a better rig, ...

This is from the same fellow who thinks "8 feet above the roof" is an acceptable height limit for amateur antennas.

There are any number of "real reasons" (what is an un-real reason, BTW?) an amateur might want to build their own radio.

..maybe they want to experiment with a new DSP filtering scheme.
..maybe they'd like to try class D amplification.
..maybe they have a new idea for a "mainframe radio" architecture.
..maybe they were just bored on a cold Saturday afternoon and wanted something to do to warm their hands.
..maybe they took 97.1(b) seriously.
..maybe they wanted to revoke their membership in QCAO.

Are you typical of other NCI Directors, or are there some who understand the difference between Part 95 and Part 97 radio services.

So, did you write to them and explain what's wrong with this picture?
Or are you bitching here because it's easy?

In any case, the FCC doesn't have any reason to tell the states what
to do unless the person is already licensed at the federal level.

The states are free to make laws governing roads and road vehicles all
they want. How else can you explain California's separate
environmental regulation for cars? And likewise, states can tell you
what you may and may not transport in that car.

So this battle has already been divided up at the state level. The
only place to win it is at the state level. Unfortunately, I don't
live in that state. The day Maryland decides to do anything this
stupid, they'll hear from me. Unfortunately, a resident of the State
of Maryland has only so much pull in other state houses...

Ah, reverting again to your favorite theme, the whatchacallits- ad hominies.

> Please post some details about kids who have gotten hurt while messing
> with their Dad's ham gear.

Who said it has to be the kids? They're just one of the many REAL possibilities involved, the scope of which cannot be predicted. Hence the safety factor involved necesary in licensing. Understanding is necessary. Word associations made to match a group of words which the testee has not learned the meanings with questioins which he similarly has not learned the background material for do not teach concepts.

Texas doesn't (yet) have a scanner law. When and if we do,
I will certainly contact my representatives. Time was when
it was legal to collect and listen to any RF. IMO, that's
the way things should be. If someone doesn't want their
RF transmissions to be monitored, they should encrypt them.

>need to destroy him in order to continue their subversive activities.

I enjoy a cordial relationship with many current and former members of the ARRL Board, current and former ARRL officers, and various League employees and other ARRL volunteer leadership types.

My opinions on amateur radio matters often differ markedly from theirs, but so far none of them have tried to destroy me, members of my family, my pets, or my property or reputation.

I have noticed they sometimes seek me out, but rather than attempt to destroy me they solicit my opinion. They have not seemed threatened if that opinion is not the same as theirs.

I'd be very interested in hearing specific details where ARRL has destroyed another ham, and the details of the subversion which followed.

73, Hans, K0HB

PS: Maybe they are using microwaves or infrared energy against me, like someone is using against KH6UH?

April 17, 2001

Mr. Jerry P. Wine
98 281 Ualo Street
Honolulu, HI 96701-4644

RE: Warning Notice--Amateur License KH6UH

Dear Mr. Wine:

On March 22, 2001, we notified you that information before the Commission indicated that on March 12, 2001, you used the frequency 146.52 MHz, and the WH6CZB frequency of 148.80 MHz, for lengthy broadcasting, effectively preventing the use of those frequencies by other Amateurs.

In our letter we warned that if such operation were repeated, we would initiate enforcement action against your license. Pursuant to Section 308(b) of the

Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), we required you to respond to our letter within 20 days. Finally, we notified you that you would be expected to comply with any requests by the licensee or control operator of the WH6CZB repeater not to utilize the repeater system.

As near as we are able to determine from your responses dated March 27 and April 11, 2001, you stated that you hold several patents, are an inventor and that several acquaintances who saw a patent application of yours passed away unexpectedly. You stated that you considered such situation to be an emergency because you were being targeted with microwaves, infrared energy, or poisoned, and therefore you utilized the WH6CZB repeater.

Please be advised that the information in your reply does not justify or excuse your actions on the repeater. Concerns such as those are more appropriately the jurisdiction of local authorities. Future incidents such as those described above will lead to enforcement action against your license.

And I can understand why you refuse to acknowledge that which I figured out after some time as a VE. The people who study the question pools with only the intent of getting the license - and there are numerous of these people - don't memorize the questions and answers since that would be a very difficult and uninformed, and unnecessary, way to do it. They read the questions and the single correct answer until they can pick out the two as pairs on the test. There is absolutely no need to know what the content means, nor any need to memorize. It's called association. It works and it is used. Ignore and refuse to believe it as you prefer.

I do know that the setting in which one gets started means everything to the amount of learning the newcomer gets. If he attends a class where the intent is to teach, as opposed to a cram course where the tricks and memory associations are taught "the test is taught", then he comes away with a wholly different base of knowledge, which is to say he has one. Those who study the pools with the sole intent of getting the license wind up with little learned. So Elmering is crucial, and unfortunatly much more rare than once was the case. And one intent only on getting the license has little use for an Elmer anyway.

That's exactly how I passed my Novice and Conditional exams back before
you ever thought about getting a ham license. So what's your point?
It has always been possible to memorize the word associations. You act
as if you have discovered something new when the only problem is that
you wake up in a new world every morning.

The point is, we hav not had easy licensing for all that long a time,
of course, basically only for a year now. And that single example is
only one of the many possibilities .
Yeah, I know- look at the record and you don't see all that much
negative result of ham radio licensing haveing been easy at the
introductory level. There was a good reason for the Novice tohave been
limited to 75 then later 200 watts however. I can't imagine how it can
be justified to turn unknowledgable people loose with highpowered radio
gear when you can't legally drive around the block without your seatbelt
on.

This newsgroup bears very little resemblence to real live amateur radio
as practiced on the air, as we have all learned long ago. Or so I
thought.
If I ever encountered the sort of treatment on the air that I have here
there would be little attraction to ham radio. Here there is a wide
variety of
attitudes, many of which are flagrantly hateful toward the hobby as it
has long existed, and who clearly wish it no good, even lots of evil.
You seem insistant on holding me and other code supporters to one
standard while consistantly ignoring all the carap from the other side.
Why is that? Just to maintain some sort of "come on in folks, the hobby
is fine" regardless of their intent or what they bring?
I know from long experience that ham radio is not for everyone who is
mildly interested and there are many of them that ham radio is better
off without. We already have too many we'd be better off without. It
cannot be a pure numbers game without destroying it at it's source. That
is fact as I see it from a perspective of 45 yearsparticipation.

Hey, I was trying to get you to wake up! Headsoaking will do it every
time.

Uh, Ed I thought by now you'd know. This NG is *about* ham radio. It is
NOT ham radio.

Dwight Stewart :

> I don't think the Captain of that submarine should have received any
> form of punishment at all.

I'm sure the opinion of a Division Communications Services Officer of the USCG Auxiliary in South Carolina is valuable in determining punishment for this collision and subsequent loss of a ship and 9 lives.

US Navy Admiral Tom Fargo, Commander in Chief of the Pacific Fleet also has some opinions on the matter, and the contrast from your expert opinion is striking.

"a serious departure from the high standards expected of officers in command."

"This tragic accident could and should have been avoided by simply following Navy standards."

"Waddle fostered an artificial sense of urgency in preparation for the drill, ensuring the failure of the ship's watch team to work together and pass information about the surface contact."

"Managing these contacts was well within the capability of any ship,"

Stay away from Morse cat release version. It will only do
Fansworth at 13 WPM. The beta version is very good.

Check out http://www.teklasoft.com/java/applets/morse/morse.htm

It has a very good java program that can be configured for
Koch method.

Good luck.

> been a more moral person?

No.

Would you be a less moral person if you had not learned Morse code?

Did Pope Paul learn and practice CW? If not, how did he get to be so moral and upright?

Does George W. Bush know and practice CW? If not, will he ultimately also get a clandestine blow job in the oval office?

Source record: 8302

In that case, Dick, the driver was wrong to have shut the door on the officer's arm. He DID commit an assault, he DID resist arrest, etc. The SC trooper was, however, WAY out of line. I have forgotten the reason the lady was stopped, but I seem to remember the reason for his misplaced anger was that she didn't stop quickly enough to suit him. This does point out that officers *sometimes* get TOO wrapped up in their authority, and that was the point I was trying to make about officers' reactions to being told that you have a license and/or trying to explain the Federal law as it applies to you. It *could* happen that he might react by seizing your equipment, etc, and saying, "You can tell it to the judge".

I believe part of this authority thing comes from the way they are trained, i.e., like car salesmen, they are told to get control of the situation, do not allow the subject to undermine or question your authority, make certain subjects know *you* are in charge no matter what. Officers are under a great deal of stress, and constantly going into situations full of "unknowns", and it takes a toll. For example, I've seen films of cops who overly manhandled a subject right after a high speed chase because the adrenalin is pumping SO hard they just can't come down to *normal* that quickly, and because the subject ran, didn't stop for their lights, he defied their authority (how DARE him), and the adrenalin heightened their sense of anger. In a more calm situation, the same cop might not even raise his voice.

Then there are the RAMBO cops who strap on a gun and a badge, and the concept of public servant goes out the window. They feel like kings who rule over their subjects (Y'all gonna do whut AH say, boy), and they trip out on the idea that they are Gods to be obeyed regardless. Legends in their own minds, etc. That's the cop I don't want coming to my house and telling ME about radio laws.

But Jerry, you have missed the point entirely. Lesbians and the Girl
Scouts may not be the problem. The greatest threat to the Girl Scouts
is the perverted *HETEROSEXUAL* male. What do you propose to do about
them? Molestation of little girls by heterosexual males is twice as
big a problem as molestation of little boys by homosexual males.

Hello,

Many of you are tired of the Steve-vs-Lennie rounds, as well you should probably be. But if you have wondered what drives me to keep on his poisoned heel, the answer can be found in his own words:

From: Avery Fine (averyfine@aol.com)

>>Amateur radio is supposed to be FUN. A hobby. An activity not
>>for profit in itself, carried out for enjoyment and entertainment of
>>the participant. According to many in here it has evolved to
>>something rather different.

No, it hasn't (evolved to something different than what the FCC charters it to be), and no, no one has stated that it has...but let him continue....

>>Some seem to use amateur radio as a KKK surrogate, donning
>>virtual white sheets (license class, rigid rule and tradition system)
>>and attempting to lynch all critics (denunciation, denigration of
>>those not accepting their belief system).

This is Leonard H. Anderson's opinion of Amatuer Radio and Amateur Radio operators. WE (yes, a majority... from what I have seen here) do NOT agree with him, ergo we MUST be members of some terroristic organization.

I know most of you take a "just ignore him" attitude, the problem is he WON'T go away. If he can't hang on to the tail of one of "us", he'll wait for the next unsuspecting person to come along and utter the right keywords and he will be off and running again.

I have no doubt that was exactly what he did with me. For a couple of weeks he was almost pleasant to talk to, but after I made it clear that I value Morse Code as an integral part of Amatuer Radio, I was a "Nazi", "thug", and "brown shirt".

I am none of those. I do not mind saying that if I lived any closer to His Putziness when those insinuations were first voiced, accusations like that would have earned him a rather nasty shiner and probably a deviated septum. Those are cold, callous and evil things to analogize ANYONE with unless there is some pretty good evidence to prove otherwise.

Luckily, a cooler mind prevails. The opportunity WAS mine, but it was allowed to pass without manifestation. Lucky Lennie, and lucky me (for avoiding the probable fine and brig time)

Such vileness is spoken with the sole intent of generating hatred and argument, and that's exactly what he got. One AMP (Andersonian Message Point) for Lennie.

If anyone in a professional enviroment acted or espoused the degree of singular hatred and bigotry that he has demonstrated against US (yes, again a majority) he would be facing civil rights violations cases from now until his demise.

Lennie, take a hint. YOU NEED HELP. The sheer volume of hatred you pour into this forum is evidence of your sole preocupation WITH your hatred and single minded mission to defile Amateurs everywhere.

Your frequent and LIBERAL use of analogy to the KKK and Nazi's only underscores your problem. Do you not see this? Are you REALLY oblivious to the foolheartiness of this "quest" of yours? It has long since passed from being a "desire" to see some regulatory change to allow you to avoid taking a test YOU deem "humilating" to your superior intellect.

(1) No one here (except you) believes that ANYONE in Amateur Radio WANTS Amateur Radio to be as it was in the 30's, 40's, ad nauseum. Do many lament a change in the mindset and VALUES of many? Of course. It's a generational phenomena that EVERY generation goes through. Does anyone want to go back to crystal control and regen receivers of that era, though? I thik not!

(2) No one here (that I am aware of) is affiliated with the American Nazi Party, any of it's spin-offs or other self-proclaimed leftist organizations of that ilk. Likewise no one here is affiliated with the KKK or any other organization dedicated to the repression of ANYONE'S rights.

To assert to the contrary would be to again lie in a public forum unless you have some "evidence" of that memebership.

(3) The Amateur Radio SERVICE has gone through CONSTANT metamorphosis since it's inception, and there is NO hint of stopping now. Any suggestion of "stagnation" or failure to advance is foolish and NOT true.

(4) The Amateur Radio service DOES provide NECESSARY and VALUED >EMERGENCY< and OTHER important public service related communications, your attempts to assert that Amateur Radio is not a "public safety" service notwithstanding. It happens on a nearly daily basis. It's a FACT. Deal with it.

(5) Amateur Radio IS a radio SERVICE, and the people of the United States, as expressed via representation in the Congress of the United States, expect that if WE are going to occupy valuable electromagnetic spectrum, we WILL "pay" our way. As the recent assaults by Little LEO and other spectrum users have proven, "our" allocations are NOT above reconsideration for commercial applications.

By the way, at my current position I am aware of at least TWO projects being considered that will require the client to go to the FCC and seek permission to implement the project as it will DIRECTLY impact both the Amateur and broadcasting services. And we are only one small company. I do not believe that this is the only type project being considered that will impact us. Occupancy and USE of these bands is of vital importance. "Service" helps to meet that need.

Facts dispell almost all of Lennie's rants, yet he perseveres in his attempt to denigrate and defile Amatuer Radio, and he continues to feel that he and ONLY he is in any position to reasonably determine what it is we need "for (our) own good".

He knows nothing of the kind. He has NO insight as to the needs or future of Amateur Radio and as has laready been proven in just the last two years, there ahs been almost NO significant impact on Amateur Radio census due to Morse Code issues.

People who want to get an Amatuer license will do so, code or no code. And they DON'T need your insults, hatred or lying to make them do something YOU won't do yourself.

Join the Klan or Nazi party if YOU want to, Lennie, but STOP these assinine assertions of similarity between them and anyone who doesn't have the "clarity" to see your opinion as the guiding light, Lennie. You are neither enlightened, nor can you see the light of day, and YOUR day has passed. Back in 1953, I believe.

This is the first public release of the Ham quiz software. I think
this is the best amateur radio testing program going because it
doesn't randomly give you questions. It remembers which questions you
have problems with and those are the ones that are given most often.
The end result is if you can pass this test after taken a dozen times
or more, then you won't have any problem passing the real test.

License info:

This source is licensed under GNU Public Licenses and does come
with source.

Let me know if have any problems.

I would also like to know what your test score was on both the
program and on the real test.

thanks & 73

Sheesh! Talk about having to explain the "joke"!

It's not code usage. No one is denying anyone the privelege of using morse to communicate. It's code *testing* that has everyone in an uproar in this newsgroup. Anything past what is required the treaty is nothing but a worthless hazing ritual for Ye Olde Farhtz who think that testees are learning a "valuable communications skill"

>> "safety"?
>
>Yep, in my opinion it does.

Well, there you go.

>Other opinions may vary. But, to the best of
>my knowledge, it's not on the exams now so may be considered trivial.

Nonsense. The mere fact that something is or is not on the exams does not prove
a thing. The exams are not perfect.

And the discussion is about what should be on the exams. We agree that safety
is one subject that should be on the exams, and that proper handling of high
voltage is a safety subject.

>One wonders what the Q&A would be like. "One should not grab 2500 volts
>DC because: A. ..., B. ..., C. ..., D. ..."

How about:

"Which of the following methods should be used to safely determine if an
electrical circuit is energized?"

"At what voltage level do energized circuits represent a serious threat to
human life?"

"Can a radio or electronic device that has been turned off still be a shock
hazard?"

"Can a radio or electronic device that has been turned off and disconnected
from all sources of electric current still be a shock hazard?"

There are lots more. I would not be surprised to find that many of these are
already in the question pools.

And high voltage is not the only issue. While a 2400 volt 1 amp supply for a
tube legal-limit amplifier poses one sort of threat, a 24 volt 100 amp supply
for a solid-state legal-limit amplifier poses another, different threat.

The situation is not at all like "grabbing the fan belt of a running engine".
In that case, the engine, pulleys and belt can be seen to be moving, they make
noise, and the vibration can be felt without putting oneself in danger. Most
energized electrical circuits don't do any of that - hence the danger.

Switch to Safety!

>>time. In 1953.
>
> Geez-O-Mighty...Here we go with the "back when I was a
>whipper-snapper..." rant again.

1953 was 48 years ago and the place was a 36-transmitter site
for US Army radio station ADA in Tokyo, part of the long-haul
HF trans-Pacific military network. ADA didn't use OOK CW
48 years ago. The time element was to create a point that the
big users of HF gave up on CW a long time ago.

>>"Discomfort" is caused by trying to keep the past the same even

>with you that "they" are trying to maintain some archaic standards.

The long-time PCTAs are trying to keep the past as it was.
That is evident by their postings in this newsgroup, by their
writings, not mine.

> You are, of course, wrong, but you keep repeating it. And in order to
>offset the "Lie Oft Repeated" syndrome, it must be continually rebuked.

Nursie has not rebuked anything by stating lies of her own.

> It must be VERY uncomfortable for YOU, Lennie, trying to perpetuate your
>jihad against "old tymee" Amateur Radio afficiondos as "trying to hold onto
>the past" when every indication in every forum is that you are wrong.

Nursie has simply stated a pejorative group. Nursie claims "lie"
when there are no lies, yet lies herself.

A "jihad" is approximate Arabic for a religious war, something
engaged in to promote certain religious beliefs. Removal of an
unneccessary test element for a federally-required license to
engage in a radio hobby does not involve religion.

There are some who are steadfast in their "beliefs" of "serving
their service" in certain ways and only those certain ways or
be called "unbelievers." They call removal of certain ways as
a "jihad." They are the fedayin. The rest of us are simply
advocating a government regulation change.

Some fedayin will never yield until the last "infidel" is gone. :-)

>state of the art."

Incorrect. I have not used such a phrase. PCTAs have used
that phrase, incorrectly attributing it to NCTAs.

>>>The claim
>>>had always been that the code test requirement was discouraging
>>>brilliant, computer-literate young people who would magically transform
>>>the landscape of amateur radio communications technology if only they
>>>had the fetters of this time-honored mode removed from them.
>
>>Incorrect and an attribution of the PCTAs, not the NCTAs. False.
>
> Leonard H. Anderson is once again LYING. YOU YOURSELF have made these
very assertions. These were some of the very first exchanges we had, Lennie.

Incorrect on all accounts.

> You are such a lying idiot that you can't even keep your OWN lies
>straight.

Nursie resorts to pejoratives to attempt proving a point. No point
of nursie's has been proven other than an ability to write nasty.

>>Factually and logically incorrect. NCI is advocating only the
>>elimination of the morse code TEST.
>
> Only correct as applied to NCI. The rest is completely and unalterably
>correct when applied to YOU, in as much as you are dead center in the "NCTA"
>camp and have USED such phraseology in many of the thouands of posts you >ahve
polluted this NG with.

I am not a member of No Code International. I agree with their
views. My viewpoint on code testing for an amateur radio
license remains as it was long before No Code International
was organized.

> To assert otherwisewould only be ONE MORE nail in the
>"Lennie's Lies" coffin.

Repetition of "lie" charges does not prove anything. Nursie
has no factual basis for that statement other than imagination..

>>This is not Fidonet. This is not a BBS net of any kind.
>
> He did not mention ANY "BBS", and his comments vis-a-vis
>"Fidonet/Usenet" were correct. How would you claim otherwise?

Fidonet began as a network of Bulletin Board Systems (BBS),
well before Internet became public-access carrying Usenet
newsgroups with it.

>>>The link between technical incompetence and Morse code skill is the
>>>very foundation of every argument that has ever been made against the
>>>pre-Restructuring status quo in code testing.
>
>>Incorrect.
>
> NOT "incorrect". YOU YOURSELF have claimed that a great number of
>persons, yourself included, persumably, have not become licensed because of
>thier intolerance to the concept of learning the Morse Code.

Incorrect again. I have claimed, publicly, that a morse code test should
not be a requirement for an amateur radio license test. That is not a
presumption. There is no "because of thier [sic] intolerance to the
concept of learning the Morse Code."

My advocacy of elimination of the morse code test is not based on
any "concept of learning" but rather as an unneccessary regulatory
requirment for the amateur radio license test.

> This is an archived fact.

No such "archived fact" exists. It is impossible to prove a negative.

> Perhaps not a practical statement, but no more "delusion(al) than
>anything YOU have posted!

Pejorative comment having no relevance.

>
>>Morse code in its present form of aperiodic on-off signals

>>characters is approximately 157 years old. Given the highly
>>untechnical nature of that, it is unlikely to see any "growth"
>>in technology as applied to radio.
>

> And dropping a line with a hook and some form of bait into water in
>order to coax a fish onto that hook is centuries old, but it still works.

Irrelevant. There is no direct or causal relationship between
fishing and morse code.

>>There is no longer any valid reason to keep a code test for amateur radio
>>licensing.
>
> The law, Lennie. The ITU says it's the law.

No. The International Telecommunications Union is a UN body
wherein member nations agree to abide by decisions reached
by that body. The ITU cannot make laws.

>The Congress of the United
>States has ratified the treaty, thereby MAKING it the law of the United
>States.

Popular misconception. The Congress of the United States can
and does make laws for the states and territories of the USA but
any ITU standard by itself is not a law.

> The FCC has said, officially, that it will "revisit" the code testing issue
>when they are no longer bound by the treaty.

The FCC has stated only that the code test is not relevant to
their regulation of US amateur radio. In 1990 in the 90-43 R&O
establishing the Technician Class license, again in 1999 in the
99-412 R&O for "restructuring."

Test element 1 is still required for any General or Extra class
amateur radio license examination.

>FCC officials, including Riley,
>have said in publically made comments that they have every expectation that
>Morse Code testing will be dropped shortly after the treaty is ammended and
>ratified.

There is no separate treaty regarding morse code testing. There
is only S25.5 under the general heading of S25 setting ITU-R
standards for amateur radio.

Unless there is something added in the WRC agendas or in Study
Groups of the ITU or in the FCC International Bureau agendas since
last week, there is nothing to be found concerning any future action
regarding ITU-R S25.5.

> That, however, has not prevented or detered YOU from continuing to
>charge full-bore at windmills, now has it?

Test element 1 is still part of the license examination for a General
or Extra class US amateur radio license.

Judging solely by appearances, it would seem that the members of the Board of No Code Interenational have already met those qualifications by test. See any database of call sign v. class.

If the code test were dropped tomorrow there would be no loss of privileges of those already licensed.

The SPICE program family will not design an amplifier for you, with
or without extra-cost Libraries. That is true whether the "amp"
[amplifier] is vacuum tube or semiconductor based. The SPICE
programs analyze an existing circuit in time and frequency
domains.

The ARRL no longer sells the ARRL Radio Designer program set.
It is built on the free-source-code SPICE core.

P-Spice is used for computer aided design TESTING. And I don't need you to lecture to me about tube amp design. You can find a couple of my production designs in the Tube Amp Manual by Aspen Pitman - or so I've been told.

>>state of the art."

>Incorrect. I have not used such a phrase. PCTAs have used
>that phrase, incorrectly attributing it to NCTAs.

NOT "incorrect". From the very keyboard of "NoCwTest". You argued
extensively that you and your colleagues were "put off" by the code issue.

YOU insisted that the dropping of the code test was necessary to encourage
these folks to enter the Amateur Radio service.

>> Leonard H. Anderson is once again LYING. YOU YOURSELF have made these
>>very assertions. These were some of the very first exchanges we had, Lennie.

>Incorrect on all accounts.

NOT incorrect. Truth. I know you have lied to us so many times, Lennie,
that you can no longer remember what you DID write.

Better get Googling, because you need to read up on what YOU wrote.

>Nursie resorts to pejoratives to attempt proving a point.

No, Lennie, I don't have to result to "pejoratives" to prove anything. You
do it nicely for me.

You really DO need to sit down and go back and read what YOU have wrote

>I am not a member of No Code International.

I didn't say you were.

>Repetition of "lie" charges does not prove anything.

I do not seek to "prove" anything, nor do I need to. A trip through the
archives will validate anything I ahve had to say.

>>NOT "incorrect". YOU YOURSELF have claimed that a great number of
>>persons, yourself included, persumably, have not become licensed because of
>>thier intolerance to the concept of learning the Morse Code.

>Incorrect again. I have claimed, publicly, that a morse code test should
>not be a requirement for an amateur radio license test. That is not a
>presumption. There is no "because of thier [sic] intolerance to the
>concept of learning the Morse Code."

Again...anyone with the determination to determine who is not being
factual here will find out, Lennie.

And you HAVE made such statements.

>My advocacy of elimination of the morse code test is not based on
>any "concept of learning" but rather as an unneccessary regulatory
>requirment for the amateur radio license test.

No, your "advocacy" is based on hatred and rhetoric.

>Pejorative comment having no relevance.

Which would eliminate about 95% of your posts, Lennie.

>Irrelevant. There is no direct or causal relationship between
>fishing and morse code.

Archived Note: It's OK for Lennie to use analogies but not me.

>>The law, Lennie. The ITU says it's the law.

>No. The International Telecommunications Union is a UN body
>wherein member nations agree to abide by decisions reached
>by that body. The ITU cannot make laws.

And the ITU is the organ by which said treaty was enabled.

>>The Congress of the United
>>States has ratified the treaty, thereby MAKING it the law of the United
>>States.

>Popular misconception. The Congress of the United States can
>and does make laws for the states and territories of the USA but
>any ITU standard by itself is not a law.

Again...the treaty was ratified by the Congress of the United States. You
may argue it all you want, Lennie. S25 and all it's paragraphs are US law.

>Test element 1 is still required for any General or Extra class
>amateur radio license examination.

As required by international treaty. You really are delving deeper into
Putziness, Lennie.

>>FCC officials, including Riley,
>>have said in publically made comments that they have every expectation that
>>Morse Code testing will be dropped shortly after the treaty is ammended and
>>ratified.

>There is no separate treaty regarding morse code testing. There
>is only S25.5 under the general heading of S25 setting ITU-R

>standards for amateur radio.

Of which the US is signatory. What part of IT'S THE LAW do you not understand, your Geezerness?

>Test element 1 is still part of the license examination for a General
>or Extra class US amateur radio license.

Previous facts reiterated. Lennie's anti-windmill crusade duly noted.

I think you have been around log enough to remember this one. I believe
it was a SS weekend quite some years ago when the FCC decided it was a
good opportunity for some enforcement action against the "California
kilowatt" operators. One instance was reported in QST where the guy was
cited not just for illegal power but unsafe engineering practices.
Why? His amplifier was on the other side of his shack wall (presumably
to cut down on blower noise) in his garage. Garage door open,
unshielded high voltage and kids playing in the driveway. No, noone was
hurt but how close was it?

Analysis.

There exist CAE that do synthesis, exact part values for certain
configurations such as filters.

>And I don't need you
>to lecture to me about tube amp design.

Wasn't "lecturing" on production versions of tube amplifiers
for musical instrument applications. Not my field. Having
written some CAE for both analysis and synthesis and
having used ECAP, LECAP, and several SPICE family
versions, I have some familiarity with CAE.

>You can find a couple of my
>production designs in the Tube Amp Manual by Aspen Pitman - or so I've

"Tube Amp Manual" by Aspen Pitman, 1993, 4th Edition, is
available from Old Colony Sound for $29.95. 768 pages,
softbound. Looked it up in the paper catalog from Old Colony.

Good for you. :-)

>"valuable communications skill"

I think I see what you are saying, but factually CW is still the most
efficient form of exchanging information available to amateurs when
conditions are marginal.

I certainly have no objection to people who never use CW not taking a
fast CW test, but it is stupid to allow 5 WPM people access to
high-speed CW segments. It actually causes problems.

No matter how we look at it, CW isn't the problem. It isn't a barrier,
and hasn't been for a long time except to a very few lazy people. The
problem is people aren't interested in radio.

The recent results of lowering speed to 5 WPM (along with the much
more simple test we have had for the past ten years or whatever)
clearly show very few (if any) people are attracted by the reduction
in speed.

So it is really a useless issue....it's mostly people who want to get
a "free upgrade" that are doing all the bitching. 1% increase in new
amateurs and 30% increase in upgrades shows we are whipping a dead
horse.

It's a social problem. People are lazy and want the best of everything
for no effort or work. They won't fish for a living anyway, it's too
much effort when we have welfare.

actually, it's not just opposition to CW but to any "legacy" modes (meaning any
modes currently in use, I suppose). VHF/UHF voice FM is such a "legacy" mode.

There are also the put-downs of any sort of competitive/sporting radio
operating activity (contests, dxing, award-chasing, mountaintopping, etc).
"Electronic paintball wars" was one catchphrase.

> and of course those are "his" opinions
>and then wonders of wonders, the exact same "opinion" almost verbatim

Boy, I sure could go for a Pan-Galactic Gargle-Blaster right now. Just had to
defend myself against the Ravenous Bugblatter Beast of Traal.

(The Ravenous Bugblatter Beast of Traal is perhaps the most voracious life form
in the universe, and will attack and eat almost anything. The one effective
defense against it is based on the fact that it is very stupid. The Ravenous
Bugblatter Beast of Traal is so mind-numbingly stupid that if you cover your
eyes (with, say, a towel) when it is attacking you, it will simply go away,
because it thinks if you can't see it, then it can't see you.)

Can you provide any single example of anything as bad as your example that has happened to hams who have been licensed or upgraded in the past year?

>Yeah, I know- look at the record and you don't see all that much
>negative result of ham radio licensing haveing been easy at the
>introductory level.

I guess not.

I can go to the archives in QST and find a few examples of hams tested prior to one year ago who have suffered harm as serious as your example, though, Dick. These examples range from tower accidents to electrocution.

Okay, we've covered all that (the skills necessary to gather information and evidence).

> How can an officer enforce the radio law,
> i.e. determine if a transmitting station is
> in violation of that ordinance, without
> making technical measurements and evaluating
> the results of those measurements?

We've covered this before (however, I do remember you think it is impossible). Anyway, what about a simple list of the most common illegal CB radio devices on the market? Cops use a "hot sheet" all the time to determine if a car may be stolen. That "hot sheet" gives them the authority to stop a suspected car, arrest the driver, and seize the car. If a "hot sheet" of stolen cars is legal (routinely stands up in court), why not a "hot sheet" of the most common illegal CB radio equipment? It certainly should not take a knowledgeable FCC employee more than a few hours to make up a list every few months that would cover about 95 percent of the illegal CB radio devices commonly used.

> And to open another can of worms which has
> barely been touched on, how will that officer
> conclusively determine thzt the suspect is in
> fact the person making the suspected
> transmissions? [snip]

I don't know, Phil. I suspect he won't have to "conclusively" determine where a signal is coming from. In most cases, it will be a simple matter of deduction - a neighbor complains, says the signal is coming from that house, the officer does see an antenna at that location, the officer knocks on the door, and asks to inspect the station.

> As I said earlier, if the officer is going

> will jump on that first thing.

Why are you so certain an attorney will even be involved? I suspect CB enforcement at the local level will be treated as a misdemeanor, with nothing more than a minor fine involved. And, like most other misdemeanor offenses (traffic offenses, minor citations, etc), few will ever make it to a courtroom. The FCC will probably continue to handle the more serious offenses (or complicates cases involving technical evaluation).

Cecil:
What ARE you having such a probem with here? You don't routinely permit
males to be in charge of little girls and their activities, and
screening those who are is mandatory.
What is it that so complex about all this? If you do whatever you can
to protect kids of whatever sex by protecting them from predators to the
maximjum extent possible, the liklihood of a problem decreases.

You wouldn't have made it as a rocket scientist.

> you are transporting drugs, you'll feel
> that shooting you is okay too?

Whoa, calm down, Dennis. I didn't say a "thought" justifies a thing, nor am I really trying to justify anything. I simply stated the facts as I heard them. By the way, a "thought" didn't justify it for the people who shot down the plane either - the justification was a plane flying a common drug route, a plane approaching a border, a flight plan that didn't show up, and the failure of a pilot to respond to several radio challenges.

> Uh, CNN has a copy of the flight plan on
> their web site, obtained from the flight
> service company in Iquitos it was filed
> with. [snip] If CNN could find this,
> don't you think that the people who were

Well, gee, could it be that CNN was not actively involved in a chase of a suspected aircraft when they did their search?

> I don't know about those reports you put
> so much faith in, either. The original
> report said the plane had been in both

> Iquitos in Peru, to the Rio Yavari, which
> is the border between Brazil and Peru, at
> Islandia, Peru. The purpose of the trip
> was to visit [snip]

What value is any of this to the discussion? According to reports, none of that information was available at the time of the incident, so it really doesn't matter. Again, according to the reports, no flight plan was found for the aircraft when it was requested. In addition, the plane was flying on a route commonly used to transport drugs, the pilot did not respond to radio challenges, and the plane was

approaching a border. That is the only information that matters at this point, and it is that information that has to be verified before we will know the full truth.

> Of course we will have to consider the
> possibility that you are the drug dealer
> they were smuggling for too, since while
> the reports we've had didn't mention
> anyone who thought that either the
> missionaries or you were smuggling drugs,
> that is a negative which is still hard
> to preclude with certainty.

Boy, you really are taking this personally, aren't you? Again, I never said the plane was carrying drugs, only that this was one possibility that has to be considered until all the evidence is in. Until we know all the evidence, I'm not going to jump to any conclusion and start blaming anyone - the people on the plane, the people who shot them down, or anyone else. And, likewise, I'm not going to dismiss any reasonable possibility until a full investigation reveals all the facts.

> [snip] The drug laws are a cure that seem
> to be worse than the problem being cured.
> They don't help people who use drugs to stay
> out of harm's way, and they put people who
> don't use drugs in harm's way. Like the
> people in Peru.

Ah, now I see why you're so determined to jump to conclusions with this situation - its an opportunity to further your agenda to legalize drugs. Well, never mind then - you're too busy pointing a finger at the drug laws to wait for all the evidence to come in.

No conclusive determination of the origin of the signal, no case.
Anything less is sloppy evidence-gathering and guesswork, which is
a p-poor basis for any legal case.

>In most cases, it will be a
>simple matter of deduction - a neighbor complains, says the signal is

Wide open to the "dude defense" -- "its not me, officer, it's some
dude elsewhere". No conclusive evidence that the alleged unlawful
nonconforming signals are coming from that station, no case. Period.

Dwight - analysis of enforcement cases for sufficiency before they
are brought is MY bag - I was the Commission's expert on such things
for years and taught it at the Academy and in OJT. It's sloppy
prosecutorial technique to issue a forfeiture or take a case into
court where the prosecution cannot conclusively prove every element
of the violation and overcome any foreseeable defense. That goes
for everything from spitting on the sidewalk to premediatated murder.

Any operator who does not get legal advice and "go the distance" in a situation such as this is a fool. I would love to take on some of these cases if and when they arise.

>The FCC will probably continue to
>handle the more serious offenses (or complicates cases involving

Tell me the scenario of someone operating overpower and/or out-of-band that would not involve technical evaluation to conclusively prove the violation.

A charge of "using non-type-accepted equipment" is the icing on the cake, not the cake itself. No probative evidence that the station is operating "out of tolerance", no reasonable cause to make the inspection to determine if the equipment is type-accepted or not.

Looks like that to me. A big Q mark popped up when I first learned that it was a demo for a busload of civilian VIP's when it all went wrong. Talk about distractions, should never happen. But the late word is that they do not intend to discontinue these VIP demos. The commander in chief himself should nix this stuff.

In article <3ae8cece.831229@news2.dvol.com>, Brian Kelly, w3rv says...

> If he had been court-martialed and found innocent he would have been
>reinstated as the CO of the boat involved or some other boat or put in
>command of a desk somewhere and would be continuing his career with an
>unblemished record.

Hardly! Even if acquitted (no one is "found innocent") he would
still have been "the guy who sunk that JA fishing boat". I spent
most of my adult life in the community, and that guys career was
ended either way. The legal beagles can blow smoke as they wish,
but he never would have seen another promotion nor another command.
The competition for four rings on your sleeve, and for any command
(let alone a seagoing command) if far too intense to allow him
any hope for either.

By the way, there was no "honorable option" for Waddle to take.
The decision regarding NJP vs. Court Martial is not made by the
alleged offender, but his superior (in this case CINCPACFLT).

Hans, the opinions expressed are solely my own (based on information heard through public news sources). They do not represent the views of the U.S. Coast Guard or Auxiliary, nor do they represent a statement of my position as a member or representative of either organization. This is further underlined by the fact that I did not attempt to identify any association with either organization when I made those statements.

Furthermore, I'm not a member of the Auxiliary in South Carolina. I'm a member in District 13 (Washington, Oregon, Idaho, Wyoming, and Montana). My Division is located on the Olympic Peninsula of Washington State, with activities extending throughout Puget Sound, the Strait of Juan de Fuca, and the coastal waters of the Pacific Ocean. I'm simply in South Carolina for an extended visit to deal with personal family matters.

> US Navy Admiral Tom Fargo, Commander in

> from your expert opinion is striking.

Oh, I'm sure Admiral Fargo does have a different opinion. If I were in his shoes, I probably would be forced to express a different opinion also. However, when writing as a private individual, I don't have to consider public opinion when offering my views on the matter.

> "Waddle fostered an artificial sense of

> ensuring the failure of the shipï¿½s watch
> team to work together and pass information
> about the surface contact.ï¿½

Since the drill involved what would normally be considered an urgent procedure, it was not unreasonable for it to be done with a sense of urgency. Furthermore, the Captain of a submarine capable of carrying nuclear weapons should be able to expect his crew to conduct their duties effectively regardless of any sense of urgency (real or artificial).

It's not the size of the study guide that matters, it's the information
contained therein and how well the student must learn it in order to pass the
test.
>
>Ed:
>

>questions.

I think most hams make an effort to actually learn the material, not just
memorize the pools. Some just word-associate and memory-trick their way
through, of course, but that's nothing new at all.

I had an experience recently where a prospective Extra on another NG could not
understand the Thevenin equivalent problem, even after reading the explanation
in several study guides. He knew he could just memorize the answers to the 10
questions in the pool, but he did NOT want to do that - he wanted to learn! So
I gave him an explanation, and after a few go-rounds he got the idea. I learned
a lot, too, because it's one thing to know how to solve a certain type of
problem and quite another to teach someone else how to do it.

> I learned most of my electronics by building homebrew projects
>out of magazines (stuff like 6-transistor AM Broadcast radios, light dimmers,

>-
>are you out there?
>
>Anyway, I digress...

I learned my fundamentals by designing and building ham rigs from "recycled" parts back in the mid-60s. My "study guides" ran to several hundred pages - they were the Handbook, Understanding Amateur Radio, and other books.
>
>You're right, the study guides are bigger today than they were in the
>Jurassic
>era when you were first licensed. However, I am willing to bet that the
>average
>New Ham of today knows a lot less about the technical aspects of the hobby
>than you and your contemporaries did.

The range of technical knowledge back then was wide. Some hams were very knowledgeable while others were clueless. Like the guy who brought home a new XXX receiver, hooked it up and learned to use it (sort of), then plugged a mike into the PHONES jack, flipped the SEND-RECEIVE switch to SEND and started calling other hams. He complained to the manufacturer that the set was no good because he did not work anyone.

Then as now, some built from scratch while others bought their stuff. And everything in between. And the guy who was an expert in one area might be a rank beginner in another area.

>Back then, your "Elmers" patiently
>showed you how to neutralize the finals in your transmitter, or sat with you
>when you checked into your first CW net.

NOT! I, for one, did not have that sort of help. My Elmers were books, but I had to read the books and figure out how the stuff in them applied to what I was doing. Of course the books were really good, so in effect I had Elmers with names like Grammer, DeMaw, McCoy, and Goodman.

By the way, the term "Elmer" did not exist until the '70s. It's one of the few ham radio terms whose exact source and origin can be pinpointed. THERE'S a question for the pools!

>Today, "Elmers" are called on to
>read instruction manuals for brand new HT's so they can help their "students"
>figure out how to set the repeater offset and PL tones!

Some things never change. The Old Man wrote of Final Authority, Young Squirt, Radical, and other characters whose counterparts are still around today.

What matters, though, is HOW the Elmer helps out.

--

Today we have more opportunities to Elmer than ever before. And there are more resources than ever before, 'specially with newsgroups, reflectors, and websites. Heck, there are over 500 (that's FIVE HUNDRED) technical articles online at the ARRL website alone! Many times all a new ham needs is a pointer to where the info is located.

...And this introduces another problem if the "most used" illegal CB radio devices list includes those devices which are perfectly legal in another radio service..... (e.g. Uniden HR 2510 - a local favorite in my area, which when unmodified, is a perfectly legal 10m amateur radio transceiver). With that, we return to the most common point of opposition to this law when it was still just a bill: Using the law as an excuse to harass other radio services.....

Perhaps you think the consequences of overheated radiators are universally harmless, but I disagree. A hot radiator hose can burst, causing permanent blindness if one happens to have a head inside the vehicle. Jumping a battery incorrectly can have similar consequences.

During WW1, not only were hams shut down from transmitting, but from receiving,
too. Equipment had to be disconnected and sealed to prevent operation.

>IMO, that's
>the way things should be.

"The waves come upon us, whether we bid them or not". I see it as a question of
property rights - if my RF reaches your property, and you can intercept it
without preventing others from doing so, you should be able to listen to it.
What you do with the information contained in it is another matter. .

>If someone doesn't want their
>RF transmissions to be monitored, they should encrypt them.

Agreed!!

The real problem is that many politicians are so technologically ignorant that
they do not understand the most basic concepts. For example, the original
analog cellphone systems are completely unencrypted, yet folks like Newt
Gingrich had embarrassing conversations using them. Then the embarrassed Newt
and other pols pushed through unenforceable laws in an effort to prevent a
recurrence. They treated it like wiretapping, which is of course not the same
thing at all.

Dwight...pay attention carefully...

Even assuming such an all enclusive list can be generated...
JUST HOW DOES THE COP GET TO SEE THE RADIO IN
A PERSON'S HOME. The cop has NO right of access.
You continue to ignore that vital step needed to look at
any radio in a person's home.

>> And to open another can of worms which has
>> barely been touched on, how will that officer
>> conclusively determine thzt the suspect is in
>> fact the person making the suspected

>> team to work together and pass information
>> about the surface contact."
>
>Since the drill involved what would normally be considered an urgent
>procedure, it was not unreasonable for it to be done with a sense of
>urgency.

Peacetime drills, first and foremost, require the strictest attention to safety concerns, especially when the drill is conducted only for benefit of observers, and in waters in sight of land and known to be used by other shipping. The fact that Greenville shortcut safety procedures, and had a breakdown of team communications regarding the surface picture demonstrates that the skipper of Greenville had not properly prepared himself, his ship, nor his crew for this evolution.

>Furthermore, the Captain of a submarine capable of carrying
>nuclear weapons should be able to expect his crew to conduct their
>duties effectively regardless of any sense of urgency (real or artificial).

According to the findings of a Board of Inquiry, neither CDR Waddle nor his crew conducted their duties effectively in this drill. The responsibility for that lies directly on the Captain.

At sea, the power and authority of a Navy Captain is total and absolute. So is his responsibility and accountability for the safety and performance of his ship and crew. I'm surprised the same is not true in the Coast Guard.

By saying "high speed segments" I was alluding to the areas outside the novice and tech bands where 5 WPM testing gains access only to a specific CW segment.

I wanted to say that without referring to the novice or tech holders as "lower skilled CW ops" or as "novices", since that might have other implicatiuons than simply being a lower speed area operating area.

But if you prefer, in plainer language, the lower CW-skill areas (such as 7100-7150 on 40 meters) as a general rule used to contain all of the slow struggling CW work.

Now it has moved into other areas of the bands, and is causing problems. On a nightly basis, I am called by several people who obviously haven't a clue what I am sending, or who I am working. They call me on top of the people I am working, and are really having a struggle. In most cases, not matter how I send "QRL" or ".-...", they are lost! They simply don't understand I am working someone else. Some of them continue for a few transmissions before grasping it isn't them that I am working.

Not that I don't want to work them, or appreciate they are trying to work or learn CW, but having the band sorted out so less skilled CW ops are in one area was a lot better idea than letting people who only barely make 5WPM have access to the entire CW area.

I hope this is clearer, although I prefer to think of it as high-speed and low-speed areas instead of thinking of CW skill levels.

Bill patronizingly responds:

>Are you saying you can only take 97.1(b) seriously
>if you homebrew?

No, I said nothing of the sort. You asked for reasons why someone might build their own radio. I gave you a list of possible reasons, never suggesting that they were the *only* reasons for anything. As any reasonable person (does that include you?) knows, 97.1(b) can include many activities besides homebrewing.

>conditions are marginal.

Maybe 10 or 20 years ago, but not today. For better or worse amateur
radio is no longer the primary or secondary backup to normal means.
For example high speed (200 kbits or faster) internet connection
can be set up anywhere in North America in a few hours for less than
$1000.00. Sat phones work anywhere in the world and will give point
to point connections and they cost less than learning CW.

If you or anyone else thinks that at some point there will be a need
for CW, you should think again. You are just wasting your time and
skills. On the other hand if you enjoy CW and get a kick out making
CW contacts then go for it. That is great. Just don't try to ram
it down everyone else throat. They may not wish to spend their time
learning CW, except for fun it has a very poor return on investment.
If they don't enjoy it, it is a waste of time.

>I certainly have no objection to people who never use CW not taking a
>fast CW test, but it is stupid to allow 5 WPM people access to
>high-speed CW segments. It actually causes problems.

It would seem like it is time for a new CW band plan. Since class
of license no longer split the CW subband why not adopt a CW band
plan to the different speeds of CW and for data.

>No matter how we look at it, CW isn't the problem. It isn't a barrier,
>and hasn't been for a long time except to a very few lazy people. The
>problem is people aren't interested in radio.

You know you are not winning any points by name calling. Just because
a person has choosen not to learn high speed CW doesn't make them
lazy. I have known a lot of people who have elected either not
learn the code or learn the just enough to pass the test, who
are anything but lazy.

>So it is really a useless issue....it's mostly people who want to get
>a "free upgrade" that are doing all the bitching. 1% increase in new
>amateurs and 30% increase in upgrades shows we are whipping a dead
>horse.

The only thing the test is for is to make sure you know the rules
and you have a clue how not to kill yourself. It also serves to
reduce the number of low class CBer's types. There isn't any point
in testing skills anymore because there is so much to the hobby.
The amateur license is a license to learn by doing.

The scenario Cecil offered was a HOT radiator (normal for automobile
operation) and not an overheated one, Ed. So that is the scenario I
followed. I am aware of the hazards of an overheated one.

Jumping a battery
> incorrectly can have similar consequences.

You got it. Besides the possibility of fire or explosion, there are all
sorts of gotchas out there.
At work we once had a training program proposed where untrained
personnel were supposed to, on their own with no supervision, open up
powered-up mobile radios and learn about them. Bad idea. The mere act of
touching the wrong teminal with a hand which has a ring on a finger can
cause an instant high-current short circuit that can have serious
consequences, like causing the loss of a finger when the ing becomes a
redhod heating element. I knew a guy in the service who had lost a ring
finger in that way. A wristwatch is similiarly dangerous. And an
unknowledgable individual mucking around inside a solid state radio can
quickly cause terminal damage that he may never know he caused.

Valid and great point. As a community this should be loudly brought to
the attention of those that can make a difference. Remember, the
squeakiest wheel gets the most oil (as long as the wheel can still turn!).

Ah, right! Now the theme is "there are no high sped segments". Is this
a surprise? Don't think so. Next, "why have CW/Data segments" which we
see is already out there.

Jim, I love it when someone cuts through all the whining about "it ain't like it used to be" and reminds us of an obvious fact, like you did above. The fact is we've never had more technical resources available to us as hams, and essentially free for the asking in many cases.

True enough. There is a big phone band for those people to enjoy. They should be happy working phone, and not ask for extra class CW frequencies.

But you are incorrect if t you think CW is not an efficient mode when conditions are poor, power is limited, and you don't have a rack full of other support gear to process signals.

>>I certainly have no objection to people who never use CW not taking a

Gosh, we had one. The FCC turned it over when they listened to Kenwood and W5YI.

OK, lazy or unmotivated.

My point is CW is not a barrier UNLESS the person chooses to NOT learn CW. It is a barrier by choice of the person, not by the fact it is there.

I don't ever plan on doing may things in life, and I still have to learn things I think I don't need. That is MY choice, not a "barrier". If I am too lazy or unmotivated to learn something, it's really my problem. I quit whining about such stuff when I was a teenager, I quit saying "that's unfair" because usually the whining takes more work than the effort.

For example, when I was 16 I whined about having to pass a parallel parking test to be able to get a driver's license. "Unfair", no one parallel parks! Hey, now I think it is a good idea.

>>So it is really a useless issue....it's mostly people who want to get

>The amateur license is a license to learn by doing.

No problem, that's why we need steps!!! We should have logical steps that encourage progress, and keep people from operating outside the limits of their experience or skills.

Why should a person who can't handle CW gain full CW access? Why should a person who can't understand SSB gain full SSB access? Why should a person who can't understand how to operate a station operate HF, where he has a dozen things he can screw up and bother other people with?

I'm not for or against CW testing, I just think the test should fit the end use. I think CW has become a scapegoat for people who are unwilling to admit as a society we are getting lazy and want everything for nothing, and as a socienty radio is boring. It is not cutting edge technology at all....so why pick on CW?? Why not ban AM radio?

The fact is we all like different things, and there is room for ALL of us. Let's just not turn the thing open like a free-band, which is how it is headed. That's the next step, now that 5WPM testing did not turn things around like all the whiners thought.

A small modem box is not "a rack full of other support gear". I can
establish reliable contact with Germany using 50 watts on PACTOR II
when 100 watt CW is virtually impossible because of fading. CW is
certainly one efficient way of exchanging information but, IMO, it
is not as efficient as PACTOR II.

For those of you who need warning signs like "Don't grab the fan belt when the motor is turning", here are additional ones you may wish to save for later use.

1. On a blanket from Taiwan - NOT TO BE USED AS PROTECTION FROM A TORNADO.

2. On a helmet mounted mirror used by US cyclists - REMEMBER, OBJECTS IN THE MIRROR ARE ACTUALLY BEHIND YOU.

3. On a Taiwanese shampoo - USE REPEATEDLY FOR SEVERE DAMAGE.

4. On the bottle-top of a (UK) flavoured milk drink AFTER OPENING, KEEP UPRIGHT.

5. On a New Zealand insect spray - THIS PRODUCT NOT TESTED ON ANIMALS.

6. In a US guide to setting up a new computer - TO AVOID CONDENSATION FORMING, ALLOW THE BOXES TO WARM UP TO ROOM TEMPERATURE BEFORE OPENING. (Sensible, but the instruction was INSIDE the box.)

7. On a Japanese product used to relieve painful haemorrhoids LIE DOWN ON BED AND INSERT POSCOOL SLOWLY UP TO THE PROJECTED PORTION LIKE A SWORD-GUARD INTO ANAL DUCT. WHILE INSERTING POSCOOL FOR APPROXIMATELY 5 MINUTES, KEEP QUIET.

8. In some countries, on the bottom of Coke bottles OPEN OTHER END.

9. On a packet of Sunmaid raisins - WHY NOT TRY TOSSING OVER YOUR FAVOURITE BREAKFAST CEREAL?

10. On a Sears hairdryer - DO NOT USE WHILE SLEEPING.

11. On a bag of Fritos - YOU COULD BE A WINNER! NO PURCHASE NECESSARY. DETAILS INSIDE.

12. On a bar of Dial soap - DIRECTIONS - USE LIKE REGULAR SOAP.

13. On Tesco's Tiramisu dessert (printed on bottom of the box)- DO NOT TURN UPSIDE DOWN.

14. On Marks & Spencer Bread Pudding - PRODUCT WILL BE HOT AFTER HEATING.

15. On a Korean kitchen knife - WARNING KEEP OUT OF CHILDREN.

16. On a string of Chinese-made Christmas lights - FOR INDOOR OR OUTDOOR USE ONLY.

17. On a Japanese food processor - NOT TO BE USED FOR THE OTHER USE.

18. On Sainsbury's peanuts - WARNING - CONTAINS NUTS.

19. On an American Airlines packet of nuts INSTRUCTIONS - OPEN PACKET, EAT NUTS.

20. On a Swedish chainsaw - DO NOT ATTEMPT TO STOP CHAIN WITH YOUR HANDS.

21. On a child's superman costume - WEARING OF THIS GARMENT DOES NOT ENABLE YOU TO FLY.

22. On some frozen dinners SERVING SUGGESTION DEFROST.

23. On a hotel provided shower cap in a box FITS ONE HEAD.

24. On packaging for a Rowenta iron DO NOT IRON CLOTHES ON BODY.

25. On Boot's "Children's" cough medicine DO NOT DRIVE CAR OR OPERATE MACHINERY.

26. On Nytol sleep aid WARNING MAY CAUSE DROWSINESS.

Thanks, Hans.

>The fact is we've never had more technical resources
>available to us as hams, and essentially free for the asking in many
>cases.

Absolutley agree. And even when it's not free, the price is often far below what it used to be.

For example, becoming an ARRL member gives you access to online "members only" goodies like every QST Product Review since 1980. Those without the space or patience to collect old QSTs,QEXs or NCJs can buy the CD-ROMs. Freeware and inexpensive software for all sorts of ham radio activities abounds.

My favorite is N0HFF's excellent book on "The Art And Skill of Radiotelegraphy". Just search on that call in Yahoo and there it is - free.

Of course Elmering is needed now as much as ever - perhaps moreso, to point those in need in the right direction to find what they are looking for.

--

You wanna see Elmering in action, just read the Elecraft or glowbugs reflectors. Really cool!

The correct answers are:

* d) * Put them on 14.313 as Brother John and MXL are so booooring on
weekends.

* e) * At night put them up as co-hosts with corney-ell steve on 3.260 USB

There's another possible angle to this. Has anyone considered It was likely
the
radio practices by "fringe" ham radio nets that gave the impetus for
operations like the current 3.260 USB KSM clandestine station to start?
I often wonder if Reily H. can percieve the possible (?) link between the
fringe ham stuff and what has become America's first genuine
clandestine broadcaster on 3.260 USB ?

Off the wall? Non-sequitor? I wonder.

Again it is a cool mode, but just a mode. It is efficient with a
skilled op.

>>It would seem like it is time for a new CW band plan. Since class
>>of license no longer split the CW subband why not adopt a CW band
>>plan to the different speeds of CW and for data.
>
>Gosh, we had one. The FCC turned it over when they listened to Kenwood
>and W5YI.

What does the FCC have to do with it? There is a lot in the ARRL
band plan that isn't law. It is just a gentlemen agree that these
freqs will be used for a given purpose. I think this is far better
than having the FCC set the rules. They are away too slow in
changing.

>OK, lazy or unmotivated.

Is there a differents? It is still name calling.

>I don't ever plan on doing many things in life, and I still have to
>learn things I think I don't need. That is MY choice, not a "barrier".
>If I am too lazy or unmotivated to learn something, it's really my
>problem.

Why is it a problem? It isn't a matter of being lazy, but priorities. We have a budget of X heartbeats, we must invest them wisely. For some learning CW is a good investment, for others it isn't.

>No problem, that's why we need steps!!! We should have logical steps
>that encourage progress, and keep people from operating outside the
>limits of their experience or skills.

I agree!

>Why should a person who can't handle CW gain full CW access? Why
>should a person who can't understand SSB gain full SSB access? Why
>should a person who can't understand how to operate a station operate
>HF, where he has a dozen things he can screw up and bother other
>people with?

They shouldn't.

>unwilling to admit as a society we are getting lazy and want
>everything for nothing, and as a socienty radio is boring. It is not
>cutting edge technology at all....so why pick on CW?? Why not ban AM
>radio?

I would like to see the CW requirement removed completely. I would also like to see the CW subband preserve as long as there is amateurs that are using it.

>The fact is we all like different things, and there is room for ALL of
>us. Let's just not turn the thing open like a free-band, which is how
>it is headed. That's the next step, now that 5WPM testing did not turn
>things around like all the whiners thought.

I think we are very much in agreement on this one. I don't see any signs of it going to freeband, but I am new enough that I may not see the pattern. If it is going in that direction then we shouldn't lose sight of the brass ring with unimportant issues like CW testing.

Any system that sends error correcting information and uses a narrow
bandwidth would be better, I agree with that. But there is nothing
worng with CW.

It is better than any other non-error correcting mode we have.

I have no agenda against any mode, or anyone else's pleasure. The fact
is that CW is not a problem with amateur radio, it is not the reason
there isn't more interest. It is a whipping-boy for those hell-bent on
changing amateur radio into an expanded personal radio sevice, and it
is in the way of Kenwood dishing out radios to anyone who wants one.

All NCI business is conducted via email. We have very limited
funds and obviously can't afford to hold face-to-face meetings.
That factor alone makes for very limited "jawboning" and keeps
things very focused for us.

>Other than write
>letters to the FCC, I'm not exactly sure what NCI actually does for anybody.

Well we actually meet with the FCC too. Carl and I did
that last year as an ex parte. We both "funded" our respective
travel to DC ourselves.

I think that NCI's views on code testing are closer to my own than ARRL's.

ARRL is the only organization I know of that consistently represents Amateur
Radio across a wide range of venues.

I am a current ARRL member; I am not a member of NCI.

From: Jim Dockery <jdockery@erols.com>
Message-ID: <9ccrl2$2vg$1@bob.news.rcn.net>
Source record: 8469

I had to post this here in view of earlier posts....

Learn how to save lives with CPR and the use of an Automatic External Defibrillator.

It can be done with no liability for the user and purchaser of a defibrillator.

Thousands of people succumb annually to Sudden Cardiac Arrest. Many of those people would be here today if a defibrillator and trained people were nearby.

Think of your workplace. Where do you spend most of your waking hours?

For the equivalent cost of a decent PC at market prices along with software, your organization can acquire a defibrillator, become properly trained and save the life of a fellow employee.

Darryl,

From the record, it appears that in times of widespread disaster, those "primary" means of communication either fail altogether or are so overloaded as to be inaccessible. Amateur Radio has provided a valuable secondary resource in those cases.

I agree that hams need flexibility, but, OTOH, give a listen to 160 meters and compare the activity vis a vis the band plan. See what happens if a "violator" is told he is operating outside the ARRL band plan. Those band plans will, and should, remain as recommendations; ARRL does not want to have regulatory power.

Well, when I think of Pactor and the rest I think of a computer and a
big HF rig.

When I think of CW, I think of a key and a small radio and very low
power drain...something you can tote around in the field.

I guess if you consider a laptop and a SSB rig readily available, then
there are better modes (although they consume more energy).

>>> Lenny.

[apparently the FT-817 made it through FCC testing...:-)]

What about 1936 standards and practices? I just used technology as a point of reference...most in here weren't alive yet in 1936.

>> Right on. Somehow all the geekos can't visualize that all this
>>improvement helps CW just as well as the other modes. It's another
>>'don't want to'.

The improvement in technology is worthwhile for all modes, but that is still not a reason to retain OOK CW codings as a test element or epitomize CW as amateur radio skills.

>The guy works a day or two as a week at the local HRO. That one store
>is selling 50 817s a month. Two a day! Gotta be one of the hottest
>items to hit the ham radio shelves ever. It's gettting scads of ops
>back into cw who haven't used cw for years, he's one of 'em.

Yaesu dropped the price of the FT-817 from $950 suggested list down to $760. I should think that would be sufficient impetus to have more amateurs visit their radio stores. :-)

I'm puzzled by the "scads of ops back into cw" as the "reason" (implied) for the FT-817's success. It is all-mode (allocated) and works all the way up to 70 cm (missing the 220 band) but is only 5 W maximum PEP. It is advertised as a "back-packer" sort of portable. Do back-packing amateurs prefer CW over other modes? And why?

The FT-817 won't fit into a shirt pocket but maybe a coat pocket. Hopefull two pockets on the coat since the other pocket has to hold the key and antenna wire. [it is 5.3"W x 1.5"H x 6.5"D]

Was this all-mode, "all-band," portability state of the art in 1956? If so, or not, how did such technology affect standards and practices of that time, a whole generation after Maxim's demise?

How is that applicable to 1966 standards and practices and the
alleged inability to govern the US ARS from Newington?

>Any system that sends error correcting information and uses a narrow
>bandwidth would be better, I agree with that. But there is nothing
>worng with CW.

Faulty premise there of equating TEST with USE. Nobody is suggesting or implying elimination of CW USE in amateur radio. The NCTAs simply want to remove the code test.

Please cite the "necessities" of retaining the code TEST for all would-be radio amateurs. Concentrate on the test. Remember than the FCC licenses radio amateurs as part of a regulatory task. The license test is for the FCC's purpose and the FCC is not an academic institution.

The FCC is not chartered with any "moral and ethical" task of maintenance of some old, antiquated standards and practices or mythos about amateur radio.

>It is better than any other non-error correcting mode we have.

No. There is the faulty presumption that skilled code operators never (or hardly ever) make mistakes. The entire history of manual telegraphy is rife with mistakes happening in communications. That and the greater speed of tele-printing led the conversion of the commercial and military world to rely on teleprinters some while ago.

Morse code, even with very skilled operators running routinely at 40 WPM still take longer than slow voice by a factor of 3.

Morse code is not a mandatory mode for US radio amateurs except in two small VHF band segments, yet is the only mode skill ever required for any license class test.

Morse code has only one advantage that might possibly fit the regulatory task of the FCC. It permits communications, using a western alphabet set, between two amateurs who do not speak the same language. However, international communications' skill is not a requirement in Part 97 or 2.

>I have no agenda against any mode, or anyone else's pleasure. The fact
>is that CW is not a problem with amateur radio, it is not the reason
>there isn't more interest.

Are you the definite source of opinion expertise on why there isn't more interest? I don't think so. You have expressed your opinion. Nothing wrong with that. The fault is trying to denigrate "civilians" with morals, ethics, and motivation of your personal choosing.

It is easy to see why so many never bother with amateur radio as a hobby. That lies in a sometimes overbearing patrician and self-enobled opinion of their "expertise" in radio and the continuation of old, outdated standards and practices as the "goal of skill enhancement."

US amateur radio is a hobby. It is not some quasi-military "service." It is not some emergency "service." It does not need self-important torch-carriers and lawgivers to "enforce" traditions, standards, or practice beyond what is necessary for the FCC to regulate that radio service.

>It is a whipping-boy for those hell-bent on
>changing amateur radio into an expanded personal radio sevice, and it
>is in the way of Kenwood dishing out radios to anyone who wants one.

Is it? Or isn't it the "lack of motivation (for learning CW)" is the false and misleading phrasing of those who consider themselves elite and "leaders" of some virtual community?

Amateur radio is defined as an activity engaged in not for pecuniary compensation. That is why it is amateur. That is also a fancy phrasing for a hobby. An avocation.

It seems to be that hobbies ARE personal to the individuals involved. The ITU-R standards define amateur communications as having "trivial value." All of that adds up to a personal radio communications service. Personal.

If you wish to state that "civilians" are too lazy and unmotivated (to learn CW for a test) then I will have to ask who made you the great moral arbiter of amateur radio?

Why is there a CW test and how is it justified?

Oh, and Yaesu is doing the current round of price reductions in ready-built amateur radio equipment, not Kenwood.

Ed,

Of course your are correct. I meant to add that I think ARES
and RACES is very important to help with local disaster, even
the wide spread such as hurricanes. It may also be true that
EM units may still be working with old tech when disaster strikes
and the amateurs must come to the rescue. The point I am trying
to make is that mobile sat based high speed digital comm can be
purchased for less than $1000-2000 now including computer.

What can't be replace (at least not yet ;-) is having a human
out in the field. I think this is where ARES and RACES really
shine and save lives! I for one am really glad that ARES and
RACES is there!

The point that I was trying to make is that CW doesn't really
fit into the picture like it did once upon a time.

HAH! Got ya beat! Advanced in 1968, at the age of 14. Extra in 1970, at the age of 16. (2-year wait back then). Now you gotta collect on that lobster-dinner bet, Ed.

Back then we had 12 year old Extras. A few years ago, we had at least two Extras under the age of 11. And some really young Techs.

In my Novice test of 1967, there was at least one safety question that dealt with the precautions around high voltage. I remember laughing because one of the choices was "take out double-indemnity life insurance". I had to go home and look up what double-indemnity meant.

>before.

Can you give us some exact numbers? How many of each kind were there a year ago, and how many of each kind are there now?

Besides the Product Reviews, how many of the articles that would be of interest to a newcomer are in the members only area?

W1RFI has explained the criteria for what gets put in the members only category and what is wide open. I think the criteria used makes a lot of sense.

Do you think the ARRL should simply put all of their copyrighted material online for free?

>[is that a "pointer" to join the League? :-)]

Joining the ARRL is about the best deal a radio amateur or would-be radio amateur can make. QST alone is worth the price.

Sure wish it was that simple, Brian. It ain't. Alcahol can affect different persons somewhat differently, but there is a wide variation in the effects of the different drugs. Some are instantly addictive, one time and you're hooked, your life taken over by the craving. Far more crime is driven by drugs that is generally recognized. Much of the stuff wipes out the ability to think rationally, nothing matters except getting the next hit. And there is a fairly wide variation in the way different people react to many drugs. Some can use some drugs "recreationally" while others cannot, falling to the instant addiction. Some drugs can absolutely wipe out a normally functioning brain, causing the user to do things that are absolutely crazy, that he wouldn't think of doing normally. An 18 year old kid here, normal by all accounts and a good kid, got a snoot full of Meth and went absolutely

nuts, shooting a rifle into passing cars, houses, at people. It was sheer good fortune that no one was killed. He is now serving 40 years and wondering what happened.
I just saw on TV the other day where another Meth addict was in court for being a "hired gun" where a husband paid him to kill his wife. He needed money for more Meth. Today any fool with a few bucks for common supplies and a little time can make meth.

This is just a small sample. I know that some substances probably are fairly benign, to many users. And alcahol is no saint for sure. But turning it all loose would be a sure recipe for disaster for huge numbers of young, the clueless and those with poor self control. I think our problems would magnify overnight, bad is it is now. The crime rate would soar. And evidently Cecil would be happy.

All that said, I sure agree that what is now in place is pitiful, ineffecive and at that, selfperpetuating. It's not a war that we will ever win at this rate. I agree with Jesse Ventura, Hans' governor. He says we will never win the war on drugs by tryint to cut off the supply, they'll just change to some other source or route of delivery. It's got to be won at the consumer end if it is ever won. Don't seem to likely at this point.

No, you and Bill and Cecil say you believe that. Others, not so. You
haven't yet convinced me and many others that your opinion prevails over
a large body of evidence and testimony to the contrary. It is not likely
you ever will.

Don't you DARE come in here with that "murdered" crap! Funny thing, the only thing the anti-capital punishment people do is whine over the criminal and NEVER do they say a thing about the VICTIMS of their crimes. He should have to suffer in death and not just go to "sleep" after an injection. I would LOVE to witness him swing at the end of a rope or squirm in a gas chamber, or dance to the tune of 20,000 volts! GRRRRRR!

Phil, I don't think it really matters what the person claims.
According to Title 47, Sec. 95.426, the operator must allow an
inspection of his station upon request, which would include all radio
equipment used. If, during that inspection, an illegal device is
discovered attached his station (one indication, in addition to the
neighbor's complaint, that it has been used), the use of the illegal
device in itself is a violation under HR-2346. At that point, it
really doesn't matter where the original non-conforming signal came
from. Now, we could sit here and argue for days whether a device
attached to a station, along with an interference complaint, is enough
to prove that the device has been used, but neither of us will be
certain until a number of these HR-2346 cases are resolved in the courts.

I understand that, Phil. However, as I said earlier, these cases
will be somewhat different than the ones you were involved with at the
FCC (misdemeanor, smaller fines, etc).

No, Bill, I have a better idea - you pay careful attention (because I've answered that very question at least seven or eight times in this thread already). According to Title 47, Sec. 95.426, an operator must make his station available for inspection upon request, which includes all of the radio equipment used. That, Bill, is how the cop gets to see the radio in a person's home.

> And as Phil Kane noted before...the cop has NO
> right to insect any station at all. Indeed,
> the person could simply state: "I have NO station
> of any kind."

Title 47, Sec. 95.426 (and please don't ask what happens if the operator refuses to allow the inspection - I've answered that several times before also)

> The rules of law, prosecution, etc still prevail.
> Assuming someone is "charged", the person can always
> enlist the help of an attorney. Indeed, I suspect
> that would happen far more than you think.

We're just going round and round in circles, Bill (and Phil). All of the stuff raised in the last few messages has been discussed in this thread before (much of it several times), so why keep repeating the same stuff? I, for one, have better things to do. So, with that in mind, I give up - you're right, Bill (and Phil), HR-2346 is completely unenforceable. The attorneys at the FCC who helped to write HR-2346 were wrong. The attorneys on capital hill who sponsored the bill were wrong. The attorneys on capital hill who voted to pass the bill were wrong. The attorneys who handed the bill to the president to sign were wrong. All of that effort was a complete waste of time - the new law is absolutely unenforceable.

Yep, both the 2950 and 2970. And lets not forget the Uniden HR-2510. And then there are the "export" radios - the galaxy models, the SuperStar models, and so forth. And add in the most common linears - the Texas Star models, and so forth. It would be one heck of a list.

HR-2346 is just one of dozens of meaningless "feel good" bills that
gets passed each session so the congress-critters can go back to
Wisconsin (or where-ever) and say "look what I did for you".

I'll be surprised if it eventually leads to a single conviction.
Hell, I'll be surprised if it even leads to a single court case!

Which ones, Dick? In my younger days I tried most of the ones that
don't require a needle and never got hooked on anything except alcohol.

> And evidently Cecil would be happy.

Freedom for adults makes me happy, Dick. Your attitude toward legalizing
drugs and dropping the Morse code requirement are exactly the same - the
sky will fall! I simply don't see why treating marijuana like alcohol
would not be an improvement over the present situation where people
are sent to prison and their property seized just because they are
in possession of some God-given weed. The governor of New Mexico
agrees, along with lots of other rational people.

I'm at a bit confused here.

1. Why in the radio news group?
2. "Crucified"?
3. "Murdered by injection"?

The 100 + people "killed" by him were what? MURDERED! They didn't choose to be "put to sleep - permanently". They had no warning. No chance to say good bye. Why is it all the sudden we are supposed to feel sorry for the murderers? I don't get it. What about the VICTIMS? What about their rights?

I don't like to see anyone die either. Putting him to death will not bring the others back. But Death is the law of the land in most cases. He knew it before he planted the bomb. He rolled the dice and lost. Let him face the Angel of Death like all before him, especially at his hands.

I can't hold remorse for anyone who kills in cold blood. Self Defense is one thing, but this was not in self defense. As to his motive of what happened in Texas, two wrongs again, do not make a right. WE as a nation need to put a stop to all the violence if we don't want to see ANYONE else die in cold blood, be it by a murderer, law enforcement or other wise (i.e. Death Sentence). Death in this country anymore, is a game. It has to stop.
I don't know all the answers, if any, but it definitely has to stop.

One last point..... He had a chance to ask for Clemency. He refused. Now they are asking a President, who by the way, comes from a state that has had a lot of, if not the most Death Sentences carried out in recent history, to stop it. I doubt that even if he could stop it, he would.

If all who are begging for his life to be spared, were to have had a loved one killed, especially one of the children who did nothing to anyone, I doubt they would be begging for his life to be saved. They would most likely be begging for a chance to stick the injection in personally. If God wants him spared, he will be spared. Nothing will cut that short.

Now, can we get back to what this forum is supposed to be for.....
Radios.
Seems funny, all the forums anymore are being corrupted with everything BUT their intended topic!

My "personal" opinion only.....does not reflect the opinion of the ISP or anyone else affiliated with the transfer of this message.

I have stated repeatedly, and you have just as often ignored, that the entry level tests were never designed to be that difficult, and any half bright kid could learn enough about the material to understand it sufficiently to pass the tests. They were NOT based on exact previously-given Q&A, as you well know. The Advanced was tougher by a bunch, and the Extra was more involved and it would not have been possible to memorize your way through it in any concievable time frame, at least. Of course you wouldn't know about that, since you just recently took your Extra written, which you naturally made 100% on, having had all the exact questiona and their exact answers to memorize well in advance. So keep up the fiction if you wish, we all know the facts.

Yes, I'm aware of the findings of that board. However, I'm very uncomfortable with the idea of ending a career based on how many seconds a person looks through a periscope. I don't think a single submarine commander has ever thought to have a stop watch counting down the "recommended" seconds to look through a periscope. In other words, the punishment just does not fit the offense. In fact, I'm not totally convinced that an offense that justifies punishment actually occurred.

> At sea, the power and authority of a Navy
> Captain is total and absolute.

No, it isn't. There are literally hundreds of rules and regulations that control the actions and behavior of a ship's Captain (in almost every situation). Even under the most dire circumstances (actual combat), a Captain's every move is subject to review by his superiors.

> So is his responsibility and accountability
> for the safety and performance of his ship
> and crew.

Accountability does not equal punishment, Hans. Yes, a ship's Captain has a responsibility to see that his ship and crew perform properly. If he is not able to do that in a reasonable manner, than he should be removed from command (accountability). However, that does not suggest that a Captain should be punished for the mistakes of a crew member. Even accountability (removal from command) does not extend that far.

Modern naval vessels are extremely complex. Today, there is no way for a ship's Captain to even be aware of what is going on throughout a vessel, much less have total control. As I said earlier, at some point a Captain must be able to depend on his crew to perform their job correctly. This is especially true for a vessel as complex as the submarine involved in this incident. So, by all means, a captain should be held accountable for his actions, or for that affected by his actions, but no person should ever be punished for something outside his control.

> I'm surprised the same is not true in the Coast Guard.

Hans, I've already said the opinions expressed are my own. The
Coast Guard is not involved in this discussion, so please leave them
out of it. Thanks.

The illegal alcohol trade did not end with prohibition's end, Brian. Actually, if you check your history books, you'll see that the illegal alcohol trade actually increased in the years after prohibition came to an end. During prohibition, the illegal alcohol trade was limited mostly to the larger cities. However, in the years following the end of prohibition, the illegal stuff just got cheaper and trade spread into small towns throughout the country. In fact, the war on illegal alcohol did not reach its peak until the late 50's and early 60's, and it still exists to some extent today.

Likewise, and perhaps more important, the use of alcohol increased dramatically following the end of prohibition, and has continued to rise to this day. And, likewise, the negative effects of alcohol (alcoholism, DUI, etc) has risen steadily since the end of prohibition.

So, actually, we learned a lot from prohibition, and very few want to repeat those mistakes with drugs.

>>>>>>

The part which you, and the usual group of liberal whiners from which you may exclude yourself if you wish, interpret as meaning that I and others, as a society, cannot protect ourselves from the perversity of mankind with requisite means, including capital punishment, when individual guilt has been established beyond reasonable doubt.

A few general remarks about 'crucifixion': it seems to me that McVeigh of late sounds not like Dismas, but like Gesmas. McVeigh can be glad his passage from time into eternity will be effected not with having his body subjected to the unexpected and large-scale movement of the physical world surrounding him, or by the reality of Roman-style crucifixion (those goodfellas knew their biz), but by OD. How poetically perverse.

>The point that I was trying to make is that CW doesn't really
>fit into the picture like it did once upon a time.

I think it has been decades since OOK CW has played a major role in emergency communications. Voice or digital modes have been the method of choice for a number of valid reasons.

It would be interesting to know if there are any specific examples of CW use in a time of actual emergency other than those cases where it was simply the mode of choice of the operator. Has there really been a time when SSB would not get through and only CW was able to get the message out of a disaster area?

Even if so, there are modes and techniques that can beat CW by quite a margin. If the purpose of CW testing really is to ensure that there is a mode that will get through when nothing else will, it would be even better yet to mandate that amateurs maintain digital capability using some of the modes that can communicate at levels tens of dB below the ambient noise level in a 500 Hz bandwidth. Of course, that isn't likely to happen, primarily because the FCC does not see the purpose of CW testing to be to ensure that the mode is available in times of emergency.

The entry level tests now are harder than they were when I studied the 4-page Novice study guide for my entry-level exam.

>They were NOT based on exact previously-given Q&A, as you well know.

"Exact?" Not exactly. Close enough that I was able to "study" questions that were virtually identical to the exam the FCC gave me. Yes.

>The Advanced was tougher by a bunch, and the Extra was more involved
> and it would not have been possible to memorize your way through it in
> any concievable time frame, at least.

I believe you are correct. However, let's make sure that new hams understand that in context, Dick. Back in the days I took my General, that General gave me all amateur privleges for studying a 16-page study guide until I had it memorized. The Advanced and Extra were "vanity" licenses that conveyed no additional privleges other than the ability to pay for a 1X2 call sign, if memory serves. Most hams stopped at the General.

>So keep up the fiction if you wish, we all know the
>facts.

Yes, the facts are that hams in my era passed their General exams by a combination of studying, memorizing, guessing and just plain hoping a subject or two didn't appear on their exam. The facts are that the General that conveyed all amateur priveleges could be passed by studying a 16-page study guide until one had it memorized.

The fiction is that the hams of your era learned every single detail for their exams and the new hams of this era are memorizing over a thousand questions without understanding. I have little doubt that you actually believe that, but for the life of me, I can't imagine why.

>before. [is that a "pointer" to join the League? :-)]

Yes, it is, Len.

I am the one who made the decisions about which articles should be members only and which articles should be public. Those that serve the goals of Amateur Radio as a whole are in the public domain -- RFI, safety, helping new hams get started. Those that help individual hams with their personal hamming are on the members-only site.

I am sure that those who choose not to receive QST magazine will understand that they do not have access to some of the articles that have been paid for by those that do choose to get it.

> Do back-packing amateurs prefer CW over other modes?
>And why?

For the most part, I think they do. With the marginal antennas and low power,
CW is more effective than SSB most of the time.

>How is that applicable to 1966 standards and practices and the
>alleged inability to govern the US ARS from Newington?

ARRL does not govern the ARS, so its alleged ability to do so is moot.

There is not any more new hams this year
then there was last year. The changes have
been class upgrades.

The solution to this key wiring deficiency is
to enact an international requirement for
a pass/fail exam requiring an applicant to
physically wire up a key. Generals would be
require to wire-up a two wire straight key, and Extras a
three-wire lambic key. Since this is a new requirement,
all hams would be required to pass the exam
with one year or lose their license.

Hello W6DHK: Yes good point, this could make a lot of money if produced correctly.

They could also auction off the "Throw the Switch Job" on E-Bay, and free closed circuit TV to the victims.

Then this brings up the possibility, of all the others on death row.....

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

What about the Yaesus, Kenwoods, and Icoms. Back in the mid 80's, Most of the freebanders seemed to run Yaesus and Kenwoods with the FT-757GX (& GXII) and the TS-140S being the most popular models. Now it seems the FT-840 and the IC-760MKIIG seems to be the prevalent "high end" 11 meter "weapon of choice." Shouldn't we include them on the list as well?

I know plenty of licensed amateurs who own Rangers and Lincolns (The latest incarnation of the HR-2510) capable of 11 meter transmit. My question is are licensed amateurs "exempt" from the list? What about an unlicensed person who claims he's just SWLing until he gets his ticket? Can a ham legally own and use a Texas Star on 10 meters? Remember, these are just questions because I'm curious. No flames please. Thanks and g'day. (I'm in an Aussie mood today:-))

Not only was the way Dick did it superior, but it is now impossible for
anyone else to do it the way he did it in the past so all new hams are
automatically inferior to him with no hope of ever catching up and being
his equal. There are at least three others on this newsgroup with that
same delusion.

> Did you learn this by talking to the applicants?

In some cases, yes. In others, it became quite apparent through
extended conversations in which they had no knowledge of basic subject
matter which was clearly a part of actual study for their tests. Then,
of course some have stated categorically, even here, that was what they
did. But of course we can ignore all that, can't we?

Are we really to assume that
> your demeanor with them was so kindly that they opened up to you and confessed
> that they, to a soul, chose to enter ham radio and "recognize correct" answers
> to over a thousand questions because they didn't want to learn anything?

This little tidbit just illustrates how far off base you really are.

>

> they want to learn what ham radio is about and enter something that will give
> them a lifetime of learning and experience. Just like nearly everyone here
> did, whenever they enter ham radio.
>

I offer that your attitude is as outmoded as an NCI director sees Morse
code. Most who choose to enter ham radio do it to talk on the radio. Of
course some are already technically involved, and these people pose no
problem to the ARs, nor the testing to the m. But the official attitude
of "let's load it up with warm bodies at all costs" is dangerous and
destructive.

> The premise that you offer that old time hams all wanted to learn and that new
> hams all don't want to learn is not believeable.

Thanks for misstating amy premise, yet again. My premise is that for
any license beyond entry level the applicant had little choice but to

learn. Today that is not so.

All that is the predictable outcome of making it illegal in the first
place. It took 30 years to recover from the abomination that was
prohibition. Organized crime that was spawned during prohibition
still plagues us today. Now we are repeating our past mistakes as
far as drugs are concerned and organized crime is bigger than
most governments. When will we ever learn? Legalization is an idea
whose time has come. Legalize it and tax it. Turn it into a governmental
cash cow instead of a governmental black hole.

> Likewise, and perhaps more important, the use of alcohol increased
> dramatically following the end of prohibition, and has continued to

> (alcoholism, DUI, etc) has risen steadily since the end of prohibition.

The positive effects of alcohol have also been recognized. The latest
study shows that two drinks a day is good for your health and is
preventative of heart attacks and strokes. Everything in the world
can be used either for good or evil, Dwight. Medicinal marijuana
has some outstanding characteristics. If it wasn't a class 1 drug,
it would be an effective prescription drug.

Hans:

To say this places you on the same low moral plane as Mr. McVeigh
himself. I personally do not subscribe to the notion of "an eye for an
eye." Capital punishment serves no purpose other than to satisfy an
ancient urge for revenge which still poisons the psyche of modern man.
We cannot claim to be civilized people until we can see our way clear
to spare the lives of even the Tim McVeigh's of the world, in order to
give them the time they need to adequately reflect on their evil deeds,
accept responsibility for them, beg the forgiveness of their victims, and
seek the salvation of their souls before their own deaths. In the
meantime, their bodies can be warehoused economically and efficiently
in stark, isolated quarters -- given the bare essential necessities of
life, for a mere fraction of the cost of the expensive, publicly funded
appeals and legal acrobatics needed to keep them alive on Death Row
for decades after their convictions.

Capital Punishment is indeed cruel and unusual punishment in these
enlightened times. I am in favor of total abolition of the death penalty.

Bill:

I also abhor the idea of Timothy McVeigh being executed, in spite of his heinous act. I believe he should be forced to live out his life spending 23 hours a day in an 8x10 cell, reflecting on the misery he has inflicted on his victims and their families. In these days of social enlightenment and modern penal technology, there is no longer any need to impose death sentences on even the most barbaric of violent criminals. If "an eye for an eye" is in the Bible, then the Bible is wrong.

Larry:

Interesting. I never realized that the purpose of the 13- and 20-WPM
code tests was to "block competent missionary operators" from
holding General-and-above amateur radio licenses. I would have
assumed that truly "competent" hams, regardless of their profession,
would have no problem with code testing at those speed levels,
considering the fact that tens of thousands of hams from ALL walks
of life have successfully met that standard in the past.

BTW -- when I was first licensed in the early '80's, and living in
Maryland while stationed at Andrews AFB, I had good friends who
were Extra-class hams, knew and used CW extensively, and were
missionaries in the Seventh Day Adventist church. I would use
them as my model for "competent" missionary hams. I'm sure they
would exceed your own standard by a considerable margin.

So you've said -- dozens of times. What I still want to know is: What
do *professional* engineering credentials have to do with one's status
as an *amateur* radio operator? Will you please devote a few paragraphs
of your logical reasoning to *that* issue? Show all of us why a person
who holds at least a B.S. EE and doesn't know the Morse code is
more qualified to be an Extra-class AMATEUR radio operator than
any other Extra *with* useful proficiency in this mode? In fact, leave
out the Morse code and just relate your professional engineer's
technical knowledge to the AMATEUR radio service in terms of
practical communications capability in ANY mode. I'm sure that
thousands of Extra-class hams who are doctors, lawyers, teachers,
bus drivers, airline pilots, sea captains, policemen, judges, janitors,
housewives, high-school kids, rock stars, TV and movie actors and
actresses, clergymen, nurses, and paramedics -- not to mention
thousands of other non-engineering professions -- want to know!

I couldn't have said it better myself. What we're seeing here is the true
nature of the NCTA. Like all liberals, they will stop at nothing to discredit
their opposition, while using discreditable tactics in the process. The
good thing is that among reasonable, logical, and truthful people, the
liberal no-coders tend to cancel themselves out.

It is probably cases like McVeigh's that keep it around. Before it became
so hideously expensive to execute anyone, it was cheaper to hang the
criminal -- look at the long list of crimes that had capital punishment up

to the 19th Century and the use of 'transportation' to keep the bloodbath at a gentle ladylike belch.

The problem with capital punishment in practice if not in theory, as Justice Blackmun finally decided for himself, is that it is applied far too often to the racial minorities, retarded, and poor of society (not asking it for O.J. to my mind makes virtually all California executions illegitimate) and not to WASP-types.

There is also the minor problem of getting the wrong man. I lived in Wisconsin for 18 years which executed the wrong man in 1852 and hasn't done it since. Given a judicial system which has no mechanism for investigating wrongful incarcerations and executions (in fact is designed to sweep them under the carpet) that doesn't come near the level of investigation of air crashes or train wrecks get, it does not seem reasonable or moral to trust the system to kill anyone. Several states have come to this conclusion.

Finally, executions are extremely corrosive to the prison staffs that have to carry them out. Nebraska, where I am living these days, puts Death Row in one slammer and does executions in the old bastille in Lincoln to keep this down to a minimum. At least the staff in Lincoln does not get to know the condemned. Lethal injection states often have a problem finding staff with the medical training who will do an execution. Personally, I always thought the US Army MP manual had the formula for doing a first-rate humane hanging.

Before it opened I had the chance to take the tour of the Columbia Correctional Center in Portage WI where Jeffery Dahmer was sent; even took a whiz in the very bathroom where an inmate hid to brain him. The place has 450 beds, 250 for those being rehabbed (?), 100 for lifers who are there to scoop mashed potatoes, and 100 for head-cases who have to be somewhere. In the area away from I-39 and behind the buildings is the coming, going, and discipline area; believe me it is not nice to make them mad at you. If you get the chance, take the tour. If this place rehabilitates anyone, he deserves a pardon some years later. Of more recent years we have this chain-gang mentality that keeps a kid who did something remarkably stupid at 19 from ever voting among other things again.

At the very least you will come away with the certainty that vast quantities of money are being spent to achieve a very half-vast result. Capital punishment is only part of the idiocy.

Larry:

Great idea -- I'm all in favor of it. And since those who vigorously
supported a reduction in the code testing requirements have always
claimed that this would bring about a higher level of technical
knowledge in the ARS, I believe that there should be an international
requirement for all new hams to take a stack of old TV's and VCR's
and build a functional, multi-mode, 160 thru 450 MHz transceiver
with the components thereof. The only new components that would
be permitted would be metal or plastic components for a hand-built
case for the completed rig. This should be completely within the
capabilities of all of the young, computer-literate, technical geniuses
who have been "excluded" from amateur radio by the archaic code
testing requirements for so long. I can't wait to read about the
results of the first round of new ham "tests" in QST and 73.

Since knowledge is the key, and all these new yahoos are Technical Gurus, then I guess what we should do is get rid of CW Testing, and present Memorization Test, and require all new No-Codes have at least a B.S. EE, if thats to tough then lets require at least and 8th Grade Education. Now that sounds like a good compromise for getting rid of that nasty CW thing.

The common element between the tragedy and the Morse code exam requirement is misguided US national and international policies. Policies that defy common sense and law.

From a CNN story: The Pentagon pointed out [in 1994] that the United States argued vigorously after the Soviet Union shot down a civilian Korean jetliner "such actions violate article 3(d) of the 1944 Convention on Internal Civil Aviation and customary international law."

ITU rule S25.5 and FCC rule 47 CFR 97.503(a) are unnecessary, bad public policy, and not in conformity with 5 USC 706.

The FCC is moving right along with its housecleaning work, now time for President GW Bush and Secretary Powell to review President Clinton "war on drug" aerial combat polices.

Take this as fact: The death of the woman and her child had nothing to do with amateur radio operation or with mores code testing. That you tried linking the two reveals you to an opportunistic and self-serving boob.

Ed, the FCC dropped the 13 & 20 wpm code exam because it failed to serve a regulatory purpose, not in conformity with 5 US 706. While some argue that it was adversely effecting the numbers, it was not the primary reason for the change.

If the number of licensees was growing at 5% per year, do you think the FCC would have come to a different conclusion?

I assume this would only be for Extra class applicant and licensee.
All Extras would have the privelges reduce to General until the met
the new HIGHER standard.

Several years ago, 73 Magazine had some good articles on build thing
out of old TV sets.

How do "they" beg the forgiveness of their victims if the victims are already dead, Larry? Why should a murderer's life be spared when he/she has taken away the life of another(s). Why should he live when he has deprived a child of his parents, or parents of a child, a wife of her husband? I say BURN every last one of 'em.

I don't know if this is liberal, conservative, or BIG BUSINESS. Lately, all I read about is how this large corporation or that large corporation is building in China. Don't kid yourself, big business is running the country. I hope you don't think they only contribute to the Republican party. They want whoever ends up in office to be indebted to them. I look at the huge tax breaks given to big business and want to cry. Spend hundreds of thousands of dollars in tax exemptions, forgiven loans, whatever - just to create a job or two (divide the number of buck$ spent by the jobs created). This leaves small businesses and individuals to pick up the tab. Even natural gas and electricity - now there is a charge just to be connected. Oh, then the storage charge. This means the utility (Rochester Gas & Electric in my case) can charge only 8.5 cents per kilowatt hour - by adding the $17.00 monthly charge for electric, it averages over 12.5 cents per kilowatt hour to me - but the charge disappears, in essence, with the large usages of big users. Same with natural gas. Can you imagine, with the average price of gasoline at say $1.70 per gallon, a station charging a fee of $5.00 to use their pump (storage fee?) and then sell it for $1.50 per gallon? As long as you fill up to the tune of over 25 gallons, you make out. Said gas station would be out of business very quickly, but the utilities are still monopolies and that isn't about to change.

You left out one - Learning.

The facts are that the General that
> conveyed all amateur priveleges could be passed by studying a 16-page study
> guide until one had it memorized.

Maybe so...but by the time you did you LEARNED, necessarily, something
about the subject matter. It was not just a matter of making word
associations that you could recognize as pairs, as it is today.

> The fiction is that the hams of your era learned every single detail for their
> exams and the new hams of this era are memorizing over a thousand questions
> without understanding.

The fiction is that you would even make such an invalid statement. I
know that when I took the Exra exam I was far more learned than as when
I took the Novice or General, and I've sakid that many times, for you to
ignore. Just as you continjuously ignore the fact that no one EVER
attempts to memorize the entire question pool.

> I have little doubt that you actually believe that, but
> for the life of me, I can't imagine why.

You have your own views of where you want to help the ARS go, and I
amd my 'assertions' don't fit, so you have to see to it that I can't be
accorded any real credibility. That's reason enouth, evidently.

> However, I'm very uncomfortable with the idea of ending a career
> based on how many seconds a person looks through a periscope.

His career didn't end because of how many seconds he peered
through a periscope. His career ended because USS Greenville
was so poorly prepared for a routine peacetime demonstration
drill that it failed to detect a 500-ton fishing vessel, and
sank the vessel at a cost of 9 lives, while negligently hazarding
a multi-billion dollar nuclear submarine and it's crew.

The responsibility for the training and preparation for that drill,
plus the safe execution of the drill lies directly on the Commanding
Officer. He got off easy.

"Thou shalt not kill" lost something in the translation. It should
have been "Thou shalt not commit murder". Consider all the people
who were killed, at the command of God Himself, at the Battle of
Jericho and elsewhere. God Himself, killed all the first born of
the Egyptians and drowned their fathers.

>(http://www.arrl.org/tis).

From what I see, the choices are pretty good. The only info that would be of real, near-universal interest to a newcomer, that requires membership for access, is the Product Reviews. But they fall under the classification of "being primarily of interest to the individual" rather than "ham radio as a whole".

Not only that, Larry, but the Feds are doing exactly what McVeigh wants them to do -- allowing him to "commit suicide-by-cop, deluxe style". Besides being undeterred from his act by the death penalty, he actually increased the scope of his crime so that he would be assured of receiving it upon conviction. He is an enthusiastic product of the 'culture of death'.

BTW, this thread is coming in at 30 over S9 on my troll-o-meter down here in Arizona.

Give us an ever-loving break, Dick. Boosting your sagging ego is not a good enough reason to ignore the truth. Please try to enhance your self-esteem without denying reality.

The 1957 ARRL License Manual states: "If our *ANSWERS* sometimes seem to the initiated to be naive or incomplete, rest assured than they are *SUFFICIENT* for the purpose." Which means that word associations have always been possible (at least since 1951). What is it about " our answers are sufficient" that you do not understand?

Ed, Bill, and I all rote-memorized the Q&A to pass our first exams. We would not have passed them otherwise. That it hair-lips you to admit the truth is your problem, not ours.

Your argument that you achieved a level of knowledge that is not possible today is sheer nonsense. You could have just as easily rote-memorized the Q&A as Ed, Bill, and I did. You probably did just that and presently cannot accept the psychological pain of knowing that is exactly what you did so you are compelled to deny reality. You are addicted to your irrational beliefs about past ARS testing. We understand your pain, Dick, but we are not going to enable you to ignore reality. It's called "Tough Love".

Yea, it's real easy to memorize some simple sayings, laws, slogans...
Catholics are good for that.

It's harder to actually THINK about the God who commanded that command,
and then told the same people to go into the land an UTTERLY destroy all the
inhabitants.
Obviously, there is a problem with simple interpretations.

on
>the members-only site.

"Those that serve the goals" are then in your personal judgment.

I'll have to ask the reasoning for a couple of the "members only" category -

Receiving Wire Antennas. [specifically labeled as 'receiving'] Is there something "different" about radio physics where receiving radio signals from hams is different from receiving radio signals from all other radio services? I'm not trying to be snarly there since, as a non-member, I can't find out what is under those articles but I have to wonder about the "receiving" part as it pertains to only members.

History of Amateur Radio. It would seem that newcomers would want to learn more about that history written by the ARRL to find out more. Of course, that could have an alternate of having to buy the Handbook which contains an encapsulation of that ARRL history. :-)

Smith Charts. Tutorials, I'm sure. Everywhere else in the RF world those Phil Smith charts are Primary as to knowledge and relate very well to impedance/admittance, transmission lines, and so forth. Sorry, but I cannot see that as a restricted-access item unless there is some strange need to keep beginners or newcomers or non-members from basic knowledge of Z and Y. Okay, I'll agree that one is borderline.

>I am sure that those who choose not to receive QST magazine will understand
>that they do not have access to some of the articles that have been paid for
>by those that do choose to get it.

I'm also sure that the ARRL would think that the new past-issue sets
of QST and QEX on CD-ROMs will sell better and make more profit.

Now don't get me wrong and get all overheated. I will accept a $5
charge for xerocopies of particular articles as being generous. No
problem. Anything under a $100 for a whole year's worth of issues
on CDs seems reasonable to me.

But, I can also access many past articles in the industry trades
such as EDN, Electronic Design, RF Design, Microwaves and RF
all for free through their website even though I get those in hardcopy
every month.

I'll defer on discussing copyrights, author's compensation, and
free legal reprinting of articles as I've done that before.

I'm not sure I see where all the restricted access on past articles
is being of any benefit other than selling CDs. Particular
membership-only information makes sense in having restrictions.
Restricting information on technology (as in "we know what is
best for you" et al) can backfire.

Cites of 47 CFR 95.426 or HR-2346 aren't needed since a look at
the FCC Enforcement Bureau "Inspection Fact Sheet" page will
show that authority to inspect radio transmitting equipment is
covered under Section 303(n) of the Communications Act of 1934
and 47 CFR 0.111(a). Those cites from the FCC's web page
mentioned. Part 0 outlines the organization and function of the FCC,
is available free from the USGPO via link on the FCC website.

Voice communications can be done "mobile-in-motion" (while hiking, especially with a staff in hand). It is difficult (but not impossible) to do that while transmitting with a key. I will agree on the low-power aspect for portability being important.

In the context of my message comment, I was citing the FT-817, a new lightweight, low-power, ALL MODE transceiver that covers 160m through 70cm. In that context I was wondering how this new product benefitted the CW operator compared to all other modes available in the transceiver. The FT-817 is a new Yaesu product and a check of the Yaesu web page still shows only the preliminary data having the "not yet approved by FCC" disclaimer at the bottom. If there is some new feature enabling better CW in this particular product, then that should be interesting to many.

>>How is that applicable to 1966 standards and practices and the
>>alleged inability to govern the US ARS from Newington?
>
>ARRL does not govern the ARS, so its alleged ability to do so is moot.

I disagree on the use of "moot" in context. The ARRL has so strongly influenced the FCC for so long a time and made that influence and resulting action clear to so many that the "ARRL decisions" are almost a de facto "ruling" of the US amateur radio community.

The large membership count (162,671 in June 2000 according to QST Publisher's Statement) and the publishing part (profit making) of the ARRL enables retention of a legal firm in Washington to represent and lobby ARRL decisions and policy with the FCC over and above that of any other US amateur radio organization, certainly over the same abilities of individual radio amateurs or citizens. That, along with a very long-time self-promotional advertising of itself in its own publications has certainly "imprinted" the "authority" of the ARRL in many

radio amateurs' and radio-involved citizens' minds.

I'm not saying the ARRL is doing a "bad thing" with the above, but denial of the most obvious quasi-offialdom of the ARRL for decades is somewhat ludicrous.

Which I mentioned in my reply of two days ago (cf: HR-2510).

The problem with having an "illegal CB list" with these radios on it is that these radios are perfectly legal in the radio service they were built for (amateur). That's bound to get some local cop going after amateur operators, not realizing that he has no authority to do so, with the amateurs then going after the cops via a 42 USC 1983 lawsuit aimed at having their [4th amendment et. al.] rights violated.

All this will do is teach cops to treat this law, formerly HR-2346, as a "blue law" at best, and definently something to ignore, thus nullifying it, but only after significant taxpayer expense as a result of being sued.

I do believe that it will lead to a court case: Of some FCC licenseholder suing a municipality over having taken the law too far (i.e. having been arrested as being an "illegal CB'er" when operating properly within a licensed service he holds a license for).

...But have those citations and regulation sections yet been amended to permit inspection by non-FCC personnel who are properly charged with enforcing these new local "CB laws?" I doubt it. Until the FCC makes that change, there can be no inspection by non-FCC employees.

Bingo.

Chrisitanity was not the only religion under consideration for becoming the
state religion at the time of Constantine, either.

The idea of separation of religion and government is quite recent - only goes
back a little over 300 years. It was considered a radical "experiment" at the
time....
>
>Taking the easy path of co-opting the locals is probably the only way to
>get the job done. But it does confuse hell out later generations. Given
>that Halloween is now second only to Christmas for selling stuff, maybe
>later generations deserve it.

Actually, I see it a little different. People all have certain basic
psycho-spiritual needs, and religions adapt themselves to meet those needs.

Consider Christmas. In Europe, the days grow VERY short in winter (Philadelphia
and Naples are at approximately the same latitude. Northern Europe is about as
far north as Newfoundland). In pre-Edison days, winter was a very dark time for
most Europeans, and it was easy to think that the light would never come again.
Long before SAD (Seasonal Affective Disorder) was described by medical folks,
the mental problems associated with lack of daylight were being experienced.

Most Euro cultures developed ways of determining when the days were actually getting longer (the light was returning) and had festivals to celebrate the "coming of the light". Since Christians describe Christ as "the light of the world", it didn't take much to see that it made lots of sense to put Christmas (the day the light of the world arrived) on the first day when the days were measurably longer with the available technology - Dec. 25.

If a religion doesn't address people's needs, they change it or go elsewhere if they can.

The death penality doesn't make any sense in McVeigh's case because he *wants* to die. How is death a punishment if that's what the person wants?

Room 101 would be the best punishment.

Dwight Stewart made a mention of a Part 95 regulation. I just added
an overall note to show that inspection is possible in any radio
service (including no search warrant required according to the FCC).
Any radio service. That includes amateur radio.

It might be fun to prognosticate on a House Bill not yet passed into
law...but, isn't it more prudent to consider what is already law now?

There is no common element which ties morse code testing to the shooting down of a missionary aircraft in Peru, Larry. You've gone from being a bad homemade lawyer to a bad homemade expert on U.S. policy foreign and domestic. Did you find a book on U.S. policy in that musty trunk where you stumbled across the law book?

Having lived in Wisconsin right on the 45th parallel I can testify about 6
hour days.

Celebrating the return of the Sun when you don't have a clue of the
process is fairly universal and not confined to northern latitudes. One
of the competitors was in the chain of Persian Dualism where the God of
Light (Mazda; the Japanese company got started making gas-filled light
bulbs) and the God of Darkness fought it out with the outcome in doubt.
Christianity skirts Dualism with all of the dancing ability of Fred
Astaire.

I agree the human race seems to have urges both to explain and commemorate (if not to control like hurricanes off the East Coast). It has always interested me that most religious ceremonies are celebrated at the Church and the Saloon in that order. The Unitarian clergy will generally perform virtually any ceremony one finds meaningful. This led Jack Mendelsohn from Indianapolis (the man who did the grunt work for Jesse Jackson in Syria) to be among many other things the chaplain for the Albert Schweitzer Motorcycle Club -- once performing a wedding sitting backward on a Harley.

This urge seems to explain the human interest in the T O and E of the various gods which led to the Doctrine of the Trinity, a concept which about 2 people in 100k actually understand (me not among them) and half of them are atheists. One of my favorite OT stories is the man so impressed by Elijah that he took home a box of dirt to worship Yahweh. The idea that a local area had its primary god was prevalent at the time. For a king to kill his son on the walls of the city was pretty effective at spooking the attacking Israelites; seems they weren't too sure that Yahweh's moxie extended beyond his turf.

Festivals at the solstices and equinoxes are pretty common. By the time the date for Christmas was set, the Julian calendar (that gains 3 days over 400 years on the present Gregorian one) had already made the Winter Solstice come on 25 December. George Washington's birthday in the family Bible was 12 Feb, he made it the 22nd when England adopted the Gregorian calendar. Russia was the last, making the October Revolution occur in November. Had the Church not made the change, Christmas would be occurring in Lent.

You are of course familiar with the Nicean or Apostles' Creed which only makes sense if there were two sabbaths in the same week, which the early church fathers did not realize was really the case. So Good Friday occurred on Wednesday; the three days in question being the Passover Sabbath, a feast of some sort, and the regular Saturday sabbath. This made the tomb-watching required before sealing a tomb a bit difficult (no one wants to bury the living). Whether one believes in a resurrection or not, it is a fair bet that it was a tad after sundown on Saturday when the stone was found to be out of the doorway.

Incidentally, the Eastern and Western Churchs use slightly different formulas for Easter, the Orthodox requiring Easter to follow Passover.

Years started and ended near the equinoxes, days started at sunup or sundown. In fact March 1 was New Years at the time of Washington. Just how in hell did we get started beginning years in the dead of winter and days in the middle of the nite???

One more time with feeling ... the enabling legislation DID NOT
delegate the requirement to make the station available on request to
the locals. Sec. 97.426 applies only to the FCC.

The FCC procedures for inspection (based on relevant case law and
policy) are very specific - a station operator cannot be cited for
refusal to permit an inspection by FCC agents unless the station is
found in operation (residential or business premises) or during
normal business hours (business premises). Even if the inspection
rquirements were delegated to the locals, they would have to follow
these guidelines.

>Now, we could sit here and argue for days whether a device
>attached to a station, along with an interference complaint, is enough
>to prove that the device has been used, but neither of us will be
>certain until a number of these HR-2346 cases are resolved in the courts.

It's already been resolved by the FCC -- it's not. There has to be
proof of use.

That's why, when the station is inspected after delay at the door
and the amp is hidden, the only acceptable FCC power determination
includes one agent inside measuring station power with an in-line
meter and another agent outside observing any changes in the
station antenna orientation and measuring a signal level (usually on
a calibrated field strength meter or spectrum analyzer) to see what,
if any, decrease occurred between the observed transmission and the
transmission under supervision.

>> A charge of "using non-type-accepted equipment"

>
>
> Title 47, Sec. 95.426

The cat chasing its own tail. Failure to make the station
available for inspection is not reasonable cause to require that
inspection. There has to be reasonable cause BEFORE the request
for inspection.

The FCC has no authority to break down the doors, so to speak,
and the locals can't assume that authority in enforcing powers
delegated to them by the FCC.

For any city that tries, I do hope that their coffers include LOTS
of Sect. 1983 (damages for illegal actions under color of authority)
money.

No, Len, that's NOT what happened.

K0HB started this thread with a post about the license totals. Several people, including me, replied to his original post. But nobody replied to my post commenting on K0HB's original post.

Then on April 4 I posted some new numbers, based on a different time frame and a few observations on those numbers. My April 4 post was not a reply to anyone else's post - it stood by itself. Only one paragraph comments on K0HB's post, and that is in the form of an explanation.

Here is my post of April 4, in its entirety.

(begin quote)

Subject: Re: Restructuring -- did it make a difference
From: N2EY
To: rec.radio.amateur.policy
Date: 4/4/01

Here are some numbers from the AH0A website to consider.

From March 31, 2000 to March 31, 2001:

- The total number of US ham licenses rose from 677,784 to 684,359 - a gain of 6,575 (1%)

- The total number of Extras rose from 75,985 to 95,243 - a gain of 19,258 (25.3%)

- The total number of Advanceds dropped from 103,048 to 88,082 - a loss of 14,966 (14.5%)

- The total number of Generals rose from 109,787 to 136,056 - a gain of 26,269 (23.9%)

- The total number of Technician Pluses dropped from 133,688 to 96,145 - a loss of 37,543 (28%) (See discussion)

- The total number of Techncians rose from 204,646 to 224,867 - a gain of 20,221 (9.9%) (See discussion)

- The total number of Novices dropped from 50,630 to 43,966 - a loss of 6,664 (13.1%)

The above totals are for individual licenses. Note that from a percentage viewpoint, the fastest growing class is the Extra, while from a number of licenses viewpoint, the fastest growing class is the General.

Since April 15, 2000, the FCC has renewed all Technician and Technician Plus licenses as Technician. Also, a ham who holds a Technician license and has passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though the database simply shows "Technician" as the license class. There is no easy way to determine exactly how many Techs are actually Techs with HF, because the FCC does not keep that information in its database. A lower bound on this number can be found by adding up the number of Technician renewals from April of 2000 until October of 2000 (3273) This works out to an average of 467 per month, or 5,604 per year, being reclassified from Tech Plus to Tech because of renewal.

There is also no easy way to determine the number of upgrades for most of the classes, because upgrades are recorded as "modifications", just like address or name changes.

The total number of "lots of HF" licenses (General/Advanced/Extra) rose from 288,820 to 319,381 - a gain of 30,561 (10.5%). This is what K0HB is referring to in his post - more hams with lots of HF privileges.

The above figures reflect only one year's change, starting on the eve of restructuring. It will be interesting to see how the trends evolve over longer time frames.

73 de Jim, N2EY

(end quote)

I did not start a new thread because this thread's subject line was just right. You did not like several things I posted, and replied to my April 4 post, criticizing the choice of time interval and other things. I explained my postion, but you kept on criticizing it, adding comments whose logic and facts contained errors. I commented on those errors, but you refuse to admit to them.
>

>>You also derived some numbers by faulty methods. Like your claim of 59
>>Technicians reclassified from Tech Plus.
>
>That was not a "faulty method." The "59" number value was the difference
>between the total number of Technician license class increase in a ten-
>month period and the number of new Technician licenses in the same
>period.

Which is a faulty method because it assumes, among other things, that ALL of the new Tech licenses issued in that ten month period stayed Technicians. Because you didn't have upgrade data available, you ASSUMED that the upgrade number was ZERO for that ten-month period. THAT is a FAULTY METHOD, Len.

KE3Z posted information derived from the FCC database showing that 7079 current Technicians were reclassified from Tech Plus. 7079 is a lot more than 59. And because it is derived from the database directly, it is the most reliable number.

Note that in my original post, I gave a lower bound of 3273 reclassifications.

>That was stated at the beginning of a reply to Miccolis' claims of
>"faulty methods." A difference of numbers, stated as such, is not "faulty"
>unless the arithmetic is faulty.

It's faulty because you use the wrong numbers to begin with, and because you don't consider things like upgrades.

Here's a partial quote from my post of April 13, which explains how off base that 59 number really is:

(begin quote)

>In the ten months from the end of June 2000 to the end of March
>2001 the number of Technician class licensees increased by
>16,029

Let's check that out. AH0A says 208,838 at the end of June 00 and 224,867 at the end of Mar 01. Difference is 16,029. That part you got right.

> but of that, 15,970 were new licensees

No. That's NOT correct.

First off, the number of new Techncian licenses in the period you mentioned is 13,494, not 15,970. This is because the new license total for the period is figured by adding up the monthly new licenses of July 2000 to March 2001. The new licenses issued in June 2000 are already included in the 208,838 total, because those are end of month totals. So you are already off by 2,476.

Second, the situation is more complex than you present. Here's how it works:

There were 208,838 Technician licenses in the database at the end of June 2000. At the end of March 2001 there were 224,867. This increase is equal to the following sum:

(new Techncian licenses)
+ (Technician and Technician Plus licenses renewed in the grace period)
+ (upgrades from Novice)
+ (Technician Plus renewals before expiration)
- (expired Technician licenses)
- (cancelled Technician licenses)
- (upgrades to General or Extra)

You ignore most of those factors and just ASSUME that every new Technician did not upgrade in the ten month period.

> exclusive of any
>upgrading or modification or anything else except being new.

Wrong. See above.

>That leaves a difference of 59 which can be attributed to anything
>other than a new license.

Wrong. See above. You presume that none of the new licensees upgraded in ten months.

> Those 59 MAY include all those
>Tech-Plusses who were automatically "renewed" as Techs, but
>that group only represents 0.37% of the total change.

Nope.

A few days ago it was posted here by Jon Bloom that, in the current database, there were 7079 currently active "T" (Technician) licenses with "P" (Technician Plus) in the "previous license class" field. That's straight data from the FCC database. 7079, not 59. That number is a minimum, because the FCC continues to renew Tech Pluses as Technicians every day.
>
>>SO? The effect is still there.
>
>How BIG of an "effect" did you say it was? :-)

7079 out of 13,494 is a bit more than half.

(end quote)

Really faulty methods there. Len.
>
>The original subject thread began with the effects of restructuring
>following the April 15, 2000, change.

That's true.

> Miccolis tried to use data prior to
>that date to indicate post-restructuring effects.

Nope. I started a whole new subthread. The subject line is "Restructuring -- did it make a difference". Nowhere does that constrain the time period considered. Imminent restructuring caused some hams to get licenses or upgrade BEFORE April 15, 2000, for several reasons.

>That in itself is faulty
>and misleading since it lumped pre- and post-restructuring data
>together instead of making a comparison.

Nope. The time period was clearly spelled out. And the effects of restructuring began before April 15, 2000.
>
>>You also made statements that are clearly incorrect, like Technicians with
>>Element 1 CSCEs having no HF privileges.
>
>No. I said nothing about "Element 1 CSCEs having no HF privileges."

Yes, you did, Len. Here are your exact words:

"Those 15,970 new Technicians still don't have any HF access with/without CSCEs."

Go to Google and look it up.

I have asked you the following question repeatedly, but you avoid answering for some reason. So I ask yet again: If a Technician licensee passes Element 1 and gets a CSCE for it, but does not take any other tests, does that Technician have any HF privileges or not?
>
>Neither did I say anything about "Easter Bunnies" although Miccolis seems
>to claim that I did.
>
Nonsense. I simply pointed out that your belief in something doesn't make it so.
>
>The trend prior to restructuring had new license growth coming from
>the new Technician class licensees. So much growth that it offset
>the attrition from dropping code-tested license classes. The net
>result was a small increase in the number of total ARS licensees.
>That trend continues following the April 15, 2000, date with very
>little change due to Technician Plus renewals shifting to Technician
>license class.

7079 documented reclassifications from Tech Plus to Tech out of about 15,000 total growth in the Tech license class is hardly "very little change".
>
>My only dispute with Hans Brakob's posting was relative to the
>number of radio amateurs with HF privileges.

So?

> I did not observe any
>great change, only a continuation of the trend that had been
>on-going for several years.

> I still hold to that observation regardless
>of allegations of "faulty methods," "errors," or "mistakes" levelled by
>long-timers who seem to wish things were otherwise.

No. You made other statements in response to MY post which clearly contained faulty methods, errors and mistakes. You refuse, for some reason, to examine your mistakes, or admit to them.

Shall I post them AGAIN?

Considering current law:
It's nice that Congress has co-delegated authority over enforcement of
the CB radio service to local law enforcement (upon local laws to fill in the
gaps being created), but the problem is that if the federal regulations continue
to say that inspection need only be granted upon FCC request, there will be no
authority for local law enforcement to act: Without inspection, how can they
legally move upon "probable cause" to the enforcement action. They're barred
from a fundamental step needed in the evidence gathering process.

> Sec. 97.426 applies only to the FCC.

I give up, Phil. We're just going in circles with this. You don't seem to remember what I said two messages ago and I'm tired of repeating everything (only to have you forget what I said that led up to repeating it, which means that I then have to repeat that - starting the whole thing over again). I know you don't like HR-2346 and have convinced yourself it will not work. However, I think your negative feelings about this bill has clouded your judgment. This legislation is now on the books and it is eventually going lead to local legislation and enforcement. And, in spite of your thoughts otherwise, I strongly suspect that enforcement is going to stand up in courts. Of course, like I said earlier (repeating myself once again), we'll just have to wait to see. Take care.

I don't know. There aren't too many "freebanders" running equipment
that expensive. I suspect a list should only include the most common
stuff, not necessarily everything a person could use (a list like that
could go on forever).

> I know plenty of licensed amateurs who own
> Rangers and Lincolns (The latest incarnation
> of the HR-2510) capable of 11 meter transmit.
> My question is are licensed amateurs "exempt"
> from the list?

HR-2346 exempts any person with a license in any radio service. The
FCC will remain the sole enforcement agency when it comes to licensed operators.

> What about an unlicensed person who claims he's
> just SWLing until he gets his ticket? [snip]

As long as he doesn't transmit with it, he has nothing to worry
about (HR-2346 covers operation, not possession).

> Can a ham legally own and use a Texas Star on 10 meters?

Yep, as long as he stays in the ham bands. However, watch out for
stray emissions - some of those home-brew CB linears are fairly dirty.

You're right. And we also love to assign blame today. Few seem to understand that accidents happen all the time, but that does not necessarily mean someone at fault. It reminds me of the woman who sued the city because a tree limb fell on her during a wind storm (the tree was on city property). I cannot imagine how anyone could hold the city responsible for a wind storm or tree limb. However, the court did exactly that - the woman won.

All this debate begs one question.......

What are you all doing to help PROMOTE amateur radio?? (all that may read this)

Pretty soon, I will be posting a list of ideas and suggestions to help promote our hobby to youth, (in this hobby that would be most anyone with the aptitude that is under 30 years of age) that I have collected from hams from postings on QRZ.COM and here in the newsgroups....

Its interesting, but I AM the youngest ham in my county.... and I am going to be 31 in July. Hopefully my efforts of promoting amateur radio to youth (ages 30 and under) will provide to have been useful.

73's to all!

Before I go, let me ask these final questions relating to the probable cause issue, Phil. If, as you say, Sec. 95.426 (inspection of station upon request) does not apply to local enforcement, and probable cause is required before ANY enforcement of HR-2346, why would there be a need for a paragraph (paragraph 7) describing a specific situation where probable cause is required (as if that were the sole exception)? For that matter, if probable cause is required (Sec. 95.426 does not apply), then why would only one paragraph (paragraph 7) mention probable cause?

And, with that, I'll back out and let my involvement in this discussion end with your reply.

Leaving out whatever this thread has been about, who the authors are, etc., etc. Should one presume that it is being suggested we must all be political science majors, have worked in public policy groups, be board approved as an attorney, etc., before we are entitled to have opinions now? In the United States, *experience* is not required for us to vote and have opinions.

It would be difficult to make such a presumption since context is
important to the issue. A man who is not an attorney but who regularly
posts as if he was an expert on law probably will likely not be taken
very seriously. In this case, the man who frequently does so has tried
to link the tragic shoot-down in Peru to morse code testing. He has
proclaimed that bad U.S. policy ties the two issues. He also added his
personal eulogy bemoaning the late missionary radio amateur's denied HF
access in her home country (as if being shot from the sky wasn't enough
of a reason to mourn her).

Anyone in the U.S. is entitled to an opinion--even if it is based on
flawed thinking and lack of information. Those who reach eighteen years
of age may vote. That vote can be cast based on flawed thinking and
lack of information. No one is forced to read a newspaper, a news
magazine or even to watch what passes for news on TV. Those of us who
stayed awake during civics class in school remember that we have the
responsibility to make informed choices. No one forces us to carry out

that responsibility. Stupidity has not been banned so we are also free to make bad or poor choices.

We don't vote on each local, state or national issue. We elect representatives who vote on these for us. So, Kim, you need not be a political science major or graduate nor do you need to be an attorney before holding opinions. You should have some idea of what is going on before you form those opinions.

So, in your comments regarding the thread, do you see a link between morse testing and the death of a missionary woman who happened to hold an amateur radio license? Do you agree or disagree with Larry's attempt to use the issue of the shoot down as a means of delivering additional anti-morse code testing rhetoric?

Think carefully....

>under "backpacking" conditions?

Even under backpacking conditions, SSB can exhibit an excellent S/N margin under some conditions. Under those conditions, SSB is more effective than CW at getting information from point to point. Once the S/N exceeds what is needed, further improvement is moot and the effectiveness of a mode then becomes primarly a function of throughput. Spoken communication is faster than manually sent and decoded OOK Morse CW.

The product has been approved by the FCC; that is why it is being offered for sale. The Product Review didn't get under way until the FCC process was complete.

>The ARRL has so
>strongly influenced the FCC for so long a time and made that
>influence and resulting action clear to so many that the "ARRL
>decisions" are almost a de facto "ruling" of the US amateur
>radio community.

I disagree that the influence of ARRL is best described as "ruling."

>I'm not saying the ARRL is doing a "bad thing" with the above,
>but denial of the most obvious quasi-offialdom of the ARRL for
>decades is somewhat ludicrous.

I would not have disagreed with the detailed explanation you offered, Len; I disagreed with the far-simpler summary that ARRL in any way governs amateur radio. Those governed by law have no reasonable choice but to follow the law; people still have the choice to follow or not follow ARRL's leadership or influence.

Surely you see the difference.

Figures some snot nosed kid would come in and try to tell all the old pros (timers) how to improve! Ryan, don't you know that if they can't come up with it themselves, it can't be done? Besides, if any of your whipper snapper tactics work, they'll all have a touch time trying to agree on what's next on the bitch list! Hey, maybe increase the code requirements!

One of the BEST ways to generate interest is involvement.
We need to expose people to what we do and somehow engage
tjem into our activities.

I've suggested to the ARRL that the Field Day novice/tech
bonus station should be replaced with a third-party station
(operated under similar rules). Intended or not, club focus
upon "points" would encourage more pro-active recruitment
of new people.

Instead of just handing out brochures to our visitors, we
can give them a taste of the fun by getting them involved.

Field day could become even more family oriented by giving
more people a more direct role in the activity.

News coverage would probably be better. I can imagine
getting a newscaster behind one of our microphones for a
longer human interest piece.

We could invite the people we've worked with and helped
throughout the year (law enforcement, Red Cross, Salvation
Army, YMCA, etc...) to come join us in our premiere activity.
What better way to encourage comradiere?

Of course, no single change will generate the total effect
we want, but I feel that this is a step in the right
direction.

>ignore. Just as you continjuously ignore the fact that no one EVER
>attempts to memorize the entire question pool.

EVER? Okay, a handful of people memorize over 1000 questions without understanding. The larger majority do what I did which is to pass their exams with a combination of studying, memorizing, lucky guessing and just plain hoping that some subjects don't appear on their exam.

What is with you and "ignore," Dick? On a number of occasions I have agreed with you that the Extra of your era is exactly as you describe. How is that "ignoring?" Can I assume you play the "ignore" card if you think you are losing the discussion?

What you ignore is the fact that in the days you took that Extra, it was strictly a "vanity" license; the General of that day carried all operating priveleges. That one could pass by studying and memorizing a 16-page study guide.

If we had gone from an exam of 1000 questions to a simple exam that could be passed by studying a 16-page study guide, you would be leading the howls of protest that we had dumbed down Amateur Radio. Would you like to go back to the days when a ham earned the whole ball of wax by studying 16 pages?

My views are as they have always been, the cheaper it gets the less its wanted. Sure it all looks good, but cheap just don't make it better. Amateur radio is almost being offered at a give away and the sales are down. I bet that 1 % percent increase would have been higher if everything was left the way it was.Who said our frequencies will be taken away and all sorts of other bad things are going to happen if the ham radio population does not increase. I think the worst thing that has happened so far is the restucturing. Yup, the left foot gets shot again, ouch! J1

Please, give me an example of a "victimless crime."

You can't use "drugs" because they are not victimless crimes. Someone almost always has to pick up the slack or suffer as a result of someone using and abusing both legal and illegal drugs. Who suffers? Friends, family, co-workers, tax-payers -- the list is pretty long. Friends and family suffer emotionally and/or financially. Co-workers have to take up the slack and tax-payers pay for the so-called "free clinics" where these people generally end up. No I am not for socialized medicine but I think that if someone TRULY can't afford treatment that the government (you, me and the doctors) should pick up the tab.

Given your thinking below I can sneak up behind someone and pick his pocket. No use of force in that interaction so it should be legal right? I do agree with certain aspects of libertarian philosophy. You can't legislate away stupidity for one. But certain laws are to protect the "innocent", for lack of a better term, from the stupidity of others. For instance, in Texas it is illegal for a person under the age of 18 to ride in the back of a pickup truck at speeds in excess of 30MPH. I think it should be illegal period but many disagree. I have witnessed for myself a child cartwheel out of the back of a pickup at 60MPH. The result wasn't pretty. The parents got a slap on the wrist, "child endangerment." A $2000 fine and suspended sentence. What was their crime? They just killed their kid, that's all.

Phil,

I know that many visits to "questionable" stations were done around here
by FCC agents and US Marshals. Is this common practice around the coun-
try? If so, what are the reasons for having them, or other officers,
acompany the agents?

Tnx,

Jerry

No it tells me that He didn't want or need to re-invent the wheel as He created live on this planet. While the parts are not interchangeable the principles behind their operation remain constant from species to species. Just like the engine in my Mercury Villager works basically the same way as the engine in my Model T.

My submission to the newsgroup was not dependent upon topic or credentials. My post to the newsgroup was on the line: "This is most interesting coming from a fellow with little if any experience in either field." It seems that most of your observations above, in direct response to my comment, would agree with my comments. It seems that your admonition (if you will) was more out of emotional response to something you disagreed with. Thank you.

Kim W5TIT

I'm retired and living alone, Kevin. Please explain how me having a
joint alone in the privacy of my own home causes anyone to suffer. When
I was married and living in CA, my wife and I smoked pot regularly. It
enhanced our sex life and contributed to our marital bliss. We were
responsible adults and only smoked it at night after the kids had gone
to bed. Drugs can be used responsibly or irresponsibly, just like guns.

> Given your thinking below I can sneak up behind someone and pick his pocket.
> No use of force in that interaction so it should be legal right?

Of course, that's using force, Kevin. That victim is being forced to
give up his wallet against his will even if he doesn't realize it
until later.

It should be illegal for kids. It should not be illegal for adults. Kids
should be protected from stupid parents. Adults should not be protected
from themselves. Otherwise, someone may force you to get a facelift to
save you from being so ugly.

So when God said he created man in His own image, he was pulling our legs.
I can believe that. I've always thought God had a weird sense of humor.
So did Mark Twain: Why did God design a man to desire all women and barely
be able to satisfy one, then design a women, who could satisfy any number
of men, to desire only one man? From: "Letters to Earth"

I didn't say *all* we did was rote-memorize, Ed. Question is: Would you have
passed without any rote-memorization at all? Careful now, I don't know any
way to know the band edges without simply rote-memorizing them.

I did not say that, Dave. You keep distorting the fact to satify your
conclusion.

I said that it is wrong for miltiary frighter jet to shoot down unarmed
civilian aircraft, and its wrong for communications adminstrations
to impose a Morse code exam requirement that is unnecessary,
bad public policy, and not in conformity with 5 USC 706.

Did your "god" tell you to spell that way ? So a bunch of people are crazy
enough to believe that there is a god ... doesn't make him exist any more
than he ever did.

If one person believes in an invisible being who's all powerful and such he
is crazy ... if a few people do it it's a cult ... if a population does it
its a religion ... why isn't it a population of crazy people ?

Non-sense Dave, I cite a Federal statutes to assert that a
particular ITU and FCC rule are wrong. You have no reply,
except to attack me personally, shows the weakness of
your position.

> In this case, the man who frequently does so has tried
> to link the tragic shoot-down in Peru to morse code testing.

Dave, do you believe that it is a proper US policy to US
military resources to direct foreign warplanes against
suspect civilian aircraft, particularly after the Penagon
warned in 1994 that this had a high risk of killing innocent
people.

> He has proclaimed that bad U.S. policy ties the two issues.

Dave, the United States morse code policy has already changed, and I suspect that the US aerial combat support policy against civilian aircraft will change.

Cecil:

That's very interesting, but not responsive to the question. FM was
never mentioned; SSB and CW were. We're talking about backpacking
with one of those new Yaesu FT-817's or a comparable rig on the HF
bands (yes, I know the thing goes to 450 MHz on all modes). Sooo,
if you have a response that is germane to the discussion at hand,
let's hear it.

Sorry Cecil, you've got the wrong feller. I've never made any claims
linking Morse code proficiency to technical competence, except as
a coincidence. I possess purely AMATEUR technical skills -- and I'm
not so sure I even know what an LSI chip is, except that I think the
acronym means Large Scale Integration and that they combine the
functions of several related systems on a single chip, reducing the
parts count dramatically in devices like cell phones, 2-meter HT's,
and mousetraps. I'm sure that 5 LSI chips may be two or three more
than I need, if I knew what kind to get and what to do with them.
However, I don't need anyone to show me how to program the
memory channels in my HT -- because that is covered in the owner's
manual, which I can read and understand without the assistance of
an "Elmer." I can also have a CW QSO at 20 WPM, a PSK31 QSO
at 60 WPM, and a RTTY QSO also at 60 WPM -- all within a few
minutes of each other and using less than 25 watts of power into the
indoor dipole I use from my 3rd floor apartment. Now that's *real
ham* stuff in action!

I rate Tim McVeigh on the same level as Lee Harvey Oswell. He is no more than a government scape goat. I don't believe for one minute that a truck bomb cause that much damage to that building. Why were all the other government employees in the building and not one FBI agent or ATF terriost in the building at the time of the explosion? How come there was no other devastation to surrounding buildings. Mighty big explosion to take down a whole building and just that one. There where reports of other charges in the building then nothing else heard about them (one way or another). I do believe that there was a truck bomb and the government terrorists new it was coming. I don't think that that truck bomb could of caused that much damage. What about the rumors about the the no longer need for the ATF? Could this be the way to save a no longer needed government terrorist agency? Why was the building so quickly removed? I would of liked to see more investagation of the way the building came down.
Yes people died I wonder how many lives where saved by this dastardly deed. In standoffs with the United States terrorists (FBI, ATF, DEA) since the building was blown up the government has been less likely to use deadly force like Ruby ridge and WACO! Its funny how people don't remember the stand off in Montana weeks after the bombing. Nobody was killed. Thus the press doesn't have a field day with and thus we the American (sheep) public don't remember or even know about it. To the people in OK I'm sorry that you have lost loved ones and I'm sorry that April 14 is such a bad day for that part of the nation but the death of Tim McVeigh isn't the end of this and isn't true justice. To put it in a nutshell I don't beleive for one minute that his bomb did that much damage (it was a inside job)!
This is my opinion.

In article <20010429003757.12553.00000861@nso-ck.aol.com>, n2ey@aol.com (N2EY) writes another episode in another Endless Story:

<snip>

>>That was not a "faulty method." The "59" number value was the difference
>>between the total number of Technician license class increase in a ten-
>>month period and the number of new Technician licenses in the same
>>period.
>
>Which is a faulty method because it assumes, among other things, that ALL of
>the new Tech licenses issued in that ten month period stayed Technicians.
>Because you didn't have upgrade data available, you ASSUMED that the upgrade
>number was ZERO for that ten-month period. THAT is a FAULTY METHOD, Len.

I "assumed" nothing. I took the difference between the total number of Technician class licensees' increase and the number of NEW Technician class licenses granted came out to be 59. That was what I said. Simple artithmetic and a functioning calculator aren't "faulty."

What I see is just a lot of wordage (and considerable propaganda and/or psywar tactics in newsgroups) to somehow "prove" that that, indirectly, morse-code-tested radio amateurs are flocking to HF as originally claimed. :-)

>KE3Z posted information derived from the FCC database showing

Directly from the FCC database?!? That database is about 55 MB in size. What was the search program? Does it adequately handle the differences between the old FCC database and the new ULS database?

Seems to me it is easier to use Joe Speroni's tabulations.

<snip to the ending...>

>> I still hold to that observation regardless
>>of allegations of "faulty methods," "errors," or "mistakes" levelled by
>>long-timers who seem to wish things were otherwise.
>
>No. You made other statements in response to MY post which clearly contained
>faulty methods, errors and mistakes. You refuse, for some reason, to examine
>your mistakes, or admit to them.

God forbid I should ever respond to YOUR postings? :-)

I explained my method of arriving at an observation, gave the numbers. Nobody disagreed with the numbers, therefore the arithmetic seems to have met with approval.

I used a post-restructuring period (past April 15, 2000) for the reasons given. Miccolis used PRE-restructuring numbers. Is pre-restructuring data a "correct" method for post-restructuring observation?. I don't think so. Miccolis' mileage varies...

The only significant change in US amateur radio licensing in the POST-restructuring period to me is a number of already-licensed amateurs got "higher" class licenses. The NEW, never-had-a-ham-license-before, not-code-tested Technician class licensees are still on the increase as they were before April 15, 2000. At the end of May at least one out of three US amateur radio licensees will be a Technician class (they are just shy of that at the end of March 2001).

>Shall I post them AGAIN?

Knock yourself out... :-)

>>radio community.
>
>I disagree that the influence of ARRL is best described as "ruling."

Please note words I used such as "almost," "de facto," and
in putting the word "ruling" in quotation marks.

Sorry to disagree, but the ARRL influence on the US amateur
radio community up to roughly 5 to 10 years ago was so strong
that it virtually "ruled" the ethics, procedures, and some
activities of that group. It was a de facto "rule" but not a
de jure rule. The FCC does the de jure rule part.

>>I'm not saying the ARRL is doing a "bad thing" with the above,
>>but denial of the most obvious quasi-offialdom of the ARRL for
>>decades is somewhat ludicrous.
>
>I would not have disagreed with the detailed explanation you offered, Len; I
>disagreed with the far-simpler summary that ARRL in any way governs amateur
>radio. Those governed by law have no reasonable choice but to follow the
>law; people still have the choice to follow or not follow ARRL's leadership or
>influence.

People have been turned away from the ARRL through many
factors: The patronizing, implicit "we know what is best for you"
attitudes (aka "Big Brother" or "1984" syndrome); constant
bombardment of viewers/readers of ARRL text seeing the self-
promotions (the "PBS pledging/membership" syndrome); at
least a decade's worth of League Positions on FCC NPRMs
(affecting amateurs) which were either dismissed or only
partially adopted followed by ARRL publicity endorsing the
changes post-facto as if they were "right" before the fact.

In June of 2000 the ARRL membership was only 23.9% of all
licensed US radio amateurs. It could be more if the hierarchy
would adopt some better "selling" techniques, get out of the
eastern conservative environment more, recognize the rest of

the radio world (beyond amateur activities) and admit that the ARRL is not infallible in Setting Policy for radio amateurs. One thing that could be toned down the continued reliance on "the past as prologue" of somehow being the bedrock for what is "good" in US amateur ethics (and even morals) and recognize that the whole of the radio world has changed and advanced despite all the "pioneering" done so many generations in the past. History is nostalgic and interesting but it is still history, something that happened long ago.

Hiram Percy Maxim was the first ARRL President and continued in that post for 22 years until 1936. During that time there was a great deal of radio pioneering done in and by the non-amateur radio world. From 1914 until into the 1960s there were several amateur radio organizations but the ARRL was the survivor. Was that due to some (mythical or mystical) qualities of leadership or was it due more to a constant self-promotional propaganda using its publishing arm to persuade membership? I'll let someone outside the ARRL determine that although it seems clear which one it was to me.

Doing as Carroll has done, to "call on (the spirit of HPM) to provide leadership" in this time looks more like a self-enobling effort to retain conservative amateur ethics of a past era. It is no different than in other newsgroups using the first USA leaders (the "founding fathers") as some kind of idealistic role-model to "prove" the users' viewpoint. Such is nonsense and mythos, the effort more spite expressed because others will not accept his particular viewpoints.

This is the new millenium, radio is 105 years old, the center of population of the USA is _west_ of the Mississippi, there are far more non-CB radios than there are amateur radios, the design center for amateur radios is in Asia and not centered around Chicago or Iowa, communication satellites have long since proven their independence of the ionosphere, mainframe computers of the 1970s have been made antiques by desktop and portable computers purchaseable in chain stores...and some still yearn for the "simplicity" of the 1930s and some imaginary gifts of "leadership" of long ago...and one organization cannot recognize itself when viewed from the outside.

>Surely you see the difference.

Between 2001 and 1936? Absolutely.

Please don't call me Surely. :-)

And TV's, Larry. Modern TV's are chock full of LSI chips and I don't
think you can make ham radios out of them.

No, you have it ass backward as usual Lenny, it's the success of the
817 which is apparently luring a noticeable number of ops into running
cw who don't normally run the mode.
>
>It is all-mode (allocated) and
>works all the way up to 70 cm (missing the 220 band) but is only
>5 W maximum PEP. It is advertised as a "back-packer" sort of

>And why?
>
Hey Lenny, remind me sometime to get you up to speed on the realities
of advertising. I venture to guess that 99% of the 817s sold never get
anywhere near the trails. To answer the core question five watt radios
don't squirt much of a signal on the HF bands so cw is preferable to
the other modes for blatently obvious reasons.
>
>The FT-817 won't fit into a shirt pocket but maybe a coat pocket.

Yup. Go to some of their fringe web sites. Some of them have encrypted home pages. Need the code and the key just to log in. Nothing new here. What you got is probably a reference to a decryption of a packet radio signal. Or someone is jerking the NSA's chain. ;)

Are you nut bags magnetically attracted or something? You certainly come out of the wood work when one of your fellow mentally deficient somewhat humans say something stupid.

Think of it this way, they LEVEL buildings with far less explosive than what he was believed to have in the truck.

There was video proof of him driving the truck that was known to be the point of the blast.

He had receipts for the deisel and fertiliser, not to mention he was in possesion of other bomb making materials when he was picked up.

Did you think that perhaps there wasn't an ATF or FBI office in the building?

And all that aside, he admitted to the bombing!

> > the loser city/county/state pay attorney's fees. And I won't come
> > cheap......
>
> Section 1983? What is the CFR or USC cite?

The full cite is "42 USC 1983" - which is the right of a citizen (or other person) to recover civil damages against a government entity for the infringement of one or more Constitutional rights on account of malice or extreme negligence by that entity in not preventing the rights violation while carrying out some other duty. Usually the violation comes about by a policy, custom, or usage which does not sufficently protect the right, including a specific failure to train the government entity's personnel regarding law, regulation, or criminal procedure, or intentionally training them in a procedure which regularly violates a right.

Feel free to read the actual text of the statute for the proper legal definitions, etc.....

A real example would be that of a city attorney simply sending notice of a criminal misdeameanor filing to the defendant, using regular U.S. mail to an address for the defendant supplied by the alleged victim without any step to actually ascertain that the address used does in fact pertain to the defendant. In addition to being defective process service (i.e. no proof of delivery), should the address be incorrect, it violates the defendant's Sixth Amendment right of notification ("nature and cause of the accusation") should a subsequent bench warrant for "failure to appear" be issued.

[The real case I am thinking of resulted in an immediate dismissal with prejudice once the defendant had been made aware some 3 years later of the complaint. Since misdeameanor complaints only have a 120 period of limitations

for service in the State involved, the "speedy trial" and many other violations occurred as well.]

In the radio context, a problem would be an improper seizure of equipment (e.g. a 10m rig possessed by a licensed amateur) under this "local CB enforcement authority" because the local cop was never trained on the difference, or was trained and simply didn't care (the latter being a stronger case).

In reality, it is perfectly legal to OWN a 10m rig without being
an amatuer. Many of us did so before we actually were
licensed. The issue, as always, comes back to USE (i.e. operation).
Simple possession of a "legal" ham rig wouldn't stand up in
court without concurrant USE of that rig as an illegal
CB operator.

In our far distant past, hams were focused on being able to design and build equipment using the technology of the day. If Larry, our most elite, has lost that ability, are we all doomed to obscurity?

If there was a 1% increase, sales are up, Jim, not down.

The record does not support your conclusion. Prior to restructuring, there has been about a 0.5% decrease in the number of hams. If you could see a 1% increase as "sales are down," then you can imagine the "precipitous drop" that was forcast by some with that 0.5% decrease. :-)

You mean several of "them," don't you, Dick? I believe that people passed their exams by a combination of studying, memorizing, lucky guessing and just plain hoping that a few subjects did not appear on their exam.

Did you really mean me when you used the term "severall of you?" If so, was your misuse accidental, deliberate or did you really see only the word memorizing when you have read the several times I have had to repost my views to clarify them to you?

And when was the last time the police kicked in your door and busted you for smoking a "joint," Cecil? If that were the end of the story, I don't think a soul in the world would care. However, the drug problem doesn't end with just that "joint" in the home. For example, somebody had to transport that drug for you to smoke - and we all know the problems associated with the illegal drug trade. Likewise, for every person you can show who uses drugs as responsibly as you claim, I can show ten others who have not - our jails are full of them (so your example of responsible drug use is certainly not at all the norm).

By the way, when your said that "drugs [plural] can be used responsibly," are you saying that all drugs can be used responsibly, or just the one drug used in your example? I've noticed in previous discussions that you like to offer only one example (marijuana) when advocating the legalization of plural drugs. If your intent is to advocate the legalization of plural drugs, lets get off this marijuana smoke-screen and talk about the more serious drugs. For example, I'd really love to see you explain how crack, cocaine, or heroin, can be used responsibly.

Anyway, back to your comments. Why would one want to use marijuana to enhance sex life for marital bliss? Almost any man should be able to keep a wife happy without first using drugs to mess up her mind. And how can you say that you used marijuana responsibly when you used that illegal drug with children in your home - children who would have lost their mother and father if that illegal activity resulted in a

jail sentence? Doesn't sound even remotely responsible to me.

I found little in your comment to agree with since it consisted mostly
of a question. Certainly your post addressed the material concerning
credentials because you questioned whether specific credentials should
be required.

Let's see if we happen to be in agreement. Would you agree to the
statement, "Larry Klose has no experience as an attorney, no experience
in the formulation of U.S. foreign or domestic policy and little
experience as a radio amateur."?

That's a Catch-22, Dwight. "Bad things might happen because it is
illegal." Sounds like "1984" to me. You could argue that the alcohol
problem doesn't end with just that drink in the home.

Just because someone may use a gun irresponsibly is not a good reason
to take away my guns.

Just because someone may use marijuana irresponsibly is not a good
reason to take away my marijuana.

Those two arguments are conceptually identical.

> By the way, when your said that "drugs [plural] can be used

I talk about my experiences, Dwight. I've never used crack or heroin.
But, when I was younger, half of Silicon Valley used cocaine. I used
it responsibly. I knew it was addictive so I didn't use it often enough
to become addicted. What do you think the world did before cocaine was
made illegal? Coca Cola once contained cocaine. Education, knowledge,
and treatment are the keys to the drug problem, not the war on drugs
which has turned out to be a war on private citizens.

> And how can you say that you used marijuana responsibly when you used
> that illegal drug with children in your home - children who would have
> lost their mother and father if that illegal activity resulted in a
> jail sentence? Doesn't sound even remotely responsible to me.

Again, just because unfair laws exist doesn't make it right. There is
wholesale violation of the drug laws and citizens are losing respect
for the government that is enforcing them. Most of my friends at all the
CA companies I worked for used illegal drugs. Do you avoid oral sex
with your wife just because it is illegal? Do you teach your kids

that missionary style is the only proper position for sex?

The purpose of the drug laws is not to keep people from using drugs.
Their purpose is power, control, and confiscation of private property.
If we don't stand up for our rights, we are going to lose them.

>There are no state militias, there are only "paramilitary organizations"
>that claim to be state militias.

I beg to differ. Please refer to "www.sgaus.org." This is the site for
the State Guard Association of the United States.

Many states (of which Tennessee is one) have state militias such as the
"Tennessee State Guard", "Georgia Defense Force", etc, that are LEGALLY
CHARTERED state militias and organized under the authority of the Adjutant
General of the various states.

These organizations recognize the Governor as the Commander in Chief of
thier specific organization, have NO federal role, and may not be deployed or
mustered as federal units, and comply with the various orders and regulations
of the parent force, usually the National Guard.

They are the ONLY legal "militias" in the United States, unless you care
to also count the United States Coast Guard Auxiliary and the United States Air
Force Auxiliary (CAP) as part of those organizations. Both are "paramilitary"
organizations, but DO have a federal role and are under the control of the
parent organization. (USCG and USAF)

Neither. That particular expression is one of the more inert ones I've seen used here. Now if on the other hand he had called you a doofus, then that would have made me really mad. :-)

Standard tort law - a property owner has a duty of care toward passersby or persons on the property - lawfully or otherwise - to maintain the trees in such condition that a wind storm would not break off a limb and cause injury.

This is the kind of case that everyone studies in first-year law school.

(I'm surprised that the city didn't settle outright - that's why cities carry insurance. Perhaps the amount of the claim was outrageous and therefore the city litigated THAT issue.)

No kidding. You asked for an example. The law (HR-2346) makes USE illegal.
My example intentionally showed a misapplication of the law because you asked
what would constitute a violation that leads to a 42 USC 1983 suit.....
Clearly, the cop in my example disregarded what the law said ("illegal use" and
"FCC licenseholders exempt") and acted anyway.

I disagree. It is an amateur issue should an amateur be "misclassified" as a CB'er and [improperly] subjected to the law. That's why some of us are bitching about it. The average person doesn't know the difference. It gets worse when considering that there is an overlap of equipment used in both services.

Agreed! This is one of the main reasons for the hostility some amateurs display towards CBers.

> That's why some of us are
>bitching
>about it. The average person doesn't know the difference.

A problem the amateur radio service has suffered from for more than 30 years. The general public does not think more highly of radio amateurs because of this confusion.

> It gets worse
>when
>considering that there is an overlap of equipment used in both services.
>
Except for antennas, transmission lines and power supplies, what equipment is used in both services? CB equipment must be type accepted for that service. Modifying it for ham use means it is no longer cb gear.

N2EY says:

>Agreed! This is one of the main reasons for the hostility some amateurs display
>towards CBers.

Why would an amateur give a rip about what CBers do? I couldn't care less,
just as I don't care what FRS or GMRS or any other xxRS does. It's the
FCC's job to take care of, not mine, not the local deputy Barney Fife, nor
the USCG Auxiliary.

The U S Marshal Service, not the FCC, executes Federal court
orders (warrants for search, seizure, or arrest).

The function of FCC agents is to advise the Marshals what
equipment is to be seized in accordance with a search and
seizure warrant. The Marshals can request assistance from other
Federal or local law enforcement officers at their discretion.

The reason for the Finegold Bill was that there weren't enough
FCC agents to go around. If there are FCC agents on scene, why
have the local law accompany them except to "keep the peace" while
the FCC agents do their job??

On Mon, 30 Apr 2001 03:43:55 GMT, Bill Sohl wrote:

>>The attorneys at the FCC who helped to write HR-2346 were wrong.

The only function of the attorney at the FCC (with whom I have
been on a first name basis for over 20 years) was to make sure
that the FCC wasn't being stabbed in the back too badly by this
dilution of jurisdiction (so he told me).

>>The attorneys on capital hill who sponsored the bill were wrong.

The only consideration of the above was to mollify the good burghers
of Beloit, Wisconsin who badgered Sen. Finegold until he put the
original bill in. The rest of the process was the usual "you
co-sponsor mine, I'll co-sponsor yours" bill-rolling.

(And after all the hoopla, why hasn't Beloit passed a local
ordinance??)

>>The attorneys on capital hill who voted to pass the bill were wrong.

Members of The Congress know not and care less about CB
enforcement, which to them has less importance than does
cleaning the manhole covers in a Federal parking lot. Those
who did even look at it saw it from the "enlightened" standpoint
of "good, they can do the work and we won't have to pay for
it".

>>The attorneys who handed the bill to the president to sign were wrong.

IIRC that sort of work is done by a clerk who is performing a
ministerial act, i.e. one mandated by law or procedure with no
discretion or initiative required.

All of that effort was a complete waste
>>of time - the new law is absolutely unenforceable.

OOK CW is simpler technology. It was the simplest mode for radio way back in time. What is it about that that is so hard to understand?

>>I'm puzzled by the "scads of ops back into cw" as the "reason"
>>(implied) for the FT-817's success.
>>
>No, you have it ass backward as usual Lenny, it's the success of the
>817 which is apparently luring a noticeable number of ops into running
>cw who don't normally run the mode.

So, a wideband, ALL-MODE, portable transceiver "lures CW ops?"

There should be all sorts of QRP radios out there that feature CW at slightly less price. Why aren't those more attractive to CW ops?

>Hey Lenny, remind me sometime to get you up to speed on the realities
>of advertising. I venture to guess that 99% of the 817s sold never get
>anywhere near the trails.

Of course. There are very few SUVs on the road today that are used off-road. (a non-radio analogy)

On the other hand, the Stoner Goral Company has sold a number of little transceivers to private maritime users as well as amateurs. Elecraft sells some nice little transceivers are comparable and lower prices, too.

Since CW is primarily a mode used on HF by amateurs, why is there a "reason" that CW ops would flock to an HF-VHF-UHF ALL-mode, low-power transceiver? Why wouldn't they flock to an HF-only transceiver?

>To answer the core question five watt radios
>don't squirt much of a signal on the HF bands so cw is preferable to

>the other modes for blatently obvious reasons.

Heh. Better check out the specs for the SGC products then.
:-)

>>The FT-817 won't fit into a shirt pocket but maybe a coat pocket.
>>Hopefull two pockets on the coat since the other pocket has to
>>hold the key and antenna wire. [it is 5.3"W x 1.5"H x 6.5"D]
>>
>. . . I have a couple two-pocket Eddie Bauer denim shirts . .

Don't all CW ops have brand name shirts with big pockets?
:-)

>>Was this all-mode, "all-band," portability state of the art in 1956?
>>If so, or not, how did such technology affect standards and
>>practices of that time, a whole generation after Maxim's demise?
>>
>Beats me, why would anybody care Lenny??

Dick Carroll seems to care a lot. He wants "leadership" a la HPM
style when HPM led only from 1914 to 1936. Was there a lot of
technology in radio back then compared to now? Were there a
lot of modes, bandplans, standards and conventions then as
compared to now?

Seems like the "standard" response from "CW ops" is that
"return to yester-year" nostalgia when life was simpler, more
straightforward, fewer options, and everyone was "in their
place" following those who "knew better." As expected, I got
one of those "replies." :-)

Shall I save some tuna tins for you, Brian? I can throw in a
couple of 2N2218s and a color burst crystal. You can use
those in a high-tech added-doubler-stage to be rockbound
on 40m at 7159 MHz. :-)

Oh, I dunno. Depends on their perspective and values and what they want out of ham radio. "Bout a year or so ago we had a 13-year-old in the neighborhood who decided he'd rather have a 20wpm Extra ticket than a 5wpm Extra ticket so he scambled to get his code speed up to 20wpm thus he beat the April 15 date by a couple months.

Sorry if I wasn't clear, Hans. What I was referring to is the fact that the ARS and cb get mixed up in many folks' minds. For example, hams sometimes get blamed for RFI caused by cb and freeband types.

> I couldn't care less,
>just as I don't care what FRS or GMRS or any other xxRS does.

Me, neither - until the users of another radio service tear up the neighborhood's TVs and hams get blamed for it. Or the regs for the ARS are made increasingly restrictive because of the violations done by non-hams. Stuff like that.

I don't care what happens on other services' channels as long as it stays there and doesn't affect ham radio.

> It's the
>FCC's job to take care of, not mine, not the local deputy Barney Fife, nor
>the USCG Auxiliary.

Agreed!

All absolutely correct. You see Rob, some of these guys here see
McVeigh as being their avenger for Waco. He is their hero, and they
don't want to see anything bad happen to him.

"I ask, Who are the Militia? They consist now of
the whole people, except a few public officers."

- George Masson, June 1788 at the Virginia
convention to ratify the U.S. Constitution.

The state of Georgia maintains a LEGALLY
CHARTERED State Defense Force, which is NOT
subject to federal control or federalizaton. While federal
bureaucrats conveniently ignore the Second and Tenth
Amendments, they ARE still part of the U.S. Constitution.
The Founding Fathers, should they return today, would
be nauseated at the present day power of the federal
government.....something NEVER intended under any
circumstance NOR allowed by a literal reading of the
U.S. Constitution.

Keep your powder dry.

And it's that "ignore it, it will go away" attitude that allows problems
like this to fester. The less INFORMED citizens squawk about it, the more the
lawbreakers like it. And the LESS likely the Feds are to do anything about it.

>Subject: HR-2346
>From: K0HB k0hb@qwest.net

>HR-2346 is a CB issue, not a ham radio issue.

This is a self-deluding attitude. Millions of citizens think Ham is CB and vice/versa. It IS our business when THIER lawlessness impacts MY ability to operate.

How does THIER actions impact me?

(1) The average citizen doesn't know the difference between "Ham" and "CB".

(2) Same Ignorant Citizen winds up watching hashbars and listening to "Whiskey Ridge Runner" calling "Hellloooooooo Skiiiiiiiipland" in the last 30 seconds of a hotly contested sporting event on which he has a bet riding. The score is too close to call.

(3) Disgusted with attempts to get his CB'ing neighbor to lay off, he hit's up the local city council to enact legislation to bar towers and antennas. Since Ignorant Citizen is also the well-know publisher of a local newspaper, they act quickly.

(4) Local Amatuer Radio operators find themselves now fighting City Hall when trying to get a tower installed.

(5) Tired with being ignored or blown off with excuses of "no money for enforcement" by the FCC, the local politicos approach Senator Chestbeater and encourage him to stop the gross abuse of privacy and "domestic tranqulity" and enact legislation to allow local cops and deputy sheriff's the power to enforce certain parts of FCC Rules and Regulations.

(6) Now entrusted with new Congressionally-granted powers, local law enforcement acts quickly to overcome other negative media by ridding thier peaceful neighborhoods of illegal radio operators. Despite caveats of "....except Amateur Radio operators" having been written into that new law, local cops arrest dozens of legal operators and/or confiscate tons of privately owned two-way radio equipment. Local Hams and all three of the local LEGAL CBers are now having to spend hundreds if not thousands of dollars in legal fees to get thier gear UNconfiscated and get back on the air.

All of this was avoidable with a little prevention in the beginning.

>Would all you CB-lawyer-wannabes take this cluster-phuck over to
>rec.radio.CB.whatever.

The EPA is gonna catch up to you sooner or later, Hans.

Kim,

The Gospel According Dave would have you believe that:
(a) no citizens can petition an administrative agency alleging
that a rule is unnecessary, bad public policy, and not in
conformity with law, unless they are attorney; and,
(b) no citizens can oppose the use of military force
against civilian aircraft unless they have experience
formulation U.S. foreign or domestic policy; and,
(c) and most importantly, no citizen can oppose
47 CFR 97.503(a) unless they have passed the
code exam.

How's this for conspiracies? Some of these kooks claim that at the time of his arrest, McVeigh shouted out to reporters that the government put a chip in his butt. That's why he planted the bomb.

My sides hurt for a week from laughing at that one.

Exceptions are everywhere. I doubt, however, that this 13-year-old represents
any majority.
